## Texas Commission on Environmental Quality

# Waste Permits Division Correspondence Cover Sheet

Date: 11/21/2022
Facility Name: Oak Grove Steam Electric Station
Permit or Registration No.: CCR106

Nature of Correspondence:
☐ Initial/New
☒ Response/Revision to TCEQ Tracking No.: 27237042 (from subject line of TCEQ letter regarding initial submission)

Affix this cover sheet to the front of your submission to the Waste Permits Division. Check appropriate box for type of correspondence. Contact WPD at (512) 239-2335 if you have questions regarding this form.

**Table 1 - Municipal Solid Waste Correspondence**

| Applications | Reports and Notifications |
|---|---|
| ☐ New Notice of Intent | ☐ Alternative Daily Cover Report |
| ☐ Notice of Intent Revision | ☐ Closure Report |
| ☐ New Permit (including Subchapter T) | ☐ Compost Report |
| ☐ New Registration (including Subchapter T) | ☐ Groundwater Alternate Source Demonstration |
| ☐ Major Amendment | ☐ Groundwater Corrective Action |
| ☐ Minor Amendment | ☐ Groundwater Monitoring Report |
| ☐ Limited Scope Major Amendment | ☐ Groundwater Background Evaluation |
| ☐ Notice Modification | ☐ Landfill Gas Corrective Action |
| ☐ Non-Notice Modification | ☐ Landfill Gas Monitoring |
| ☐ Transfer/Name Change Modification | ☐ Liner Evaluation Report |
| ☐ Temporary Authorization | ☐ Soil Boring Plan |
| ☐ Voluntary Revocation | ☐ Special Waste Request |
| ☐ Subchapter T Disturbance Non-Enclosed Structure | ☐ Other: |
| ☐ Other: | |

**Table 2 - Industrial & Hazardous Waste Correspondence**

| Applications | Reports and Responses |
|---|---|
| ☐ New | ☐ Annual/Biennial Site Activity Report |
| ☐ Renewal | ☐ CPT Plan/Result |
| ☐ Post-Closure Order | ☐ Closure Certification/Report |
| ☐ Major Amendment | ☐ Construction Certification/Report |
| ☐ Minor Amendment | ☐ CPT Plan/Result |
| ☒ CCR Registration | ☐ Extension Request |
| ☐ CCR Registration Major Amendment | ☐ Groundwater Monitoring Report |
| ☐ CCR Registration Minor Amendment | ☐ Interim Status Change |
| ☐ Class 3 Modification | ☐ Interim Status Closure Plan |
| ☐ Class 2 Modification | ☐ Soil Core Monitoring Report |
| ☐ Class 1 ED Modification | ☐ Treatability Study |
| ☐ Class 1 Modification | ☐ Trial Burn Plan/Result |
| ☐ Endorsement | ☐ Unsaturated Zone Monitoring Report |
| ☐ Temporary Authorization | ☐ Waste Minimization Report |
| ☐ Voluntary Revocation | ☐ Other: |

RE: Response to Email NOD New Registration No. CCR106
Oak Grove Management Company LLC – Franklin, Robertson County
Industrial Solid Waste Registration No. 32043
EPA Identification No. TXD000728956
Tracking No. 27237042; RN100216191/CN602881955

Oak Grove Management Company LLC has prepared written responses for the deficiencies identified in the "Email NOD - New Registration – Oak Grove Managements Company LLC – Registration No. CCR106" received via email from TCEQ on September 22, 2022. The written responses are in Table 1. Updated application and appendix revisions are attached for review.

If you have any questions or require any additional information, please contact Eric Chavers at 903-389-6062 or by e-mail at eric.chavers@luminant.com.

Sincerely,

Renee Collins

Table 1 - NOD Summary and Response
Registration No. CCR106 - Oak Grove Management Company LLC
Application Deficiencies - Technical NOD 2

| ID[1] | App. Section | App. Sub Section | Location[2] | Citation | Deficiency Description/Resolution | Response |
|---|---|---|---|---|---|---|
| 1 | I, IV | I.20, IV.A | TCEQ-20870 p. 8 [Appendix A-Process Flow Diagram and narrative, Site Plan] | 40 CFR 257.53 | a. Revise the flow diagram and narrative to add FGD Gypsum that is "temporarily" stored in Cell 4 prior to transporting for beneficial use. Define "temporarily" using a time frame.<br><br>b. Provide information to explain how the beneficial reuse of CCR meets the definition of beneficial use per 40 CFR 257.53. Add a statement to indicate that beneficial reuse determination records will be kept on-site.<br><br>c. Clarify, if the Cell 4 is currently or in the very near future will be used for CCR disposal. Indicate which portion of the Cell 4 will be used for CCR disposal and the portion used for storage of FGD Gypsum for beneficial reuse. Provide clear delineation between storage area of FGD gypsum and disposal area of CCR. Also, explain methods used to prevent any potential releases from CCR stored on a portion of the Cell 4. The application shall also include a statement that when Cell 4 is going to be used for disposal of CCR instead of storing of FGP Gypsum, then Oak grove shall provide appropriate notification and shall include the notification in the operating records. | Cell 4 is active and used for CCR disposal. The eastern portion of the cell is currently used for contact water management. The narrative in Section IV.25.A. has been updated to correctly reflect the gypsum as being managed as waste and reference to storage removed to eliminate confusion. |
| 2 | IV | IV.25.F | Table IV.D | Application Instructions; 40 CFR 257.84(a)(i) | Revise to indicate that weekly inspection items will be conducted at intervals not exceeding 7 days. | Table IV.D. has been revised to contain the following language: "Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a)." Table V.J. has been revised to contain the following language: "Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a)." |
| 3 | V | V.26.A.4 | TCEQ-208-70, p.38; V.26.A.4/5 | Application Instructions; 40 CFR 257.73(d); 30 TAC 352.731 | Remove the term "NA" and provide a dike certification (TCEQ-20870 version 09-27-2021) form. | "N/A" removed and following statement added at Section V.26.A.5. In October 2016, the initial certified Periodic Hazard Potential Classification Assessments, Periodic Structural Stability Assessments, and Periodic Safety Factor Assessments were completed for each FGD Pond (FGD-A, FGD-B, FGD-C) as required by 40 CFR 257.73(a), 257.73(d), and 257.73(e). In October 2021, the certified 5-Year Updates to these assessments were completed as required by 40 CFR 257.73 and 30 TAC 352.731, which identified no structural deficiencies. The most recent 2021 5-Year Assessment Updates are located in APPENDIX E. Based on the conclusion in the certified 5-year updates that no structural deficiencies exist, the facility is submitting these documents in lieu of the Dike Certification. |

| | | | | | | |
|---|---|---|---|---|---|---|
| 4 | V | V.J. | Table V.J. | Application Instructions; 40 CFR 257.83(a)(1)(iii); 30 TAC 352.831(a) | Revise table to include inspections of CCR unit monitoring equipment at a frequency not exceeding 30 days. | Table V.J. has been revised to contain the following language: "Unit instrumentation (water level gauge) is inspected and monitored at intervals not exceeding 30 days per 40 CFR 257.83(a)(1)(iii)." |
| 5 | V | V.26.B | [Appendix E – History of Construction] Pg. 2 | 40 CFR 257.73 (c)(1)(iv) | Provide the name and size in acres of the watershed within which the FGD ponds are located. | Watershed information has been added in the report, "History of Construction-Addendum No. 1" located in APPENDIX E. |
| 6 | V | V.26.G | [Appendix E - Structural Stability Assessment] | 40 CFR 257.73 (a) (1) | Indicate whether permanent identification markers have been placed on or adjacent to each CCR unit. | Permanent identification markers have been placed on or adjacent to each CCR unit as specified in 30 TAC 352.731(a) and 40 CFR 257.73(a)(1). |
| 7 | V | V.26.G | [Appendix E] | 30 TAC §352.731(a); 40 CFR §257.73(d)(1)(iv) | Provide a statement indicating that vegetated slopes of dikes and surrounding areas will not exceed a height of 6-inches above the slope of the dike. | As referenced in the Federal Register notice approving Texas's CCR program (86 Fed. Reg. 33,892, 33,893 n.1 (June 28, 2021)), on June 14, 2016, the D.C Circuit Court vacated the phrase "not to exceed a height of 6 inches above the slope of the dike" within 40 CFR 257.73(a)(4), 257.73(d)(1)(iv), 257.74(a)(4), and 257.74(d)(1)(iv). Accordingly, that language should not be part of the approved Texas CCR rule. USEPA proposed slope protection requirements in a March 2018 proposal, but it has not yet finalized those requirements. |
| 8 | VI | VI.27.G | [Appendix F - Ash Landfill and FGD Ponds] | Application Instructions; 30 TAC 352.911; 40 CFR 257.91€ | Provide well construction details for up gradient and downgradient monitoring wells. | Well construction details for all groundwater monitoring wells are located in the "Groundwater Monitoring System Certification Report" as well as the "Groundwater Monitoring Plan" for the Ash Landfill and the FGD Ponds. Both reports can be found in APPENDIX F of the application. |
| 9 | VI | VI.29 | Table VI.C-1 | Application Instructions; 40 CFR 257.94 Appendix III | Add and complete attached "Table VI.C-1 – Groundwater Detection Monitoring Parameters.", if applicable. This table was inadvertently omitted in the application form. | Table VI.C-1 has been inserted into application and completed. |
| 10 | VI | VI.30.H | Table VI.D-2 | Application Instructions | Replace title of "Table VI.D.2 – Groundwater Detection Monitoring Parameters" with "Table VI.D-2 – Groundwater Assessment Monitoring Parameters" and complete if applicable. | Table VI.D-2 has been inserted into application and completed. |
| 11 | VII | VII.31 | (Appendix G (Page 6175) | 40 CFR 257.102(d)(1)(iii) | Provide the slope stability analysis using the available site-specific geotechnical data instead of generally accepted assumptions. | "Closure Plan-Addendum No. 1" for both the FGD Ponds and Ash Landfill 1 provide confirmation that the Slope Stablitiy Model will be updated using site-specific geotechnical data during final closure are in APPENDIX F. |
| 12 | VII | VII.32 | [Appendix H] | 30 TAC 352.131(a) and (b); 30 TAC 352.1101 | a. Include the year in terms of dollars that the estimate was made.<br>b. Remove any post-closure plan and cost estimate information that is not applicable to facility. | A) The "Post Closure Care Cost Estimate" located in APPENDIX H is based on 2021 dollars as noted in Tables 1 and 2.<br>B) The "Post Closure Care Cost Estimate" located in APPENDIX H has been updated to only include the Oak Grove facility. |
| 13 | VIII | VIII.34 | VIII.34 | 30 TAC 352.1101 | Provide a statement that a Financial Assurance mechanism will be provided within 90 days if a registration is issued. For assistance, contact Mr. Mark Stoebner, Financial Analyst at mark.stoebner@tceq.texas.gov. | Oak Grove Management Company LLC will provide an acceptable financial assurance mechanism per 30 TAC 352.1101 no more than 90 days after the executive director's approval of the registration. |

[1] Deficiency ID – Key: Use this number to identify the NOD response .

