

Brad Cogburn
Mrs. Harsley

There are some things in life that are worth saving. One thing that is in great need of our help is our planet earth. If we only take from and use up the resources that our planet provide and never conserve, replace or restore those resource, we will use them all up. We can help save our earth by recycle, reusing, and reducing.

Recycling is the process of taking a used product and making it into another new product. Recycling is easy. I recycle at my house by saving aluminum soda cans when they are empty. This helps to cut down on the amount of trash that goes into our dumps and also puts a little cash back into my pocket.

Reusing is the recovery of material and precuts for the same or a similar en use. For example, instead of throwing a Wal-Mart bag into the trashcan you can reuse it to carry other items at a later time. Many common household items that can be reused are aluminum foil, Ziploc bags, butter tubs, and newspapers.

Reducing is to make something smaller or use less resulting in a smaller amount of waste. This is really easy to do, just buy and use less. Buy only what you need and use all of what you buy. If you don't use all of something, you can give it to someone else who can use it.

We only get one Earth so we have to take care of it. I am going to talk to my family and friends about helping me, save our planet. So what do you say? Will you help too?
