LICENSED PROFESSIONAL CERTIFICATIONS

40 C.F.R. § 257.91(f) Groundwater Monitoring System Certification

In accordance with Title 40 of the Code of Federal Regulations (40 C.F.R.), Part 257, Subpart D, Section (§) 257.91(f) the owner or operator of a coal combustion residuals (CCR) unit must obtain certification from a qualified professional engineer stating that the groundwater monitoring system at the CCR unit has been designed and constructed to meet the requirements of 40 C.F.R. § 257.91. If the groundwater monitoring system includes the minimum number of monitoring wells specified in 40 C.F.R. § 257.91(c)(1), the certification must document the basis supporting use of the minimum number of monitoring wells. Further, in accordance with 40 C.F.R. § 257.91(e)(1), when completing the groundwater monitoring system certification, the qualified professional engineer must be given access to documentation regarding the design, installation, development, and decommissioning of any monitoring wells, piezometers, and other measurement, sampling, and analytical devices.

The groundwater monitoring system designed and constructed for the Hennepin Power Plant (HPP) East Ash Pond (EAP) includes more than the minimum number of wells specified in 40 C.F.R. § 257.91(c)(1). The undersigned has been given access to documentation regarding the design, installation, development, and decommissioning of monitoring wells, piezometers and other measurement, sampling, and analytical devices concerning the HPP EAP.

eric J. TLACP 062-063 I, Eric J. Tlachac, a qualified professional engineer in good standing in the State of Illinois, certify that the groundwater monitoring system at the HPP EAP has been designed and constructed to meet the requirements of 40 C.F.R. § 257.91.

1. INTRODUCTION

1.1 Overview

Ramboll Americas Engineering Solutions, Inc. (Ramboll) has prepared this Groundwater Monitoring Plan (GMP) on behalf of HPP, operated by Dynegy Midwest Generation, LLC (DMG) to align the 40 C.F.R. § 257 compliance groundwater monitoring program with the Title 35 of the Illinois Administrative Code (35 I.A.C.) § 845 compliance groundwater monitoring program.

This GMP applies specifically to the CCR unit referred to as the EAP (CCR unit identification [ID] Number [No.] 803, Illinois Environmental Protection Agency [IEPA] ID No. W1550100002-05, and National Inventory of Dams [NID] No. IL50363). The EAP is a lined, 21-acre surface impoundment (SI) used to manage CCR and non-CCR waste streams at the HPP. This GMP includes content requirements specific to 40 C.F.R. § 257.91 (Groundwater Monitoring Systems), 40 C.F.R. § 257.93 (Groundwater Sampling and Analysis Requirements), 40 C.F.R. § 257.94 (Detection Monitoring Program), and 40 C.F.R. § 257.95 (Assessment Monitoring Program) for the EAP at HPP.

1.2 Site Location and Background

The EAP is located in northcentral Illinois in Putnam County, approximately four miles northeast of the Village of Hennepin, located within the northeast quarter of Section 26, Township 33 North, Range 2 West (**Figure 1-1**). The HPP is an approximately 504-acre property consisting of 19 parcels, including a retired coal-fired power plant, CCR landfill and SIs, and farmland. The HPP ceased operations in 2019.

The HPP construction history includes construction of Unit 1 in 1953 and Unit 2 in 1959 with capacities of 70 megawatts (MW) and 210 MW, respectively. The plant initially burned high-sulfur Illinois coal and switched to sub-bituminous Powder River Basin coal in 1999 (Science and Technology Management, Inc. [STMI], 1996).

The three CCR units located adjacent to, or in the vicinity of, each other in the eastern portion of the HPP are referred to as the East Ash Pond System (EAPS). The CCR units associated with the EAPS are situated south and adjacent to the Illinois River. The area is also bounded to the east and south by industrial properties owned by Tri-Con Materials and Washington Mills, respectively (**Figure 1-2**). The HPP provides the western boundary for the CCR units with agricultural land to the southwest. Additionally, a 9-acre parcel between the HPP property and Washington Mills (south of the CCR units) was previously occupied by American Asphalt but they are no longer actively operating this facility, and the property contains several abandoned buildings. The current owner of this parcel is listed as Tri-Con Materials.