[2] Location of deficiency in submittal/application. Items in square brackets [ ] refer to applicant's supplemental information submitted as attachments/appendices to the application form.

## Texas Commission on Environmental Quality

**Registration Application for Coal Combustion Residuals (CCR) Waste Management**

# I. General Information

## 1. Reason for Submittal

Type of Registration Application

☐ New ☐ Major Amendment ☐ Minor Amendment

☒ Notice of Deficiency (NOD) Response ☐ Transfer ☐ Name Change

☐ Other

## 2. Application Fees

☒ $150 Application Fee

Payment Method

☐ Check ☒ Online through ePay portal <www3.tceq.texas.gov/epay/>

If paid online, enter ePay Trace Number: 582EA000467512

## 3. Facility Information

*Facility information must match regulated entity information on the Core Data Form.*

Applicant: ☐ Owner ☐ Operator ☒ Owner/Operator

Facility TCEQ Solid Waste Registration No: 32043

Facility EPA ID: TXD000728956

Regulated Entity Reference No. (if issued): RN100216191

Facility Name: OAK GROVE STEAM ELECTRIC STATION

Facility (Area Code) Telephone Number: 214-875-8338

Facility physical street address (city, state, zip code, county): 8127 OAK GROVE ROAD, FRANKLIN, TX, 77856, ROBERTSON

Facility mailing address (city, state, zip code, county): 6555 SIERRA DR, DALLAS, TX 75039, DALLAS

Latitude (Degrees, Minutes Seconds): 31° 11′ 06″

Longitude (Degrees, Minutes Seconds): 96° 29′ 07″

## 4. Publicly Accessible Website

Provide the URL address of a publicly accessible website where the owner or operator of a CCR unit will post information.
https://www.luminant.com/ccr/

## 5. Facility Landowner(s) Information

Facility landowner(s) name: OAK GROVE MANAGEMENT COMPANY LLC

Facility landowner mailing address: 6555 SIERRA DR

City: Irving State: TX Zip Code: 75039

(Area Code) Telephone Number: 214-875-8338

Email Address (optional):

## 6. CCR Waste Management Unit(s)

☒ Landfill Unit(s) ☒ Surface Impoundment(s)

For each existing landfill, new landfill and lateral expansion, existing surface impoundment, and new surface impoundment and lateral expansion(s) provide information on type of waste, the registered unit(s) in which they are managed, and sampling and analytical methods.

Submit the following tables:

Table I.6. – CCR Waste Management Units

Table I.6.A. – Waste Management Information

Table I.6.B. – Waste Managed in Registered Units

Table I.6.C. – Sampling and Analytical Methods

## 7. Description of Proposed Activities or Changes to Existing Facility

Provide a brief description of the proposed activities if application is for a new facility, or the proposed changes to an existing facility or registration conditions, if the application is for an amendment.

Oak Grove Management Company, LLC (Oak Grove) operates the Oak Grove Steam Electric Station (OGSES), which is located approximately 10 miles north of the town of Franklin in Robertson County, Texas. The OGSES consists of two coal/lignite-fired units with a combined operating capacity of approximately 1600 megawatts. Coal combustion residuals (CCR) including fly ash, bottom ash, and flue gas desulfurization (FGD) gypsum are generated as part of OGSES unit operation. The Texas Commission on Environmental Quality (TCEQ) Solid Waste Registration Number (SWR No.) for the OGSES is 32043. CCR is managed in one onsite landfill, Ash Landfill 1, and three surface impoundments, FGD-A, FGD-B, and FGD-C.

Ash Landfill 1 is the primary disposal facility for CCR generated at the OGSES and is located approximately 1200 feet southwest of the OGSES. Ash Landfill 1 is listed on the Notice of Registration (NOR) for the OGSES as Unit No. 010 and is regulated as a Class 2 non-hazardous industrial solid waste landfill under 30 TAC §335.

Gyspum/scrubber sludge that cannot be recycled and selected process wastewaters are managed in FGD-A, FGD-B, and FGD-C ponds. These ponds are collectively referred to as the FGD Ponds. Solids from the FGD Ponds are routinely removed as part of on-going operations and maintenance activities. These solids are placed in Ash Landfill 1 (WMU 010). The FGD Ponds are located approximately 1500 feet northwest of the OGSES. The FGD Ponds are list on the NOR for the OGSES as waste management units 011 (FGD-A), 012 (FGD-B), and 013 (FGD-C). The FGD Ponds are regulated as Class 2 non-hazardous surface impoundments under 30 TAC §335.

## 8. Primary Contact Information

Contact Name: Renee Collins Title: Sr. Director, Environmental Services

Contact mailing address: 6555 Sierra Drive
City: Irving County: Dallas State: Texas Zip Code: 75039
(Area Code) Telephone Number: 214-875-8338

Email Address (optional): renee.collins@luminant.com

## 9. Notice Publishing

Party responsible for publishing notice:
☒ Applicant ☐ Consultant ☐ Agent in Service

Contact Name: Renee Collins Title: Sr. Director, Environmental Services

Contact mailing address: 6555 Sierra Drive
City: Irving County: Dallas State: Texas Zip Code: 75039
(Area Code) Telephone Number: 214-875-8338

## 10. Alternative Language Notice

Is an alternative language notice required for this application? For determination, refer to Alternative Language Checklist on the Public Notice Verification Form (TCEQ-20244-Waste-NORI).

☐ Yes ☒ No

## 11. Public Place Location of Application

Name of the Public Place: Robertson County Carnegie Library
Physical Address: 315 East Dechard Street
City: Franklin County: Robertson State: TX Zip Code: 77856
(Area code) Telephone Number: 979-828-4331

## 12. Ownership Status of the Facility

☐ Corporation ☐ Limited Partnership
☐ Sole Proprietorship ☐ General Partnership ☒ Other (specify): Limited Liability Company

Does the Site Owner (Permittee/Registrant) own all the CCR units and all the facility property?

☒ Yes ☐ No

## 13. Property / Legal Description Information

Provide a legal description and supporting documents of the property where the management of CCR waste will occur; including a survey plat and a boundary metes and bounds description (30 TAC §352.231(g)).

Submit the following documents:

a. Property Legal Description
b. Property Metes and Bounds Description
c. Metes and Bounds Drawings
d. On-Site Easements Drawings

See APPENDIX A for Property/Legal Description Information for the following CCR units:
Ash Landfill 1
FGD Pond A
FGD Pond B
FGD Pond C

Property Owner Affidavit also located in APPENDIX A.

## 14. Operator Information

Identify the entity who will conduct facility operations, if the owner and operator are not the same.

Operator Name: Same as Owner

Operator mailing address:

City: State: Zip Code:

(Area Code) Telephone Number:

Email Address (optional):

## 15. Confidential Documents

Does the application contain confidential documents?

☐ Yes ☒ No

If "Yes", cross-reference the confidential documents throughout the application and submit as a separate attachment in a binder clearly marked "CONFIDENTIAL."

## 16. Permits and Construction Approvals

| Permit or Approval | Received | Pending | Not Applicable |
|---|---|---|---|
| Hazardous Waste Management Program under the Texas Solid Waste Disposal Act | ☒ | ☐ | ☐ |
| Underground Injection Control Program under the Texas Injection Well Act | ☐ | ☐ | ☒ |
| National Pollutant Discharge Elimination System Program under the Clean Water Act and Waste Discharge Program under Texas Water Code, Chapter 26 | ☒ | ☐ | ☐ |
| Prevention of Significant Deterioration Program under the Federal Clean Air Act (FCAA). | ☒ | ☐ | ☐ |
| National Emission Standards for Hazardous Air Pollutants Preconstruction Approval under the FCAA | ☐ | ☐ | ☒ |
| Other (describe): | ☐ | ☐ | ☐ |
| Other (describe): | ☐ | ☐ | ☐ |
| Other (describe) | ☐ | ☐ | ☐ |

## 17. Legal Authority

The owner and operator of the facility shall submit verification of their legal status with the application. This shall be a one-page certificate of incorporation issued by the secretary of state. The owner or operator shall list all persons having over a 20% ownership in the facility.

See APPENDIX A for Certificate of Authority.

## 18. TCEQ Core Data Form

The TCEQ requires that a Core Data Form (TCEQ-10400) be submitted on all incoming applications, unless a Regulated Entity and Customer Reference Number has been issued by the TCEQ and no core data information has changed. For more information regarding the Core Data Form, call (512) 239-5175 or visit the TCEQ Website.

See APPENDIX A for TCEQ Core Data Form.

## 19. Other Governmental Entities Information

**Coastal Management Program**

Is the facility within the Coastal Management Program boundary?

☐ Yes ☒ No

**Local Government Jurisdiction (If Applicable)**
Within City Limits of: N/A
Within Extraterritorial Jurisdiction of: N/A

Is the facility located in an area in which the governing body of the municipality or county has prohibited the storage, processing or disposal of municipal or industrial solid waste?

☐ Yes ☒ No If "Yes", provide a copy of the ordinance or order as an attachment.

## 20. Attachments

Does the application include the following?

| | | |
|---|---|---|
| General Maps | ☒ Yes | ☐ No |
| General Topographic Map | ☒ Yes | ☐ No |
| Facility Layout Map | ☒ Yes | ☐ No |
| Surrounding Features Map | ☒ Yes | ☐ No |
| Process Flow Diagram | ☒ Yes | ☐ No |
| Land Ownership Map | ☒ Yes | ☐ No |
| Land Ownership List | ☒ Yes | ☐ No |
| Pre-printed Mailing Labels | ☒ Yes | ☐ No |

Maps and drawings shall be legible and easily readable by eye without magnification. Scales and paper size shall be chosen based on the type of map submitted, the land area covered, and the amount of detail to be shown. See instructions for details regarding maps and drawings to be submitted in application.

See APPENDIX A for Attachments detailed in Item 20.

Per TCEQ request, a Process Flow Narrative has been included at the end of the Attachments found in APPENDIX A.

## 21. Verification of Compliance

Does the owner and operator verify that the design, construction, and operation of CCR landfill(s) and surface impoundment(s) meets the requirements of 30 TAC §352.231(f) (30 TAC §352.2; 40 CFR §257.52, and 40 CFR §§257.3-1 – 257.3-3).

☒ Yes ☐ No

As requested by TCEQ, please see the "Response to TCEQ CCR Unit Registration Comments" memorandums for Ash Landfill 1 and FGD Ponds provided by Golder in APPENDIX A.

# II. Location Restrictions and Geology

See Instructions and Technical Guidance

## 22. Location Restrictions

Submit certifications and technical reports demonstrating compliance of CCR unit(s) with applicable location restrictions (30 TAC 352, Subchapter E) and comply with 30 TAC §352.231(d) and 30 TAC §352.4 for submission of engineering and geoscientific information.

A. **Placement above the uppermost aquifer** (30 TAC §352.601) (40 CFR §257.60). For those CCR units whose base is less than five feet above the upper limit of the uppermost aquifer, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.60(a) – (c).

