4. CERTIFICATION .................................................................................................................................................................. 2
1 INTRODUCTION

The purpose of this liner design criteria evaluation is to document that the requirements specified in 40 CFR §257.71(a)(1) have been evaluated to support the liner certification for the Zimmer Power Station Coal Pile Runoff Pond, an existing CCR surface impoundment as defined under 40 CFR §257.53.

Owners or operators of existing CCR surface impoundments must document, by October 17, 2016, whether or not such units were constructed with a liner meeting any one of the following criteria as defined in 40 CFR §257.71(a)(1):

(i) A liner consisting of a minimum of two feet of compacted soil with a hydraulic conductivity of no more than \(1 \times 10^{-7}\) cm/sec;

(ii) A composite liner that meets the requirements of §257.70(b); or

(iii) An alternative composite liner that meets the requirements of §257.70(c).

In accordance with §257.71(a)(3), if the CCR unit was not constructed with a liner that meets the requirements of §257.71(a)(1)(i), (ii) or (iii) as listed above, it will be considered an existing unlined CCR surface impoundment.

2 LINER EVALUATION

Based on the evaluation of design drawings and available construction records, the Coal Pile Runoff Pond was constructed with a liner system designed to comply with Ohio Environmental Protection Agency rules for solid waste landfills. Specifically, the Coal Pile Runoff Pond has a compacted soil liner that is present underneath the entire footprint of the pond. The liner system includes a 3-foot thick layer of compacted clay. However, construction records were not available to determine the in-situ hydraulic conductivity. Therefore, the Coal Pile Runoff Pond cannot be certified as meeting the §257.71(a)(1) criteria for a lined impoundment.

3 CONCLUSION

The Coal Pile Runoff Pond at the Zimmer Power Station was evaluated relative to the USEPA CCR Rule requirements for liner design certification for an existing CCR surface impoundment (§257.71(a)(1)). Based on the evaluation presented herein, the Coal Pile Runoff Pond was not constructed with a liner that meets the design criteria specified in §257.71(a)(1).
4 CERTIFICATION

Certification Statement 40 CFR § 257.71(b) – Liner Design Criteria for an Existing CCR Surface Impoundment

CCR Unit: Zimmer Coal Runoff Pond

I, Victor Modeer, being a Registered Professional Engineer in good standing in the State of Ohio, do hereby certify, to the best of my knowledge, information, and belief that the information contained in this certification has been prepared in accordance with the accepted practice of engineering. I certify, for the above-referenced CCR Unit, that the documentation as to whether the CCR Unit meets the requirements of 40 CFR § 257.71(a) is accurate.