Figure 1-2 depicts the location of the CCR units and non-CCR units within the EAPS. The four EAPS CCR units consist of the following:

- Coal Combustion Waste Landfill (CCWL; Vistra ID No. 801)
- EAP
- Closed (with IEPA approval) Ash Pond No. 2 (AP2; Vistra ID No. 802, IEPA ID No. W1550100002-04, and NID No. IL50663)

FINAL GMP HEN EAP.docx 7/19

Closed (with IEPA approval) Ash Pond No. 4 (AP4; Vistra ID No. 805 and IEPA ID No. W1550100002-07).

Information regarding the CCWL, AP2, and AP4 CCR units is solely for background information, as this GMP applies specifically to the EAP CCR unit, which will hereinafter be referred to as the Site.

1.3 Conceptual Site Model

Multiple site investigations have been completed at the HPP to characterize the geology, hydrogeology, and groundwater quality as required by 40 C.F.R. § 257.91 (Groundwater Monitoring Systems). The EAP has been well characterized and detailed in the Hydrogeologic Site Characterization Report (HCR) (Ramboll, 2021) [https://www.luminant.com/ccr/illinois-ccr/?dir=il-ccr%2FHennepin%2F2021], that was included with the Operating Permit application submitted to the IEPA. The HCR was prepared to comply with the requirements specified in 35 I.A.C. § 845.620 and expands upon the Hydrogeologic Monitoring Plan (Natural Resource Technology, an OBG Company [NRT/OBG], 2017). A conceptual site model (CSM) has been developed and is discussed below.

The Site is characterized by two hydrostratigraphic units:

- **Uppermost Aquifer**: Includes the unlithified natural geologic materials of the Cahokia Alluvium and Henry Formation extending from the upper saturated zone to the bedrock.
- **Bedrock Confining Unit**: Comprised of shales with thin limestone, sandstone, and coal beds. This bedrock confining unit is encountered at the EAP at elevations ranging from 399.2 to 410.2 feet North American Vertical Datum of 1988 (NAVD88).

In the vicinity of the EAP groundwater generally flows from the south beneath the EAP toward the Illinois River (**Figure 1-3**) through the Uppermost Aquifer. Periodic and temporary flow reversals are possible during periods of high river elevations or flooding (**Figure 1-4**). Vertical migration is limited by the underlying Pennsylvanian-age shale bedrock unit which acts as a confining layer.

FINAL GMP HEN EAP.docx 8/19

2. GROUNDWATER MONITORING SYSTEMS

2.1 Existing Monitoring Well Network and Analysis

Several monitoring programs are being conducted as required by the IEPA and the United States Environmental Protection Agency (USEPA) to evaluate the CCR units associated with the HPP EAPS and the CCWL. The networks have changed over time and many of the wells and parameters overlap as a result of previously approved monitoring programs and permits which were developed to focus on specific (and separate) units at the EAPS. The monitoring requirements for each of the CCR and non-CCR units at the EAPS include:

- CCWL
 - Initial Facility Report (IFR) (Section 28)
 - 40 C.F.R. § 257
- AP2 and AP4
 - 40 C.F.R. § 257 for AP2 (AP4 was classified as capped or otherwise maintained and is not subject to 40 C.F.R. § 257 groundwater monitoring requirements)
 - IEPA Closure Plan (2019 GMP included in Closure and Post-Closure Care Plan for the Hennepin AP2)
 - 35 I.A.C. § 845
- EAPS (also includes Leachate Pond and Polishing Pond)
 - IEPA Water Pollution Control Permit (WPCP) 2019-EO-64097 Special Condition No. 4
- EAP (subject of this GMP)
 - 40 C.F.R. § 257
 - 35 I.A.C. § 845