B. **Wetlands** (30 TAC §352.611) (40 CFR §257.61). For CCR units located in wetlands, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.61(a) – (c).

C. **Fault areas** (30 TAC §352.621) (40 CFR §257.62). For CCR units located within 200 feet of the outermost damage zone of a fault, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.62(a) – (c).

D. **Seismic impact zones** (30 TAC §352.631) (40 CFR §257.63). For CCR units located in a seismic impact zone, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.63(a) – (c).

E. **Unstable areas** (30 TAC §352.641) (40 CFR §257.64). For CCR units located in unstable areas, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.64(a) – (d).

Location Restriction Demonstration reports for Ash Landfill 1 and FGD Ponds located in APPENDIX B. Location Restriction Evaluation memorandums also located in APPENDIX B.

### 23. Geology Summary Report

Submit a summary of the geologic conditions at the facility, including the relation of the geologic condition to each CCR unit. The summary must include enough information and data and include sources and references for the information. Include all groundwater monitoring data required by 40 CFR Part 257, Subpart D, (30 TAC §352.241, §352.601, §352.621, §352.631, and §352.641) and submitted in accordance of 30 TAC §352.4.

**Note:** Previously prepared documents may be submitted but must be supplemented or updated as necessary to provide the requested information (30 TAC §352.241(b)).

For Geology Summary, please refer to "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F. The Local Geology and Hydrogeology summary is located in Section 2.2 of each report.

All groundwater monitoring data summarized in "2020 Annual Groundwater Monitoring and Corrective Action Report" for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## III. Fugitive Dust Control Plan

### 24. Fugitive Dust Control Plan

A. **Submit a copy of the CCR Fugitive Dust Control Plan** (30 TAC §352.801) (40 CFR §257.80(b)), or the most recently amended plan. The initial plan or subsequent amended plan must be certified by a qualified Texas licensed professional engineer (Texas P.E.) that the plan meets the requirements of 30 TAC Chapter 352.

B. **Submit the most recent Annual CCR Fugitive Dust Control Report** (30 TAC §352.801) (40 CFR §257.80(c)) and include the report information.

CCR Fugitive Dust Control Plan and the 2021Annual CCR Fugitive Dust Control Report located in APPENDIX C.

# IV. Landfill Criteria

See Instructions and Technical Guidance – No. 30 Coal Combustion Residuals Landfill

## 25. Landfill(s) for CCR Waste

Provide the following information below if there is a landfill; if there is more than one landfill, separate information is required for each landfill.

### A. Landfill Characteristics

Describe the design, installation, construction, and operation of the landfill and submit a completed Table IV.A. – Landfill Characteristics.

Ash Landfill 1 consists of four landfill cells (Cells 1 through 4), each constructed with a 3-foot thick compacted clay liner (hydraulic conductivity ≤ 1×10-7 cm/sec). The landfill is constructed above-grade and is surrounded by an earthen perimeter berm that are also provided with a 3-foot-thick compacted clay liner. CCR placement extends above the top of the perimeter berms and the sides of the CCR placed above the berms are graded to slopes of approximately 3H:1V.
Ash Landfill 1 has been in operation since 2008. The current status of Cells 1 through 4 is as follows:

- Cell 1 has received CCR and is inactive. A final cover consisting of a 3-ft thick clay soil (hydraulic conductivity ≤ 1×10-7 cm/sec) overlain with 1.5-ft thick vegetative cover was placed over Cell 1 in 2015.
- Cell 2 has received CCR and is inactive. A final cover consisting of a 40-mil linear low-density polyethylene (LLDPE) geomembrane overlain with a geosynthetic drainage layer and 18 inches of soil was placed over Cell 2 in 2019.
- Cell 3 is active and used for CCR (primarily bottom ash) disposal.
- Cell 4 is active and used for CCR (primarily FGD gypsum) disposal. The eastern portion of Cell 4 is currently used to manage contact water.

### B. Liner Design

1. For existing landfills, provide attachments describing how the facility will comply with 30 TAC 352, Subchapter F (Design Criteria).

   Ash Landfill 1 is an Existing CCR Landfill as defined by the CCR rule. There are no design criteria for Existing CCR Landfills in either the state or federal CCR rule. 30 TAC 352, Subchapter F or 40 CFR 257.70

2. For new landfills or lateral expansions of existing landfills, submit pages describing how the facility will comply with 30 TAC §352.261 and 30 TAC §352.701. N/A

3. Complete Table IV.B. - Landfill Liner System and specify the type of liner used for the landfill.

4. Provide attachments describing the design, installation, and operation of the liner and leak detection system. The description must demonstrate that the liner and leak detection system will prevent discharge to the land, groundwater, and surface water. Submit a quality assurance project plan (QAPP) to ensure that each analysis is performed appropriately.

   The following Soil Liner Evaluation Reports (SLERs) are located in APPENDIX D for the construction of cells 1-4 of Ash Landfill 1:
   SLER-Phase 1 Ash Landfill
   SLER-Cell 1 West Dike Clay Liner Construction

SLER-Cell 2 Ash Landfill
SLER-Cell 3 Ash Landfill
SLER-Cell 4 Ash Landfill

**C. Leachate Collection and Removal**

Submit design information and description of leachate collection and removal system in accordance with 30 TAC §352.701. N/A

Complete Table IV.C. - Landfill Leachate Collection System. N/A

**D. Design of Liner and Leachate Collection and Removal System.**

For a new landfill or lateral expansion of a CCR landfill, provide a qualified Texas P.E. certification and technical report that the design of the liner and the leachate collection and removal system meets the requirements of 30 TAC §352.711. N/A

**E. Run-on and Run-off Controls**

At time of application, attach pages describing how the facility will comply with the run-on and run-off system plan for an existing, new, or lateral expansion of a CCR landfill information. Provide a qualified Texas P.E. certification and technical report that the run-on and run-off control system plans meet the requirements of 30 TAC §352.811.

"Run-on and Run-off Control System Plan" for Ash Landfill 1 is located in APPENDIX D.

**F. Inspection for Landfills**

At time of application, attach pages describing how the facility will comply 30 TAC §352.841 and complete Table IV.D. – Inspection Schedule for Landfills. For existing CCR landfills, provide the most recent inspection report. All CCR landfills and any lateral expansions of a CCR landfill must be inspected for any structural weakness, malfunction, deterioration conditions which are disrupting or have the potential to disrupt the operation or safety of the CCR unit, or any other conditions which may cause harm to human health and environment at a frequency specified in 40 CFR §257.84(a) and (b).

The 2021 Annual CCR Landfill inspection report is located in APPENDIX D.

# V. Surface Impoundment Criteria

See Instructions and Technical Guidance – No. 31 Coal Combustion Residuals Surface Impoundment

## 26. Surface Impoundment(s) for CCR Waste

Provide the following information below if there is a surface impoundment; if there is more than one surface impoundment, separate information is required for each surface impoundment.

**A. General Surface Impoundment(s) Characteristics**

Provide information about the characteristics of the surface impoundment(s): incised, surface area (acres), storage volume (acres-feet), and depth (feet).

For all surface impoundment(s), include the following information:

1. Complete Table V.A. - Surface Impoundments Characteristics. List the surface impoundment(s) to be registered as a CCR unit(s), the wastes managed in each unit, and the rated capacity or size of each unit.

2. Describe the surface impoundment(s) and provide a plan view drawing with cross-sections, if available.

   See “History of Construction” report in APPENDIX E. A summary description of the impoundments is located in Section 3.5 and drawings are included in Attachment 1. “History of Construction-Addendum No. 1” in APPENDIX E provides updates on the completed retrofit of FGD Pond A.

3. Specify the minimum freeboard to be maintained and the basis of the design to prevent overtopping resulting from normal or abnormal operation; overfilling; wind and wave action; rainfall; run-on; malfunctions of level controllers, alarms, and other equipment; and human error. Show that adequate freeboard will be available to prevent overtopping from a 100-year, 24-hour storm.

   Minimum freeboard of 2 feet in FGD-A and FGD-B and minimum freeboard 3 feet in FGD-C. See “Inflow Design Flood Control System Plan”, Section 2.4 for FGD Ponds in APPENDIX E.

4. Waste Flow
   Describe the means that will be used to immediately shut off the flow of waste to the impoundment in the event of liner failure or to prevent overtopping.

   All inflows are controlled via pumps under controlled conditions, see “Inflow Design Flood Control System Plan”, Section 2.0 for FGD Ponds in APPENDIX E.

5. Dike Construction ☒ Yes ☐ No

   If Yes, submit the dike certification (located at the end of the application).

   In October 2016, the initial certified Periodic Hazard Potential Classification Assessments, Periodic Structural Stability Assessments, and Periodic Safety Factor Assessments were completed for each FGD Pond (FGD-A, FGD-B, FGD-C) as required by 40 CFR 257.73(a), 257.73(d), and 257.73(e). In October 2021, the certified 5-Year Updates to these assessments were completed as required by 40 CFR 257.73 and 30 TAC 352.731, which identified no structural deficiencies. The most recent 2021 5-Year Assessment Updates are located in APPENDIX E. Based on the conclusion in the certified 5-year updates that no structural deficiencies exist, the facility is submitting these documents in lieu of the Dike Certification.

   The structural integrity of the dike system must be certified by a qualified Texas P.E. before the registration is issued. If the impoundment is not being used, the dike system must be certified before it can be put into use. The certification must be sealed by a qualified Texas P.E., along with the engineering firm’s name and registration number (30 TAC §352.4).

   A report shall accompany the dike certification which summarizes the activities, calculations, and laboratory and field analyses performed in support of the dike certification. Describe the design basis used in construction of the dikes. A QAPP should be included in the report to ensure that each analysis is performed appropriately and include:

   (1) Slope Stability Analysis

   (2) Hydrostatic and Hydrodynamic Analysis

   (3) Storm Loading

   (4) Rapid Drawdown

Earthen dikes should have a protective cover to minimize wind and water erosion and to preserve the structural integrity of the dike. Describe the protective cover used and describe its installation and maintenance procedures.

## B. Liner Design

For surface impoundment(s), provide information about how the facility will comply with 30 TAC §352.711 for existing CCR surface impoundments. For new and lateral expansion of CCR surface impoundments provide information on how the facility will comply with 30 TAC §352.261, and 30 TAC §352.721, see Instructions and Technical Guidance No. 31 Coal Combustion Residuals Surface Impoundment. The qualified Texas P.E. must certify that the design of the liner complies with the requirements of 30 TAC Chapter 352 and 40 CFR Part 257, Subpart D, where required.

Is the CCR surface impoundment unlined? ☒ Yes ☐ No

FGD Pond A, FGD Pond B, and FGD Pond C are lined per 40 CFR § 257.71.

If "Yes", the CCR unit is subject to the closure requirements under 30 TAC Chapter 352 and 40 CFR §257.101(a) to retrofit or close. A notification must be prepared stating that an assessment of corrective measures has been initiated.

1. Complete Table V.B. - Surface Impoundment Liner System for each surface impoundment to be registered.
2. Describe the design, installation and operation of liner and leak detection components. The description must demonstrate that the liner and leak detection system will prevent discharge to the land and surface water. Submit a QAPP report to ensure that each analysis is performed appropriately.

