

2023 Annual Coal Combustion Residuals (CCR) Landfill Inspection Report	
Site Name:	Joppa Power Plant
Site Address:	2100 Portland Road, Joppa, IL 62953
Owner/Operator:	Electric Energy, Inc.
Owner/Operator Address:	2100 Portland Road, Joppa, IL 62953
CCR Unit:	CCR Landfill

40 C.F.R. § 257.84 INSPECTION REQUIREMENTS FOR CCR LANDFILLS

(b) ANNUAL INSPECTIONS BY A QUALIFIED PROFESSIONAL ENGINEER

(1) Existing and new CCR Landfills and any lateral expansion of a CCR landfill must be inspected on a periodic basis by a qualified professional engineer to ensure that the design, construction, operation, and maintenance of the CCR unit is consistent with recognized and generally accepted good engineering standards. The inspection must, at a minimum, include:

(i) A review of available information regarding the status and condition of the CCR unit, including, but not limited to, files available in the operating record (e.g., the results of inspections by a qualified person, and results of previous annual inspections); and

Qualified person inspection documentation (weekly inspection reports) and previous annual inspection reports were reviewed.

(ii) A visual inspection of the CCR unit to identify signs of distress or malfunction of the CCR unit.

A visual inspection was performed by Zachary J. Fallert, P.E. on October 9, 2023. The inspection included the liner system, stormwater collection system, perimeter roads, and exterior slopes.

(2) **INSPECTION REPORT.** The qualified professional engineer must prepare a report following each inspection that addresses the following:

(i) Any changes in geometry of the structure since the previous annual inspection;

Based on available plant records and visual observation, the geometry of the landfill has not been changed since the previous inspection.

(ii) The approximate volume of CCR contained in the unit at the time of the inspection;

This unit has not received CCR or other permitted wastes.

(iii) Any appearances of an actual or potential structural weakness of the CCR unit, in addition to any existing conditions that are disrupting or have the potential to disrupt the operation and safety of the CCR unit; and

No signs of structural weakness in the CCR landfill or conditions that have the potential to disrupt operation of the landfill were identified in the visual inspection or in the weekly inspection reports. Only minor sedimentation in the lined transfer channel was observed which is corrected through normal and regular maintenance. Multiple holes and tears in the exposed geomembrane liner were observed which will require repair prior to any placement of CCR within the landfill.

(iv) Any other change(s) which may have affected the stability or operation of the CCR unit since the previous annual inspection.

Based on available plant records and visual observation, no changes were observed that are expected to impact stability or operation of the CCR unit.

I, Zachary J. Fallert, being a Registered Professional Engineer in good standing in the State of Illinois, do hereby certify, to the best of my knowledge, information, and belief, that the information contained in this CCR landfill certification report has been prepared in accordance with the accepted practice of engineering and the requirements of 40 C.F.R. § 257.84(b).