Two monitoring programs specific to the EAP exist, the 40 C.F.R. § 257 monitoring program and the 35 I.A.C. § 845 monitoring program. This GMP is being provided to expand the 40 C.F.R. § 257 groundwater monitoring network and monitoring program specific to the EAP to align with the monitoring network established for 35 I.A.C. § 845. Monitoring networks and programs that apply to other units are not discussed in this GMP. DMG entered into a compliance commitment agreement (CCA) with the IEPA on December 28, 2022. Groundwater monitoring in accordance with CCA and the 35 I.A.C. § 845 proposed groundwater monitoring plan and sampling methodologies provided in the operating permit application for the EAP is scheduled to commence no later than the second quarter of 2023. After the EAP has been issued an approved operating permit, groundwater monitoring shall be conducted in accordance with that operating permit. As specified in the CCA, groundwater sampling requirements that apply to the CCR SI under other existing permit programs will become void upon issuance of an approved operating permit pursuant to 35 I.A.C § 845.

2.1.1 Existing 40 C.F.R. § 257 Monitoring Program

The 40 C.F.R. § 257 well network for the EAP consists of seven monitoring wells installed nearby or adjacent to the EAP within the Uppermost Aquifer. The EAP 40 C.F.R. § 257 well network

FINAL GMP HEN EAP.docx 9/19

consists of three background monitoring wells (07, 08, and 08D) and four compliance monitoring wells (12, 13, 46, and 47). Monitoring wells 16 and 17 are also being used as additional background wells to represent groundwater quality impacts from off-site, upgradient sources. The boring logs, well construction forms, and other related monitoring well forms are available in the EAP Operating Record as required by 40 C.F.R. § 257.91 for each monitored CCR unit or CCR Multi-Unit and are included in Appendix A of the HCR (Ramboll, 2021).

Assessment monitoring in accordance with 40 C.F.R. § 257.95 was initiated on April 9, 2018. Details on the procedures and techniques used to fulfill the groundwater sampling and analysis program requirements are found in the Multi-Site Sampling and Analysis Plan (SAP) (Ramboll, 2022a).

Groundwater samples are collected semiannually and analyzed for the following laboratory and field parameters from Appendix III and Appendix IV of 40 C.F.R. § 257, summarized in **Table A** below.

Table A. 40 C.F.R. § 257 Groundwater Monitoring Program Parameters

Field Parameters ¹							
Groundwater Elevation	рН						
Appendix III Parameters (Total, except total dissolved solids [TDS])							
Boron	Chloride	Sulfate					
Calcium	Fluoride	TDS					
Appendix IV Paramete							
Antimony	Cadmium	Lead	Selenium				
Arsenic	Chromium	Lithium	Thallium				
Barium	Cobalt	Mercury	Radium 226 and 228 combined				
Beryllium	Fluoride	Molybdenum					

¹Dissolved oxygen, temperature, specific conductance, oxidation/reduction potential, and turbidity are recorded during sample collection.

TDS - total dissolved solids

Results and analysis of groundwater sampling are reported annually by January 31 of the following year and made available on the CCR public website as required by 40 C.F.R. § 257.

2.1.2 35 I.A.C. § 845 Well Installation and Monitoring

In 2021, four additional monitoring wells (52, 53, 54, and 55) were installed along the perimeter of the EAP to assess the vertical and horizontal lithology, stratigraphy, chemical properties, and physical properties of geologic layers to a minimum of 100 feet below ground surface (bgs) as specified in 35 I.A.C. § 845.620(b). Additionally, three leachate monitoring wells (XPW01, XPW02, and XPW03) were installed within the EAP to characterize the CCR materials.

Prospective 35 I.A.C. § 845 monitoring wells were sampled for eight rounds from February to August 2021 and the results were assessed for selection of the 35 I.A.C. § 845 monitoring well network for the EAP. Groundwater samples were collected and analyzed for 35 I.A.C. § 845.600 parameters as summarized in **Table B** on the following page.

FINAL GMP HEN EAP.docx 10/19

Table B. 35 I.A.C. § 845 Groundwater Monitoring Program Parameters

Field Parameters ¹										
Groundwater Elevation	pН	Turbidity								
Metals (Total)										
Antimony	Boron	Cobalt	Molybdenum							
Arsenic	Cadmium	Lead	Selenium							
Barium	Calcium	Lithium	Thallium							
Beryllium	Chromium	Mercury								
Inorganics (Total)										
Fluoride	Sulfate	Chloride	TDS							
Other (Total)										
Radium 226 and 228 combined										

 $^{^{1}}$ Dissolved oxygen, temperature, specific conductance, and oxidation/reduction potential were recorded during sample collection.