   See "History of Construction" and "History of Construction-Addendum No.1"reports for all ponds. Also see "Construction Completion and Quality Assurance Report" for FGD-A and "Liner Evaluation Reports" for FGD-B and FGD-C in APPENDIX E.
3. For new or laterally expansions of existing surface impoundments, provide a subsurface soil investigation report that must include:
   a. A description of all borings drilled, at the unit location, to test soils and characterize groundwater;
   b. A unit map drawn to scale showing the surveyed locations and elevations of the borings, including location of permanent identification markers ((30 TAC §352.731) and (40 CFR §257.73(a)(1));
   c. Cross-sections prepared from the borings depicting the generalized strata at the unit;
   d. Boring logs, including a description of materials encountered, and any discontinuities such as fractures, fissures, slickensides, lenses or seams;
   e. A description of the geotechnical data and the geotechnical properties of the subsurface soil materials, including the suitability of the soils and strata for the intended uses; and
   f. A demonstration that all geotechnical tests were performed in accordance with industry practices and recognized procedures.

   N/A

## C. Hazard Potential Classification

Provide the current hazard potential classification assessment and associated documentation, as required by 30 TAC §352.731 or §352.741 and 40 CFR §257.73(a)(2) or §257.74(a)(2). The qualified Texas P.E. must certify that the initial hazard potential classification and any subsequent periodic classification was conducted in accordance with the requirements of 30 TAC Chapter 352, where required.

Hazard Potential Classification: **LOW**

See “Hazard Potential Classification Assessment” located in APPENDIX E.

**D. Emergency Action Plan for High or Significantly High Hazard Potential**

Provide the current Emergency Action Plan that has been certified by a qualified Texas P.E. and includes the following requirements from 30 TAC 352, Subchapter F and 40 CFR §257.73(a)(3)(i)(A) - (E) or 40 CFR §257.74 (a)(3)(i)(A) - (E). The qualified Texas P.E. must certify that the written Emergency Action Plan and any subsequent amendment of the plan complies with the requirements of 30 TAC 352, Subchapter F, where required.

N/A

Complete Table V.J. - Inspection of Surface Impoundments

**E. Inflow Design Flood Control System Plan**

Describe how the surface impoundment(s) system will manage stormwater run-on away from the surface impoundment(s) (30 TAC §352.821 and 40 CFR §257.82(a) and (c)). Stormwater run-on must be diverted away from a surface impoundment, based on the hazard potential. Where dikes are used to divert run-on, they must be protected from erosion. Include all analyses used to calculate run-on volumes. Provide the inflow design flood control system plan. Provide qualified Texas P.E. certification that the initial and periodic inflow design flood control system plans meet the requirements of 30 TAC §352.821, where required.

See “Inflow Design Flood Control System Plan” located in APPENDIX E.

**F. History of Construction for Existing CCR Surface Impoundment(s), or the Design and Construction Plans for New and Lateral Expansions**

Provide information on the history of construction for each existing CCR surface impoundment (30 TAC §352.731 and 40 CFR §257.73(c)) or the design and construction plans for new and lateral expansions of each CCR surface impoundment (30 TAC §352.741) and (40 CFR §257.74(c)).

See “History of Construction” and “History of Construction-Addendum No. 1” in APPENDIX E.

**G. Structural Stability Assessment**

Provide the most recent structural stability assessment of the surface impoundments. Include the combined capacity of all surface impoundment spillways with calculations; the peak discharge the unit must meet for all combined spillways; probable maximum flood-high hazard, 1,000-yr-significant high hazard, 100-yr-low hazard; identify if there were any structural stability deficiencies in last assessment; identify how these deficiencies were managed and corrected; and qualified Texas P.E. certification. The structural stability assessment must include all information required in 30 TAC §352.731 for existing surface impoundments or 30 TAC §352.741 for new or laterally expanding surface impoundments.

See “Structural Stability Assessment” located in APPENDIX E.

**H. Safety Factor Assessment**

The current safety factor assessment must be submitted with the application. It must include documentation that demonstrates whether the calculated factors of safety for each CCR surface impoundment achieve the minimum safety factors specified in 30 TAC 352, Subchapter F and 40 CFR §257.73(e)(1)(i) - (iv) and 40 CFR §257.74(e)(1)(i) - (iv) for the critical cross-section of the embankment. The critical cross-section is the cross-section anticipated to be the most susceptible to structural failure based on appropriate engineering considerations, including loading conditions. The safety factor assessments must be supported by appropriate engineering calculations and certified by a qualified Texas P.E.

See "Safety Factor Assessment" located in APPENDIX E.

# VI. Groundwater Monitoring and Corrective Action (30 TAC 352, Subchapter H)

See Instructions and Technical Guidance – No. 32 Coal Combustion Residuals Groundwater Monitoring and Corrective Action

## 27. Groundwater Monitoring System

**A.** Complete Table VI.A. - Unit Groundwater Detection Monitoring System.

**B.** Provide a map showing location of wells, groundwater elevations, and groundwater flow direction.

See Groundwater Potentiometric Surface Maps in Appendix C of the "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

**C.** Provide attachments describing how the facility will comply with the requirements in 30 TAC §352.911 and provide a certification by a qualified Texas P.E or qualified Texas P.G. that the groundwater monitoring system design and construction meet the requirements of 30 TAC Chapter 352.

See "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

**D.** Provide a figure showing the geologic units and fill materials overlying the uppermost aquifer, materials comprising the uppermost aquifer, and materials comprising the confining unit defining the lower boundary of the uppermost aquifer, including, but not limited to, thicknesses, stratigraphy, lithology, hydraulic conductivities, porosities and effective porosities.

See Figures 3,4,5 in the "Groundwater Monitoring System Certification" report for Ash Landfill 1 located in APPENDIX F.

See Figures 3, 4,5,6 in the "Groundwater Monitoring System Certification" report for FGD Ponds located in APPENDIX F.

**E.** For a multiunit groundwater monitoring system, demonstrate that the groundwater monitoring system will be equally as capable of detecting monitored constituents at the waste boundary of the CCR unit as the individual groundwater monitoring system for each CCR unit by providing at minimum the following information:

1. Number, spacing, and orientation of each CCR unit;

2. Hydrogeologic setting; and

3. Site history.

See "Groundwater Monitoring System Certification" report for FGD Ponds located in APPENDIX F.

**F.** Has there been any sampling concentrations of one or more constituents listed in Appendix IV detected at statistically significant levels above the groundwater protection standard (GWPS)? ☒ Yes ☐ No

FGD Ponds

**G.** Provide information on how monitoring wells have been constructed and cased in a manner that maintains the integrity of the monitoring well borehole and to prevent contamination of samples and the groundwater.

See Appendix A in the "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## 28. Groundwater Monitoring Sampling and Analysis Program

Provide a sampling and analysis plan that includes procedures and techniques; sampling and analytical methods that are appropriate for groundwater sampling; and that address the requirements of 30 TAC §352.931 and 40 CFR §257.93. Provide a P.E or P.G. certification that describes the statistical method selected to evaluate the groundwater monitoring data and certifies that the selected statistical method is appropriate for evaluating the groundwater monitoring data for the CCR management area. Refer to TG-32 for information and guidance.

See "Groundwater Monitoring Plan-Revision 2" and "Statistical Analysis Plan-Revision 1" for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## 29. CCR Unit(s) in a Detection Monitoring Program

Does the facility have CCR unit(s) in a Detection Monitoring Program?

☒ Yes ☐ No

Ash Landfill 1

If "Yes", Submit the following information:

**A.** Submit Table VI.C. – Facility CCR Units Under Detection Monitoring.

**B.** Provide a Background Evaluation Report.

Background data was derived from the eight independent sampling events required under 40 CFR 257.94(b). A summary of the background monitoring program can be found in Section 3.0 of the "2017 Annual Groundwater Monitoring Report". Background water quality data is summarized in Tables 3 and 4 and laboratory analytical reports are located in Appendix A of the 2017 report.

The "2017 Annual Groundwater Monitoring Report" for Ash Landfill 1 is in APPENDIX F.

**C.** Provide a report with the results of semiannual monitoring events.

The "2020 Annual Groundwater Monitoring and Corrective Action Report" and the "2021 Annual Groundwater Monitoring and Corrective Action Report-Revision 1" for Ash Landfill 1 is in APPENDIX F.

1. Has a statistically significant increase (SSI) been detected for one or more of the constituents listed in Appendix III at any monitoring well?

   ☒ Yes ☐ No

2. Has a notification to the executive director been sent within 14 days?

   ☒ Yes ☐ No

3. Date assessment monitoring program will start: N/A Due to successful ASDs

4. Do you plan to provide an alternative source demonstration (ASD)?

   ☒ Yes ☐ No

## 30. CCR Unit(s) in an Assessment Monitoring Program

Does the facility have CCR unit(s) in an Assessment Monitoring Program?

☒ Yes ☐ No

FGD Ponds

If "Yes", Submit information related for units.

**A.** Complete Table VI.D. – CCR Units Under Assessment Monitoring.

**B.** Provide, for each well in assessment monitoring status, the recorded concentrations lab sheets and results in a tabulated form.

See summary tables 3 and 4 for all results in tabulated form in the "2020 Annual Groundwater Monitoring and Corrective Action Report" for the FGD Ponds in APPENDIX F. The "2021 Annual Groundwater Monitoring and Corrective Action Report-Revision 1" for the FGD Ponds is also in APPENDIX F.

**C.** Have the concentrations of all constituents listed in Appendices III and IV been at or below background values, using the statistical procedures in 30 TAC §352.931 and 40 CFR §257.93(g), for two consecutive sampling events for the CCR unit(s)? ☐ Yes ☒ No

If answer to above is yes, detection monitoring may resume. The owner or operator must prepare a notification stating that detection monitoring is resuming for the CCR unit and obtain written approval from the executive director.

**D.** Are there any concentrations of any constituent in Appendices III and IV above background values? ☒ Yes ☐ No

1. Has a notification to the executive director been sent within 14 days?

   ☒ Yes ☐ No

**E.** Date assessment of corrective measures will be initiated (must be within **90 days** of finding a statistically significant level above the GWPS) for the CCR unit(s): April 8, 2019

**F.** Will you provide an ASD (see TG-32 for an acceptable submittal)? ☐ Yes ☒ No

**G.** Date assessment of corrective measures will be initiated if ASD is not accepted? N/A

**H.** Complete Table VI.D-2. - Groundwater Detection Monitoring Parameters

**Note**: Refer to TG-32 regarding establishing a GWPS for each constituent in Appendix IV detected in the groundwater and attach as table.

**I.** Have you completed the assessment of corrective measures? ☒ Yes ☐ No
If "Yes", date assessment of corrective measures was completed: September 5, 2019
If "No", date assessment of corrective measures will be completed:
Expected date of submittal of amendment (see note below):
Provide completed assessment of corrected measures materials.

"CCR Assessment of Corrective Measures-Revision 1" dated May 2021 can be found in APPENDIX F.