Data and results from the 35 I.A.C. § 845 background monitoring were included in the water quality discussion included in the HCR (Ramboll, 2021). The data collected from background locations during the 35 I.A.C. § 845 monitoring were used to evaluate and calculate background concentrations for the EAP.

2.2 Expansion of Existing 40 C.F.R. § 257 Monitoring Well Network

The existing 40 C.F.R. § 257 network is being expanded to include 11 monitoring wells screened in the Uppermost Aquifer (07, 08, 08D, 12, 13, 16, 17, 46, 47, 52, and 54) and two temporary water level only surface water staff gages (XSG01 and SG02). The proposed network is summarized in **Table C** on the following page and displayed on **Figure 2-1**. Eleven wells (five background and six compliance) will be used to monitor groundwater concentrations within the Uppermost Aquifer.

The groundwater samples collected from the 11 wells will be used to monitor and evaluate groundwater quality and demonstrate compliance with the groundwater quality standards included in 40 C.F.R. § 257.94(e) and 40 C.F.R. § 257.95(h). The proposed monitoring wells will yield groundwater samples that accurately represent the quality of background groundwater that has not been affected by leakage from the EAP, as well as downgradient groundwater at the waste boundary of the EAP (as required in 40 C.F.R. § 257.91(a)(1) and (2)). Monitoring well depths and construction details are listed in **Table 2-1** and summarized in **Table C** on the following page.

Any future changes to the groundwater monitoring well network as approved by the IEPA under 35 I.A.C. § 845 will be incorporated into the 40 C.F.R. § 257 network.

FINAL GMP HEN EAP.docx 11/19

Table C. Expanded 40 C.F.R. § 257 Monitoring Well Network

Well ID	Monitored Unit	Well Screen Interval (feet bgs)	Well Type ¹				
07	UA	67.5 - 77.5	Background				
08	UA	51.5 - 61.5	Background				
08D	UA	83.0 - 88.0	Background				
12	UA	49.5 - 59.5	Compliance				
13	UA	67.0 - 69.0	Compliance				
16	UA	56.0 - 66.0	Background				
17	UA	58.1 - 68.1	Background				
46	UA	50.0 - 60.0	Compliance				
47	UA	50.0 - 60.0	Compliance				
52	UA	51.0 - 61.0	Compliance				
54	UA	65.0 - 75.0	Compliance				
XSG01 ^{2,3}	CCR	NA	WLO				
SG02 ^{2,3}	Surface Water	NA	WLO				

¹ Well type refers to the role of the well in the monitoring network.

NA = not applicable

WLO = water level only

2.3 Well Abandonment

No wells are currently proposed for abandonment.

2.4 Groundwater Monitoring System Maintenance Plan

Maintenance procedures provided in the SAP will be performed as needed to assure that the monitoring wells provide representative groundwater samples (Ramboll, 2022a).

FINAL GMP HEN EAP.docx 12/19

² Surface water level measuring points

³ Location is temporary pending implementation of impoundment closure per an approved Construction Permit Application.

3. GROUNDWATER MONITORING PLAN

The GMP will monitor and evaluate groundwater quality to demonstrate compliance with the groundwater quality standards included in 40 C.F.R. § 257.94(e) and 40 C.F.R. § 257.95(h). The groundwater monitoring program will include sampling and analysis procedures that are consistent and that provide an accurate representation of groundwater quality at the background and downgradient wells as required by 40 C.F.R. § 257.91. As discussed in **Section 2**, two monitoring programs specific to the EAP exist, the 40 C.F.R. § 257 monitoring program and the 35 I.A.C. § 845 monitoring program. As specified in the CCA, groundwater sampling requirements that apply to the CCR SI under other existing permit programs will become void upon issuance of an approved operating permit pursuant to 35 I.A.C. § 845.

3.1 Sampling Schedule

Groundwater sampling for the 40 C.F.R. § 257 monitoring well network was initially performed quarterly between 2015 and 2017 to establish baseline groundwater quality. Detection monitoring began in the first quarter of 2017 with semiannual sampling. Assessment monitoring began in the second quarter of 2018. The EAP is currently in assessment monitoring and sampling will continue in 2023 according to the schedule summarized in **Table D** on the following page.

FINAL GMP HEN EAP.docx 13/19

Table D. 40 C.F.R. § 257 Sampling Schedule

Frequency	Duration
Quarterly	Baseline
(groundwater	Began: monitoring began in 2015.
quality)	Ended: monitoring was completed in 2017 to establish baseline groundwater quality for existing landfills and SIs.
	Detection Monitoring
	Begins: monitoring began no later than October 17, 2017, for existing landfills and SIs, following collection of a minimum of eight independent samples for constituents from Appendix III and Appendix IV from each background and downgradient well.
	At least semiannual sampling continues for Appendix III constituents throughout the active life of the CCR unit and the post-closure period.
At least Semi-	For new landfills and SIs, and lateral expansion of existing CCR units, a minimum of eight independent samples from each background well must be collected and analyzed for the constituents in Appendix III and Appendix IV during the first six months of sampling.
annually (groundwater quality)	Ends: Following 30-year post-closure care period or statistically significant increase (SSI) determination and unsuccessful Alternate Source Demonstration (ASD) evaluation within 90 days of SSI determination.
	Assessment Monitoring
	Begins: within 90 days of unsuccessful ASD evaluation for SSIs determined during Detection Monitoring; samples must be collected and analyzed for all constituents listed in Appendix IV. Within 90 days of obtaining the of the initial sample results, and on at least a semiannual basis thereafter, wells must be resampled for Appendix III and for those constituents in Appendix IV that have been detected during sampling.
	Ends: Following demonstration that concentrations of all constituents in Appendices III and IV are below background values for two consecutive sampling events.

Groundwater monitoring for the 40 C.F.R. § 257 well network will continue to follow a schedule in accordance with the requirements of 40 C.F.R. § 257.94 and 40 C.F.R. § 257.95. Upon United States Environmental Protection Agency (USEPA) approval of 35 I.A.C. § 845 as a State CCR Permit Program, the 40 C.F.R. § 257 monitoring will be discontinued and replaced by the 35 I.A.C. § 845 monitoring.

3.2 Groundwater Sample Collection

Groundwater sampling procedures have been developed in the SAP (Ramboll, 2022a) and the collection of groundwater samples is being implemented to meet the requirements of 40 C.F.R. § 257.93. In addition to groundwater well samples, quality assurance samples will be collected as described in the Multi-Site Quality Assurance Project Plan (QAPP) (Ramboll, 2022b).

3.3 Laboratory Analysis

Laboratory analysis will be performed consistent with the specifications of the QAPP. Laboratory methods may be modified based on laboratory equipment availability or procedures, but the Reporting Limit (RL) for all parameters analyzed, regardless of method, will be lower than the

FINAL GMP HEN EAP.docx 14/19

applicable groundwater quality standard. Data reporting requirements and workflow are provided in the Multi-Site Data Management Plan (Ramboll, 2022c).

3.4 Quality Assurance Program

The QAPP includes procedures and techniques for laboratory quality assurance/quality control (QA/QC). Additionally, the SAP includes requirements for field data collection QA/QC.

3.5 Statistical Analysis

A Multi-Site Statistical Analysis Plan (Ramboll, 2022d) has been developed to describe procedures that will be used to establish background conditions and determine SSIs over background concentrations and statistically significant levels (SSLs) over groundwater protection standards (GWPSs) as required by 40 C.F.R. § 257.94 and 257.95. The Multi-Site Statistical Analysis Plan was prepared in accordance with the requirements of 40 C.F.R. § 257.93(f), with reference to the acceptable statistical procedures provided in *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, Unified Guidance* (USEPA, 2009). The determination of SSIs over background concentrations and SSLs over GWPSs will be completed at least semiannually in accordance with the sampling schedule provided in **Section 3.1**.