**Note**: Within **30 days** of completing the assessment of corrective measures, and before remedy implementation, the owner or operator shall submit an application for amendment to the registration. In some circumstance"s, the assessment of corrective measures and selected remedy may be approved as part of the initial application for the CCR unit registration.

**J.** Have you selected a remedy? ☒ Yes ☐ No

"Remedy Selection Report" located in APPENDIX F.

Provide public meeting documentation under 30 TAC §352.961 and a report under 30 TAC §352.971 and 40 CFR §257.97.

"Assessment of Corrective Measures Public Meeting Documents" located in APPENDIX F.

# VII. Closure and Post-Closure Care

See Instructions and Technical Guidance

Submit a full closure plan and post-closure plan and all information describing how the owner or operator will comply with 30 TAC 352, Subchapter J and 40 CFR §§257.100 - 257.104. The owner of property on which an existing disposal facility is located, following the closure of a unit, must also submit documentation that a notation has been placed in the deed to the facility that will in perpetuity notify any potential purchasers of the property that the land has been used to manage CCR wastes and its use is restricted (30 TAC §352.1221 and 40 CFR §257.102(i)). For CCR units, closed after October 19, 2015, that were closed before submission of the application, the applicant should submit documentation to show that notices required under 30 TAC 352, Subchapter K and 40 CFR §257.105 or §257.106 have been filed.

## 31. Closure Plan

This section applies to the owners and operators of all CCR units required to be registered. The applicant must close the facility in a manner that minimizes need for further maintenance and controls, or eliminates, to the extent necessary to protect human health and the environment, the post-closure release of CCR waste, chemical constituents of concern, leachate, contaminated rainfall, or waste decomposition products to the groundwater, surface waters, or to the atmosphere.

The type of unit to be closed can determine the level of detail sufficient for a closure plan. CCR units which have been certified closed after October 19, 2015, must provide documentation to demonstrate compliance with state and federal regulations.

For each unit to be registered, complete Table VII.A.1. - Unit Closure and list the CCR Unit components to be decontaminated, possible methods of decontamination, and possible methods of disposal of wastes and waste residues generated during unit closure. All ancillary components must be decontaminated, and the generated waste disposed of appropriately.

See "Closure Plan" and "Closure Plan-Addendum No. 1" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Information about CCR units closed or to be closed under alternative closure requirements must be provided in Table VII.A.2. - CCR Units Under Alternative Closure Notification.

Guidance on design of a closure cap and final cover for non-hazardous industrial solid wastes landfills is provided in EPA publication 530-SW-85-014, TCEQ Technical Guidance No. 3 and TCEQ publication, RG-534, "Guidance for Liner Construction and Testing for a Municipal Solid Waste Landfill".

## 32. Post-Closure Care Plan

Provide a post-closure care plan that complies with the requirements of 30 TAC §352.1241.

See "Post-Closure Plan" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Post-closure care of each CCR unit must continue for at least 30 years after the date of completing closure of the unit and must consist of monitoring and reporting of the groundwater monitoring systems, in addition to the maintenance and monitoring of CCR unit. Continuation of certain security requirements may be necessary after the date of closure. Post-closure use of property on or in which waste remains after closure must never be allowed to disrupt the integrity of the containment system. In addition, submit the following information:

- The name, address, and phone number of the person or office to contact about the CCR unit during the post-closure period; and

  Luminant-Environmental Services
  Renee Collins-Senior Environmental Director
  6555 Sierra Drive
  Irving, TX 75039
  214-875-8338
  CCRPostClosurePlan@Luminant.com

- A discussion of the future use of the land associated with each unit.

  See section 5.0 of the "Post-Closure Plans" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Landfills and surface impoundments which have been certified closed after October 19, 2015, must be included in post-closure care plans, unless they have been determined to have been closed by waste removal equivalent to the closure standards in 30 TAC §352.1221 and 40 CFR §257.102 or 30 TAC §352.1231 and 40 CFR §257.103. If such a demonstration has been made pursuant to 40 CFR §257.102 or §257.103, but an equivalency determination has not been made, please submit a copy of the demonstration documentation. If an equivalency determination has been made, applicant should submit a copy of this determination.

# VIII. Financial Assurance

## 33. Post-Closure Care Cost Estimate

Financial assurance for post-closure care (30 TAC §352.1101) applies to owners or operators of all CCR units, except CCR units from which the owner or operator intends to remove wastes and perform clean closure. Provide a written cost estimate in current dollars of the total cost of the 30-year (or longer, if applicable under 30 TAC §352.1101(d)) post-closure care period to perform post-closure care requirements as prescribed in 30 TAC §352.1241. The cost estimate must be based on the costs of hiring a third party to conduct post-closure care maintenance.

Complete Table VIII.A.1 – Post-Closure Cost Summary for Existing Registered Units

See Post-Closure Care Cost Estimates in APPENDIX H. Cost estimates for the FGD Pond Area are summarized in Table 1. Cost estimates for Ash Landfill 1 are summarized in Table 2.

Complete Table VIII.A.2. - Post-Closure Cost Summary for Proposed Registered Units

## 34. Financial Assurance Mechanism

The financial assurance for post-closure care is required in accordance with 30 TAC §352.1101. The applicant shall demonstrate the financial assurance within 90 days after approval of the registration with a financial mechanism acceptable to TCEQ in compliance with 30 TAC §352.1101(c) and 30 TAC §37, Subchapters A through D, except as indicated in 30 TAC §352.1111, in an amount no less than the amount specified in the approved Post-Closure Care Cost Summary. Provide a description of the proposed financial assurance mechanism.

Oak Grove Management Company LLC will provide an acceptable financial assurance mechanism per 30 TAC 352.1101 no more than 90 days after the executive director's approval of the registration.

Complete Table VIII.B. - Post-Closure Period, for the authorized post-closure period, to meet the requirements of 30 TAC §352.1241(a) through (c).

**Signature Page**

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

| 010 | Ash Landfill 1 | 010 | Landfill | 22.16 million cubic yards | Active |
| 011 | FGD-A Pond | 011 | Surface Impoundment | 172 ac-ft | Active |
| 012 | FGD-B Pond | 012 | Surface Impoundment | 104 ac-ft | Active |
| 013 | FGD-C Pond | 013 | Surface Impoundment | 218 ac-ft | Active |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

1 Registered Unit No. and N.O.R. No. cannot be reassigned to new units or used more than once.
2 Unit Status options: Active, Closed, Inactive (built but not managing waste), Proposed (not yet built), Never Built, Transferred, Post-Closure.
3 If a unit has been transferred, the applicant should indicate which facility/permit it has been transferred to in the Unit Description column.

**Table I.6.A. – Waste Management Information**

| Waste No.[1] | Waste Type(s) | Source | Volume (tons/year)[2] |
|---|---|---|---|
| 1 | FGD Gypsum | Coal Combustion Byproduct | 837,000 tons |
| 2 | Fly Ash | Coal Combustion Byproduct | 49,000 tons |
| 3 | Bottom Ash | Coal Combustion Byproduct | 332,000 tons |
| 4 | Class 2 Non-Hazardous Sandblast Grit | Misc. Maintenance Activities | < 10 tons |
| 5 | Construction Debris | Misc. Maintenance Activities | < 100 tons |
| 6 | Filters | Misc. Maintenance Activities | < 50 tons |
| 7 | Metal Scrap | Misc. Maintenance Activities | 0 |
| 8 | Activated Carbon Waste | Unused material for Flue Gas Treatment | 0 |
| 9 | Spent Desiccant | Misc. Maintenance Activities | 0 |
| 10 | Spent Ion Exchange Resins | Boiler Water Treatment | < 20 tons |
| 11 | Waste Catalyst | SCR Unit | 150 tons |
| 12 | Supplemental Plant Production Refuse | Plant Laboratory Operations | 0 |
| 13 | Plant Trash | Misc. Plant Operations | 0 |
| | | | |

1 Assign waste number sequentially. Do not remove waste number wastes which are no longer generated

2 Reflects 2020 records

Table I.6.B. – Wastes Managed in Registered Units

| Waste No.[1] | Waste | TCEQ Waste Form Codes and Classification Codes |
|---|---|---|
| 1 | FGD Gypsum | TWC-30013922, TX Form Code-392, Class 2 |
| 2 | Fly Ash | TWC-30023042, TX Form Code-304, Class 2 |
| 3 | Bottom Ash | TWC-30053042, TX Form Code-304, Class 2 |
| 4 | Class 2 Non- Hazardous Sandblast Grit | TWC-37013902, TX Form Code-389, Class 2 |
| 5 | Construction Debris | TWC-37043902, TX Form Code-390, Class 2 |
| 6 | Filters | TWC-37063102, TX Form Code-310, Class 2 |
| 7 | Metal Scrap | TWC-37133072, TX Form Code-307, Class 2 |
| 8 | Activated Carbon Waste | TWC-37184042, TX Form Code-404, Class 2 |
| 9 | Spent Desiccant | TWC-37203192, TX Form Code-319, Class 2 |
| 10 | Spent Ion Exchange Resins | TWC-37264032, TX Form Code-403, Class 2 |
| 11 | Waste Catalyst | TWC-37503932, TX Form Code-393, Class 2 |
| 12 | Supplemental Plant Production Refuse | TWC-39019022, TX Form Code-902, Class 2 |

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

**Table IV.D. – Inspection Schedule of Landfills**

| Facility Unit(s) and Basic Elements | Possible Error, Malfunction, or Deterioration | Frequency of Inspection |
|---|---|---|
| 010-Ash Landfill 1 | Inspect for any appearances of actual or potential structural weakness and other conditions which are disrupting of have the potential to disrupt the operation and safety of the CCR unit | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a). |
| Embankments | Surface cracking, animal burrows, misalignments, slides, vegetative cover, rutting, erosion, seepage, slope protection/chutes | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a). |
| Capped Areas | Animal burrows, vegetative cover, rutting, surface cracking | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a). |
| Active Work Area | Contact water, dusting | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a). |
| Groundwater Monitoring Wells | Deterioration of pads, bollards, missing locks, compromise of casing integrity | Semi-Annual Inspection |
| | | |
| 010-Ash Landfill 1 | | Annually per 40 CFR 257.84(b) |
| | Inspect for any changed in geometry of the structure since the previous annual inspection. | Annual Inspection |
| | Estimate the approximate volume of CCR contained in the unit at the time of the inspection. | Annual Inspection |
| | Inspect for any appearance of actual or potential structural weakness of the CCR unit, and any conditions that are disrupting or have the potential to disrupt the operation and safety of the unit. | Annual Inspection |
| | Inspect for any other change(s) which have affected the stability or operation of the CCR unit since the previous inspection | Annual Inspection |
| | | |

**Table V.A. – Surface Impoundment Characteristics**

| Registered Unit No. | Surface Impoundment Name | N.O.R. No. | Waste Nos.[1] | Rated Capacity | Dimensions[2] | Distance from lowest liner to groundwater | Action Leakage Rate (if required) | Unit will manage CCR Waste and non-CCR Waste (state all that apply) |
|---|---|---|---|---|---|---|---|---|
| 011 | FGD Pond A | 011 | 1 | 172 acre-feet | 875 ft x 500 ft x 28 ft<br>9.4 acres | >5 feet | N/A | FGD gypsum |
| 012 | FGD Pond B | 012 | 1 | 104 acre-feet | 640 ft x 700 ft x 15 ft<br>11.3 acres | <5', see location restriction report, Section 2.0, last paragraph | N/A | FGD gypsum |
| 013 | FGD Pond C | 013 | 1 | 218 acre-feet | 1200 ft x 550 ft x 22 ft<br>17 acres | >5 feet | N/A | FGD gypsum |

| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |

* This number should match the Registration Unit No. given on Table V.A.
**FGD Pond A currently being retrofitted.