3.6 Data Reporting

Data reporting for the 40 C.F.R. § 257 monitoring well network will be consistent with recordkeeping, notification, and internet posting requirements described in 40 C.F.R. § 257.105 through 257.107.

3.7 Compliance with Groundwater Quality Standards

Compliance with the groundwater quality standards for the detection monitoring program referenced in 40 C.F.R. § 257.94(e) and the assessment monitoring program referenced in 40 C.F.R. § 257.95(h) will be determined as described in the following sections.

3.7.1 SSI Determination in Detection Monitoring

One-sided upper prediction limits (UPL) will be calculated for each Appendix III constituent using the background samples, with the exception of pH, for which both upper and lower prediction limits will be calculated. A tabular summary of UPLs will be provided in the Annual Groundwater Monitoring and Corrective Action Reports. Individual sampling event concentrations for each constituent detected in the downgradient monitoring wells will then be compared to the background UPL. An exceedance of the UPL for any constituent measured at any downgradient well constitutes an SSI. For pH, a measurement above the UPL or below the lower prediction limit (LPL) constitutes an SSI. As required by 40 C.F.R. § 257.93(h)(2), SSI determination will be completed within 90 days of sampling and analysis.

3.7.2 GWPS and SSL Determination in Assessment Monitoring

A GWPS will be established for Appendix IV constituents. The GWPS will be either the USEPA maximum contaminant levels (MCLs) or the health-based levels (HBLs) established in 40 C.F.R. § 257.95(h)(2) for cobalt, lead, lithium, and molybdenum. The exception to this is when the background concentration is greater than the established MCL or HBL. For this exception, background concentrations will be used to define the GWPS. The background will be calculated using a parametric or non-parametric upper tolerance limit (UTL), depending on the data

FINAL GMP HEN EAP.docx 15/19

distribution. A tabular summary of GWPSs will be provided in the Annual Groundwater Monitoring and Corrective Action Reports.

Compliance will be determined by comparing the lower confidence limit (LCL) of the downgradient concentrations to the GWPS. An SSL will be identified when the LCL exceeds the GWPS. The method of calculating the LCL is described in the Multi-Site Statistical Analysis Plan. If there are too few data points to calculate an LCL (a minimum of four data points is required), the most recent data point is compared to the GWPS. If all the downgradient samples for a well constituent pair are non-detect, the most recent RL is compared to the GWPS. Additionally, an SSL will be identified if all previous samples at a downgradient well were not-detect, and the two most recent samples have both detections and GWPS exceedances. SSL determination will be completed within 90 days of sampling and analysis.

3.8 Alternate Source Demonstrations

An ASD may be completed for a unit under the detection monitoring program in 40 C.F.R. § 257.94(e)(2) or assessment monitoring program in 40 C.F.R. § 257.95(g)(3)(ii) to provide lines of evidence that a source other than the monitored unit caused the SSI/SSL or that the SSI/SSL resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. The ASD will include information and analysis that supports the conclusions and a certification of accuracy by a qualified professional engineer. ASDs will be completed within 90 days of SSI/SSL determination and be provided in the Annual Groundwater Monitoring and Corrective Action Reports as required by 40 C.F.R. § 257.94(e)(2) and 40 C.F.R. § 257.95(g)(3)(ii).

3.8.1 Detection Monitoring Program

As allowed in 40 C.F.R. § 257.94(e)(2), following the determination of an SSI over background for groundwater constituents listed in Appendix III of 40 C.F.R. § 257, an ASD will be evaluated, and if completed within 90 days of the SSI determination, detection monitoring will continue.

If an ASD has not been successfully completed within 90 days of the SSI determination, Assessment Monitoring in accordance with 40 C.F.R. § 257.95 will be initiated within 90 days and the associated notification will be made to the CCR unit operating record and state director (and/or appropriate tribal authority, if applicable).

3.8.2 Assessment Monitoring Program

As allowed in 40 C.F.R. § 257.95(g)(3)(ii), following the determination of an SSL over the GWPS of constituents listed in Appendix IV of 40 C.F.R. § 257, an ASD will be evaluated and, if completed within 90 days of the SSL determination, assessment monitoring will continue.