**Table V.J. – Inspection Schedule of Surface Impoundments**

| Facility Unit(s) and Basic Elements | Possible Error, Malfunction, or Deterioration | Frequency of Inspection |
|---|---|---|
| 011-FGD Pond A, 012-FGD Pond B, and 013-FGD Pond C | | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a). |
| Above-grade piping | Deteriorating of piping/connections | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a). |
| Truck Access Ramp | Spills, Deterioration | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a)., spills inspected and reported within 24-hrs |
| Containment Dike | Spills, excessive water levels, surface cracking, animal burrows, misalignments, slides, vegetative cover, rutting, erosion, seepage, slope protection/chutes | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a)., spills inspected and reported within 24-hrs |
| Instrumentation | Monitor water level | Unit instrumentation (water level gauge) is inspected and monitored at intervals not exceeding 30 days per 40 CFR 257.83(a)(1)(iii). |
| Groundwater | Deterioration of pads, bollards, missing locks, compromise of casing integrity | Semi-Annual Inspection |
| 011-FGD Pond A, 012-FGD Pond B, and 013-FGD Pond C | | Annually per 40 CFR 257.83(b) |
| | Inspect for any changes in geometry of the structure since the previous annual inspection. | Annual Inspection |
| | Evaluate the approximate minimum, maximum, and present depth and elevation of the impounded water and CCR since previous annual inspection. | Annual Inspection |
| | Evaluate the storage capacity at the time of the inspection. | Annual Inspection |
| | Estimate the approximate volume of the impounded water and CCR contained in the unit at the time of the inspection. | Annual Inspection |
| | Inspect for any other change(s) which have affected the stability or operation of the CCR unit since the previous inspection | Annual Inspection |

| | | | | |

[1] The concentration limit is the basis for determining whether a release has occurred from the CCR unit/area.

**Table VII.A.1. – Unit Closure**

For each unit to be registered, list the unit components to be decontaminated, the possible methods of decontamination, and the possible methods of disposal of wastes and waste residues generated during unit closure.

| Equipment or CCR Unit | Possible Methods of Decontamination[1] | Possible Methods of Disposal[1] |
|---|---|---|
| 010-Ash Landfill 1 | Close in Place | No disposal |
| 011-FGD A Pond Piping | Removal | Landfill |
| 011-FGD A Pond | Close in Place | No disposal |
| 012-FGD B Pond Piping | Removal | Landfill |
| 012-FGD B Pond | Close in Place | No disposal |
| 013-FGD C Pond Piping | Removal | Landfill |
| 013-FGD Pond | Close in Place | No disposal |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

1 Applicants may list more than one appropriate method.

**Table VII.A.2. – CCR Units Under Alternative Closure Notification**

| Registered Unit No. | N.O.R. Unit No. | Unit Description[1,2] | Date of Receipt of Last Waste[3] | Date of Closure Notification[3] |

| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

1 As units are added or deleted from these tables through future registration amendments, the remaining itemized unit costs should be updated for inflation when re-calculating the revised total cost in current dollars.

**Table VIII.B. – Post-Closure Period**

| Unit Name | Date Certified Closed | Authorized Post-Closure Period (Yrs.) | Earliest Date Post-Closure Ends (See Note 1) |
|---|---|---|---|
| **[Unit Example 1]** | **[1/1/1995]** | 30 years | **[1/1/2025]** |
| **[Unit Example 2]** | **[1/1/1990]** | 30 years | **[1/1/2020]** |
| **[Unit Example 3]** | **[1/1/1984]** | 30 years | **[1/1/2014]** |

Note 1 – Post-Closure Care shall continue beyond the specified date until the Executive Director has approved the applicant's request to reduce or terminate the post-closure period, consistent with 30 TAC §352.1241 – Post-Closure Care Requirements.

N/A

## Texas Commission on Environmental Quality

**Registration Application for Coal Combustion Residuals (CCR) Waste Management**

# I. General Information

## 1. Reason for Submittal

Type of Registration Application

☐ New ☐ Major Amendment ☐ Minor Amendment

☒ Notice of Deficiency (NOD) Response ☐ Transfer ☐ Name Change

☐ Other

## 2. Application Fees

☒ $150 Application Fee

Payment Method

☐ Check ☒ Online through ePay portal <www3.tceq.texas.gov/epay/>

If paid online, enter ePay Trace Number: 582EA000467512

## 3. Facility Information

*Facility information must match regulated entity information on the Core Data Form.*

Applicant: ☐ Owner ☐ Operator ☒ Owner/Operator

Facility TCEQ Solid Waste Registration No: 32043

Facility EPA ID: TXD000728956

Regulated Entity Reference No. (if issued): RN100216191

Facility Name: OAK GROVE STEAM ELECTRIC STATION

Facility (Area Code) Telephone Number: 214-875-8338

Facility physical street address (city, state, zip code, county): 8127 OAK GROVE ROAD, FRANKLIN, TX, 77856, ROBERTSON

Facility mailing address (city, state, zip code, county): 6555 SIERRA DR, DALLAS, TX 75039, DALLAS

Latitude (Degrees, Minutes Seconds): 31° 11′ 06″

Longitude (Degrees, Minutes Seconds): 96° 29′ 07″

## 4. Publicly Accessible Website

Provide the URL address of a publicly accessible website where the owner or operator of a CCR unit will post information.
https://www.luminant.com/ccr/

## 5. Facility Landowner(s) Information

Facility landowner(s) name: OAK GROVE MANAGEMENT COMPANY LLC

Facility landowner mailing address: 6555 SIERRA DR

City: Irving State: TX Zip Code: 75039

(Area Code) Telephone Number: 214-875-8338

Email Address (optional):

## 6. CCR Waste Management Unit(s)

☒ Landfill Unit(s) ☒ Surface Impoundment(s)

For each existing landfill, new landfill and lateral expansion, existing surface impoundment, and new surface impoundment and lateral expansion(s) provide information on type of waste, the registered unit(s) in which they are managed, and sampling and analytical methods.

Submit the following tables:

Table I.6. – CCR Waste Management Units

Table I.6.A. – Waste Management Information

Table I.6.B. – Waste Managed in Registered Units

Table I.6.C. – Sampling and Analytical Methods

## 7. Description of Proposed Activities or Changes to Existing Facility

Provide a brief description of the proposed activities if application is for a new facility, or the proposed changes to an existing facility or registration conditions, if the application is for an amendment.

Oak Grove Management Company, LLC (Oak Grove) operates the Oak Grove Steam Electric Station (OGSES), which is located approximately 10 miles north of the town of Franklin in Robertson County, Texas. The OGSES consists of two coal/lignite-fired units with a combined operating capacity of approximately 1600 megawatts. Coal combustion residuals (CCR) including fly ash, bottom ash, and flue gas desulfurization (FGD) gypsum are generated as part of OGSES unit operation. The Texas Commission on Environmental Quality (TCEQ) Solid Waste Registration Number (SWR No.) for the OGSES is 32043. CCR is managed in one onsite landfill, Ash Landfill 1, and three surface impoundments, FGD-A, FGD-B, and FGD-C.

Ash Landfill 1 is the primary disposal facility for CCR generated at the OGSES and is located approximately 1200 feet southwest of the OGSES. Ash Landfill 1 is listed on the Notice of Registration (NOR) for the OGSES as Unit No. 010 and is regulated as a Class 2 non-hazardous industrial solid waste landfill under 30 TAC §335.

Gyspum/scrubber sludge that cannot be recycled and selected process wastewaters are managed in FGD-A, FGD-B, and FGD-C ponds. These ponds are collectively referred to as the FGD Ponds. Solids from the FGD Ponds are routinely removed as part of on-going operations and maintenance activities. These solids are placed in Ash Landfill 1 (WMU 010). The FGD Ponds are located approximately 1500 feet northwest of the OGSES. The FGD Ponds are list on the NOR for the OGSES as waste management units 011 (FGD-A), 012 (FGD-B), and 013 (FGD-C). The FGD Ponds are regulated as Class 2 non-hazardous surface impoundments under 30 TAC §335.

## 8. Primary Contact Information

Contact Name: Renee Collins Title: Sr. Director, Environmental Services

Contact mailing address: 6555 Sierra Drive
City: Irving County: Dallas State: Texas Zip Code: 75039
(Area Code) Telephone Number: 214-875-8338

Email Address (optional): renee.collins@luminant.com

## 9. Notice Publishing

Party responsible for publishing notice:
☒ Applicant ☐ Consultant ☐ Agent in Service

Contact Name: Renee Collins Title: Sr. Director, Environmental Services

Contact mailing address: 6555 Sierra Drive
City: Irving County: Dallas State: Texas Zip Code: 75039
(Area Code) Telephone Number: 214-875-8338

## 10. Alternative Language Notice

Is an alternative language notice required for this application? For determination, refer to Alternative Language Checklist on the Public Notice Verification Form (TCEQ-20244-Waste-NORI).

☐ Yes ☒ No

## 11. Public Place Location of Application

Name of the Public Place: Robertson County Carnegie Library
Physical Address: 315 East Dechard Street
City: Franklin County: Robertson State: TX Zip Code: 77856
(Area code) Telephone Number: 979-828-4331

## 12. Ownership Status of the Facility

☐ Corporation ☐ Limited Partnership
☐ Sole Proprietorship ☐ General Partnership ☒ Other (specify): Limited Liability Company

Does the Site Owner (Permittee/Registrant) own all the CCR units and all the facility property?

☒ Yes ☐ No

## 13. Property / Legal Description Information

Provide a legal description and supporting documents of the property where the management of CCR waste will occur; including a survey plat and a boundary metes and bounds description (30 TAC §352.231(g)).

Submit the following documents:

a. Property Legal Description
b. Property Metes and Bounds Description
c. Metes and Bounds Drawings
d. On-Site Easements Drawings

See APPENDIX A for Property/Legal Description Information for the following CCR units:
Ash Landfill 1
FGD Pond A
FGD Pond B
FGD Pond C

Property Owner Affidavit also located in APPENDIX A.

## 14. Operator Information

Identify the entity who will conduct facility operations, if the owner and operator are not the same.

Operator Name: Same as Owner

Operator mailing address:

City: State: Zip Code:

(Area Code) Telephone Number:

Email Address (optional):

## 15. Confidential Documents

Does the application contain confidential documents?

☐ Yes ☒ No

If "Yes", cross-reference the confidential documents throughout the application and submit as a separate attachment in a binder clearly marked "CONFIDENTIAL."

## 16. Permits and Construction Approvals

| Permit or Approval | Received | Pending | Not Applicable |
|---|---|---|---|
| Hazardous Waste Management Program under the Texas Solid Waste Disposal Act | ☒ | ☐ | ☐ |
| Underground Injection Control Program under the Texas Injection Well Act | ☐ | ☐ | ☒ |
| National Pollutant Discharge Elimination System Program under the Clean Water Act and Waste Discharge Program under Texas Water Code, Chapter 26 | ☒ | ☐ | ☐ |
| Prevention of Significant Deterioration Program under the Federal Clean Air Act (FCAA). | ☒ | ☐ | ☐ |
| National Emission Standards for Hazardous Air Pollutants Preconstruction Approval under the FCAA | ☐ | ☐ | ☒ |
| Other (describe): | ☐ | ☐ | ☐ |
| Other (describe): | ☐ | ☐ | ☐ |
| Other (describe) | ☐ | ☐ | ☐ |

## 17. Legal Authority

The owner and operator of the facility shall submit verification of their legal status with the application. This shall be a one-page certificate of incorporation issued by the secretary of state. The owner or operator shall list all persons having over a 20% ownership in the facility.

See APPENDIX A for Certificate of Authority.

## 18. TCEQ Core Data Form

The TCEQ requires that a Core Data Form (TCEQ-10400) be submitted on all incoming applications, unless a Regulated Entity and Customer Reference Number has been issued by the TCEQ and no core data information has changed. For more information regarding the Core Data Form, call (512) 239-5175 or visit the TCEQ Website.

See APPENDIX A for TCEQ Core Data Form.

## 19. Other Governmental Entities Information

**Coastal Management Program**

Is the facility within the Coastal Management Program boundary?

☐ Yes ☒ No

**Local Government Jurisdiction (If Applicable)**
Within City Limits of: N/A
Within Extraterritorial Jurisdiction of: N/A

Is the facility located in an area in which the governing body of the municipality or county has prohibited the storage, processing or disposal of municipal or industrial solid waste?

☐ Yes ☒ No If "Yes", provide a copy of the ordinance or order as an attachment.

## 20. Attachments

Does the application include the following?

| | | |
|---|---|---|
| General Maps | ☒ Yes | ☐ No |
| General Topographic Map | ☒ Yes | ☐ No |
| Facility Layout Map | ☒ Yes | ☐ No |
| Surrounding Features Map | ☒ Yes | ☐ No |
| Process Flow Diagram | ☒ Yes | ☐ No |
| Land Ownership Map | ☒ Yes | ☐ No |
| Land Ownership List | ☒ Yes | ☐ No |
| Pre-printed Mailing Labels | ☒ Yes | ☐ No |

Maps and drawings shall be legible and easily readable by eye without magnification. Scales and paper size shall be chosen based on the type of map submitted, the land area covered, and the amount of detail to be shown. See instructions for details regarding maps and drawings to be submitted in application.

See APPENDIX A for Attachments detailed in Item 20.

Per TCEQ request, a Process Flow Narrative has been included at the end of the Attachments found in APPENDIX A.

## 21. Verification of Compliance

Does the owner and operator verify that the design, construction, and operation of CCR landfill(s) and surface impoundment(s) meets the requirements of 30 TAC §352.231(f) (30 TAC §352.2; 40 CFR §257.52, and 40 CFR §§257.3-1 – 257.3-3).

☒ Yes ☐ No

As requested by TCEQ, please see the "Response to TCEQ CCR Unit Registration Comments" memorandums for Ash Landfill 1 and FGD Ponds provided by Golder in APPENDIX A.

# II. Location Restrictions and Geology

See Instructions and Technical Guidance

## 22. Location Restrictions

Submit certifications and technical reports demonstrating compliance of CCR unit(s) with applicable location restrictions (30 TAC 352, Subchapter E) and comply with 30 TAC §352.231(d) and 30 TAC §352.4 for submission of engineering and geoscientific information.

A. **Placement above the uppermost aquifer** (30 TAC §352.601) (40 CFR §257.60). For those CCR units whose base is less than five feet above the upper limit of the uppermost aquifer, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.60(a) – (c).

B. **Wetlands** (30 TAC §352.611) (40 CFR §257.61). For CCR units located in wetlands, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.61(a) – (c).

C. **Fault areas** (30 TAC §352.621) (40 CFR §257.62). For CCR units located within 200 feet of the outermost damage zone of a fault, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.62(a) – (c).

D. **Seismic impact zones** (30 TAC §352.631) (40 CFR §257.63). For CCR units located in a seismic impact zone, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.63(a) – (c).

E. **Unstable areas** (30 TAC §352.641) (40 CFR §257.64). For CCR units located in unstable areas, please submit a copy of the demonstration showing evidence of compliance with 40 CFR §257.64(a) – (d).

Location Restriction Demonstration reports for Ash Landfill 1 and FGD Ponds located in APPENDIX B. Location Restriction Evaluation memorandums also located in APPENDIX B.

### 23. Geology Summary Report

Submit a summary of the geologic conditions at the facility, including the relation of the geologic condition to each CCR unit. The summary must include enough information and data and include sources and references for the information. Include all groundwater monitoring data required by 40 CFR Part 257, Subpart D, (30 TAC §352.241, §352.601, §352.621, §352.631, and §352.641) and submitted in accordance of 30 TAC §352.4.

**Note:** Previously prepared documents may be submitted but must be supplemented or updated as necessary to provide the requested information (30 TAC §352.241(b)).

For Geology Summary, please refer to "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F. The Local Geology and Hydrogeology summary is located in Section 2.2 of each report.

All groundwater monitoring data summarized in "2020 Annual Groundwater Monitoring and Corrective Action Report" for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## III. Fugitive Dust Control Plan

### 24. Fugitive Dust Control Plan

A. **Submit a copy of the CCR Fugitive Dust Control Plan** (30 TAC §352.801) (40 CFR §257.80(b)), or the most recently amended plan. The initial plan or subsequent amended plan must be certified by a qualified Texas licensed professional engineer (Texas P.E.) that the plan meets the requirements of 30 TAC Chapter 352.

B. **Submit the most recent Annual CCR Fugitive Dust Control Report** (30 TAC §352.801) (40 CFR §257.80(c)) and include the report information.

CCR Fugitive Dust Control Plan and the 2021Annual CCR Fugitive Dust Control Report located in APPENDIX C.

# IV. Landfill Criteria

See Instructions and Technical Guidance – No. 30 Coal Combustion Residuals Landfill

## 25. Landfill(s) for CCR Waste

Provide the following information below if there is a landfill; if there is more than one landfill, separate information is required for each landfill.

### A. Landfill Characteristics

Describe the design, installation, construction, and operation of the landfill and submit a completed Table IV.A. – Landfill Characteristics.

Ash Landfill 1 consists of four landfill cells (Cells 1 through 4), each constructed with a 3-foot thick compacted clay liner (hydraulic conductivity ≤ 1×10-7 cm/sec). The landfill is constructed above-grade and is surrounded by an earthen perimeter berm that are also provided with a 3-foot-thick compacted clay liner. CCR placement extends above the top of the perimeter berms and the sides of the CCR placed above the berms are graded to slopes of approximately 3H:1V.
Ash Landfill 1 has been in operation since 2008. The current status of Cells 1 through 4 is as follows:

- Cell 1 has received CCR and is inactive. A final cover consisting of a 3-ft thick clay soil (hydraulic conductivity ≤ 1×10-7 cm/sec) overlain with 1.5-ft thick vegetative cover was placed over Cell 1 in 2015.
- Cell 2 has received CCR and is inactive. A final cover consisting of a 40-mil linear low-density polyethylene (LLDPE) geomembrane overlain with a geosynthetic drainage layer and 18 inches of soil was placed over Cell 2 in 2019.
- Cell 3 is active and used for CCR (primarily bottom ash) disposal.
- ~~Cell 4 is active and used for temporary storage of FGD gypsum from the OGSES FGD Ponds prior to sale for reuse. The eastern portion of Cell 4 is currently used to manage contact water.~~ Cell 4 is active and used for CCR (primarily FGD gypsum) disposal. The eastern portion of Cell 4 is currently used to manage contact water.

### B. Liner Design

1. For existing landfills, provide attachments describing how the facility will comply with 30 TAC 352, Subchapter F (Design Criteria).

   Ash Landfill 1 is an Existing CCR Landfill as defined by the CCR rule. There are no design criteria for Existing CCR Landfills in either the state or federal CCR rule. 30 TAC 352, Subchapter F or 40 CFR 257.70

2. For new landfills or lateral expansions of existing landfills, submit pages describing how the facility will comply with 30 TAC §352.261 and 30 TAC §352.701. N/A

3. Complete Table IV.B. - Landfill Liner System and specify the type of liner used for the landfill.

4. Provide attachments describing the design, installation, and operation of the liner and leak detection system. The description must demonstrate that the liner and leak detection system will prevent discharge to the land, groundwater, and surface water. Submit a quality assurance project plan (QAPP) to ensure that each analysis is performed appropriately.

The following Soil Liner Evaluation Reports (SLERs) are located in APPENDIX D for the construction of cells 1-4 of Ash Landfill 1:
SLER-Phase 1 Ash Landfill
SLER-Cell 1 West Dike Clay Liner Construction
SLER-Cell 2 Ash Landfill
SLER-Cell 3 Ash Landfill
SLER-Cell 4 Ash Landfill

**C. Leachate Collection and Removal**

Submit design information and description of leachate collection and removal system in accordance with 30 TAC §352.701. N/A

Complete Table IV.C. - Landfill Leachate Collection System. N/A

**D. Design of Liner and Leachate Collection and Removal System.**

For a new landfill or lateral expansion of a CCR landfill, provide a qualified Texas P.E. certification and technical report that the design of the liner and the leachate collection and removal system meets the requirements of 30 TAC §352.711. N/A

**E. Run-on and Run-off Controls**

At time of application, attach pages describing how the facility will comply with the run-on and run-off system plan for an existing, new, or lateral expansion of a CCR landfill information. Provide a qualified Texas P.E. certification and technical report that the run-on and run-off control system plans meet the requirements of 30 TAC §352.811.

"Run-on and Run-off Control System Plan" for Ash Landfill 1 is located in APPENDIX D.

**F. Inspection for Landfills**

At time of application, attach pages describing how the facility will comply 30 TAC §352.841 and complete Table IV.D. – Inspection Schedule for Landfills. For existing CCR landfills, provide the most recent inspection report. All CCR landfills and any lateral expansions of a CCR landfill must be inspected for any structural weakness, malfunction, deterioration conditions which are disrupting or have the potential to disrupt the operation or safety of the CCR unit, or any other conditions which may cause harm to human health and environment at a frequency specified in 40 CFR §257.84(a) and (b).

The 2021 Annual CCR Landfill inspection report is located in APPENDIX D.