If an ASD has not been successfully completed within the 90 days of the SSL determination, a Corrective Measures Assessment (CMA) in accordance with 40 C.F.R. § 257.96 will be initiated and the associated notification will be made to the CCR unit operating record and state director (and/or appropriate tribal authority, if applicable).

3.9 Corrective Action

As described in 40 C.F.R. § 257.96, if the ASD summarized in **Section 3.8** has not been successfully completed, the CMA must be completed within 90 days, unless the owner or

FINAL GMP HEN EAP.docx 16/19

operator demonstrates the need for up to an additional 60 days to complete the CMA due to sitespecific conditions of circumstances.

Remedy selection will follow the CMA and be documented in a remedy selection report in accordance 40 C.F.R. § 257.97. A corrective action monitoring plan will be developed to monitor the performance of the selected remedy.

3.10 Annual Report

An Annual Groundwater Monitoring and Corrective Action Report will be completed and placed in the CCR unit operating record by January 31^{st} of the following calendar year. At a minimum, the annual report must contain the following information, to the extent available:

- 1. A map, aerial image, or diagram showing the CCR unit and all background (or upgradient) and downgradient monitoring wells, to include the well identification numbers, that are part of the groundwater monitoring program for the CCR unit.
- 2. Identification of any monitoring wells that were installed or decommissioned during the preceding year, along with a narrative description of why those actions were taken.
- 3. In addition to all the monitoring data obtained under 40 C.F.R. §§ 257.90 through 257.98, a summary including the number of groundwater samples that were collected for analysis for each background and downgradient well, the dates the samples were collected, and whether the sample was required by the detection monitoring or assessment monitoring programs.
- 4. A narrative discussion of any transition between monitoring programs (e.g., the date and circumstances for transitioning from detection monitoring to assessment monitoring in addition to identifying the constituent(s) detected at an SSI relative to background levels).
- 5. Other information required to be included in the annual report as specified in 40 C.F.R. §§ 257.90 through 257.98.
- 6. A section at the beginning of the annual report that provides an overview of the current status of groundwater monitoring and corrective action programs for the CCR unit. At a minimum, the summary must specify all of the following:
 - i) At the start of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in § 257.94 or the assessment monitoring program in 40 C.F.R. § 257.95.
 - ii) At the end of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in 40 C.F.R. § 257.94 or the assessment monitoring program in 40 C.F.R. § 257.95.
 - iii) If it was determined that there was an SSI over background for one or more constituents listed in Appendix III of 40 C.F.R. § 257 pursuant to 40 C.F.R. § 257.94(e):
 - A. Identify those constituents listed in Appendix III of 40 C.F.R. § 257 and the names of the monitoring wells associated with such an increase.
 - B. Provide the date when the assessment monitoring program was initiated for the CCR unit.

FINAL GMP HEN EAP.docx 17/19

- iv) If it was determined that there was an SSL above the groundwater protection standard for one or more constituents listed in Appendix IV of 40 C.F.R. § 257 pursuant to 40 C.F.R. § 257.95(g) include all of the following:
 - A. Identify those constituents listed in Appendix IV of 40 C.F.R. § 257 and the names of the monitoring wells associated with such an increase.
 - B. Provide the date when the CMA was initiated for the CCR unit.
 - C. Provide the date when the public meeting was held for the CMA.
 - D. Provide the date when the CMA was completed.
- v) Whether a remedy was selected pursuant to 40 C.F.R. § 257.97 during the current annual reporting period, and if so, the date of remedy selection.
- vi) Whether remedial activities were initiated or are ongoing pursuant to 40 C.F.R. § 257.98 during the current annual reporting period.

Notes:

Dara

All elevation data are presented relative to the North American Vertical Datum 1988 (NAVD88), GEOID 12A

Type refers to the role of the well in the monitoring network: background (B), compliance (C), or water level measurements only (WLO) WLO wells are temporary pending implementation of impoundment closure per an approved Construction Permit application

-- = data not available

BGS = below ground surface CCR = Coal Combustion Residual

ft = foot or feet

HSU = Hydrostratigraphic Unit PVC = polyvinyl chloride

SW = surface water

UA = Uppermost Aquifer