# V. Surface Impoundment Criteria

See Instructions and Technical Guidance – No. 31 Coal Combustion Residuals Surface Impoundment

## 26. Surface Impoundment(s) for CCR Waste

Provide the following information below if there is a surface impoundment; if there is more than one surface impoundment, separate information is required for each surface impoundment.

**A. General Surface Impoundment(s) Characteristics**

Provide information about the characteristics of the surface impoundment(s): incised, surface area (acres), storage volume (acres-feet), and depth (feet).

For all surface impoundment(s), include the following information:

1. Complete Table V.A. - Surface Impoundments Characteristics. List the surface impoundment(s) to be registered as a CCR unit(s), the wastes managed in each unit, and the rated capacity or size of each unit.

2. Describe the surface impoundment(s) and provide a plan view drawing with cross-sections, if available.

   See "History of Construction" report in APPENDIX E. A summary description of the impoundments is located in Section 3.5 and drawings are included in Attachment 1. "History of Construction-Addendum No. 1" in APPENDIX E provides updates on the completed retrofit of FGD Pond A.

   ~~Please note that FGD Pond A is currently being retrofitted, detailed construction plans can also be found in APPENDIX E.~~

3. Specify the minimum freeboard to be maintained and the basis of the design to prevent overtopping resulting from normal or abnormal operation; overfilling; wind and wave action; rainfall; run-on; malfunctions of level controllers, alarms, and other equipment; and human error. Show that adequate freeboard will be available to prevent overtopping from a 100-year, 24-hour storm.

   Minimum freeboard of 2 feet in FGD-A and FGD-B and minimum freeboard 3 feet in FGD-C. See "Inflow Design Flood Control System Plan", Section 2.4 for FGD Ponds in APPENDIX E.

~~3.~~4. Waste Flow
Describe the means that will be used to immediately shut off the flow of waste to the impoundment in the event of liner failure or to prevent overtopping.

All inflows are controlled via pumps under controlled conditions, see "Inflow Design Flood Control System Plan", Section 2.0 for FGD Ponds in APPENDIX E.

~~4.~~5. Dike Construction ☒ Yes ☐ No

~~N/A-Section not required per TCEQ due to Structural Stability Assessment requirement.~~

If Yes, submit the dike certification (located at the end of the application).

In October 2016, the initial certified Periodic Hazard Potential Classification Assessments, Periodic Structural Stability Assessments, and Periodic Safety Factor Assessments were completed for each FGD Pond (FGD-A, FGD-B, FGD-C) as required by 40 CFR 257.73(a), 257.73(d), and 257.73(e). In October 2021, the certified 5-Year Updates to these assessments were completed as required by 40 CFR 257.73 and 30 TAC 352.731, which identified no structural deficiencies. The most recent 2021 5-Year Assessment Updates are located in APPENDIX E. Based on the conclusion in the certified 5-year updates that no structural deficiencies exist, the facility is submitting these documents in lieu of the Dike Certification.

The structural integrity of the dike system must be certified by a qualified Texas P.E. before the registration is issued. If the impoundment is not being used, the dike system must be certified before it can be put into use. The certification must be sealed by a qualified Texas P.E., along with the engineering firm's name and registration number (30 TAC §352.4).

A report shall accompany the dike certification which summarizes the activities, calculations, and laboratory and field analyses performed in support of the dike certification. Describe the design basis used in construction of the dikes. A QAPP should be included in the report to ensure that each analysis is performed appropriately and include:

(1) Slope Stability Analysis

(2) Hydrostatic and Hydrodynamic Analysis

(3) Storm Loading

(4) Rapid Drawdown

Earthen dikes should have a protective cover to minimize wind and water erosion and to preserve the structural integrity of the dike. Describe the protective cover used and describe its installation and maintenance procedures.

**B. Liner Design**

For surface impoundment(s), provide information about how the facility will comply with 30 TAC §352.711 for existing CCR surface impoundments. For new and lateral expansion of CCR surface impoundments provide information on how the facility will comply with 30 TAC §352.261, and 30 TAC §352.721, see Instructions and Technical Guidance No. 31 Coal Combustion Residuals Surface Impoundment. The qualified Texas P.E. must certify that the design of the liner complies with the requirements of 30 TAC Chapter 352 and 40 CFR Part 257, Subpart D, where required.

Is the CCR surface impoundment unlined? ☒~~☐~~ Yes ☐ No

FGD Pond A, FGD Pond B, and FGD Pond C are lined per 40 CFR § 257.71.

~~FGD Pond A does not meet the liner requirement in 40 CFR § 257.71. FGD Pond A was removed from service prior to April 11, 2021, and is currently in the retrofit process. The Retrofit Plan and the Intent to Retrofit Notification are located in APPENDIX E.~~

If "Yes", the CCR unit is subject to the closure requirements under 30 TAC Chapter 352 and 40 CFR §257.101(a) to retrofit or close. A notification must be prepared stating that an assessment of corrective measures has been initiated.

1. Complete Table V.B. - Surface Impoundment Liner System for each surface impoundment to be registered.
2. Describe the design, installation and operation of liner and leak detection components. The description must demonstrate that the liner and leak detection system will prevent discharge to the land and surface water. Submit a QAPP report to ensure that each analysis is performed appropriately.

   See "History of Construction" and "History of Construction-Addendum No.1" reports for all ponds. Also see ~~and~~ "Construction Completion and Quality Assurance Report" for FGD-A and "Liner Evaluation Reports" for FGD-B and FGD-C~~each surface impoundment (FGD-A, FGD-B, FGD-C)~~ in APPENDIX E. ~~As noted previously, FGD-A ceased receipt of waste prior to April 11, 2021 and will be retrofitted with a compliant liner by early 2022. The "History of Construction" and "Liner Evaluation Report" report reflects the previous liner system in FGD-A. A liner evaluation report for FGD-A is not yet available so the construction design plans have been included in APPENDIX E for review.~~
3. For new or laterally expansions of existing surface impoundments, provide a subsurface soil investigation report that must include:

a. A description of all borings drilled, at the unit location, to test soils and characterize groundwater;

b. A unit map drawn to scale showing the surveyed locations and elevations of the borings, including location of permanent identification markers ((30 TAC §352.731) and (40 CFR §257.73(a)(1));

c. Cross-sections prepared from the borings depicting the generalized strata at the unit;

d. Boring logs, including a description of materials encountered, and any discontinuities such as fractures, fissures, slickensides, lenses or seams;

e. A description of the geotechnical data and the geotechnical properties of the subsurface soil materials, including the suitability of the soils and strata for the intended uses; and

f. A demonstration that all geotechnical tests were performed in accordance with industry practices and recognized procedures.

N/A

**C. Hazard Potential Classification**

Provide the current hazard potential classification assessment and associated documentation, as required by 30 TAC §352.731 or §352.741 and 40 CFR §257.73(a)(2) or §257.74(a)(2). The qualified Texas P.E. must certify that the initial hazard potential classification and any subsequent periodic classification was conducted in accordance with the requirements of 30 TAC Chapter 352, where required.

Hazard Potential Classification: **LOW**

See “Hazard Potential Classification Assessment” located in APPENDIX E.

**D. Emergency Action Plan for High or Significantly High Hazard Potential**

Provide the current Emergency Action Plan that has been certified by a qualified Texas P.E. and includes the following requirements from 30 TAC 352, Subchapter F and 40 CFR §257.73(a)(3)(i)(A) - (E) or 40 CFR §257.74 (a)(3)(i)(A) - (E). The qualified Texas P.E. must certify that the written Emergency Action Plan and any subsequent amendment of the plan complies with the requirements of 30 TAC 352, Subchapter F, where required.

N/A

Complete Table V.J. - Inspection of Surface Impoundments

**E. Inflow Design Flood Control System Plan**

Describe how the surface impoundment(s) system will manage stormwater run-on away from the surface impoundment(s) (30 TAC §352.821 and 40 CFR §257.82(a) and (c)). Stormwater run-on must be diverted away from a surface impoundment, based on the hazard potential. Where dikes are used to divert run-on, they must be protected from erosion. Include all analyses used to calculate run-on volumes. Provide the inflow design flood control system plan. Provide qualified Texas P.E. certification that the initial and periodic inflow design flood control system plans meet the requirements of 30 TAC §352.821, where required.

See “Inflow Design Flood Control System Plan” located in APPENDIX E.

**F. History of Construction for Existing CCR Surface Impoundment(s), or the Design and Construction Plans for New and Lateral Expansions**

Provide information on the history of construction for each existing CCR surface impoundment (30 TAC §352.731 and 40 CFR §257.73(c)) or the design and construction plans for new and lateral expansions of each CCR surface impoundment (30 TAC §352.741) and (40 CFR §257.74(c)).

See "History of Construction" and "History of Construction-Addendum No. 1" ~~report~~ in APPENDIX E.

**G. Structural Stability Assessment**

Provide the most recent structural stability assessment of the surface impoundments. Include the combined capacity of all surface impoundment spillways with calculations; the peak discharge the unit must meet for all combined spillways; probable maximum flood-high hazard, 1,000-yr-significant high hazard, 100-yr-low hazard; identify if there were any structural stability deficiencies in last assessment; identify how these deficiencies were managed and corrected; and qualified Texas P.E. certification. The structural stability assessment must include all information required in 30 TAC §352.731 for existing surface impoundments or 30 TAC §352.741 for new or laterally expanding surface impoundments.

See "Structural Stability Assessment" located in APPENDIX E.

**H. Safety Factor Assessment**

The current safety factor assessment must be submitted with the application. It must include documentation that demonstrates whether the calculated factors of safety for each CCR surface impoundment achieve the minimum safety factors specified in 30 TAC 352, Subchapter F and 40 CFR §257.73(e)(1)(i) - (iv) and 40 CFR §257.74(e)(1)(i) - (iv) for the critical cross-section of the embankment. The critical cross-section is the cross-section anticipated to be the most susceptible to structural failure based on appropriate engineering considerations, including loading conditions. The safety factor assessments must be supported by appropriate engineering calculations and certified by a qualified Texas P.E.

See "Safety Factor Assessment" located in APPENDIX E.

# VI. Groundwater Monitoring and Corrective Action (30 TAC 352, Subchapter H)

See Instructions and Technical Guidance – No. 32 Coal Combustion Residuals Groundwater Monitoring and Corrective Action

## 27. Groundwater Monitoring System

**A.** Complete Table VI.A. - Unit Groundwater Detection Monitoring System.

**B.** Provide a map showing location of wells, groundwater elevations, and groundwater flow direction.

See Groundwater Potentiometric Surface Maps in Appendix C of the "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

**C.** Provide attachments describing how the facility will comply with the requirements in 30 TAC §352.911 and provide a certification by a qualified Texas P.E or qualified Texas P.G. that the groundwater monitoring system design and construction meet the requirements of 30 TAC Chapter 352.

See "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

**D.** Provide a figure showing the geologic units and fill materials overlying the uppermost aquifer, materials comprising the uppermost aquifer, and materials comprising the confining unit defining the lower boundary of the uppermost aquifer, including, but not limited to, thicknesses, stratigraphy, lithology, hydraulic conductivities, porosities and effective porosities.

See Figures 3,4,5 in the "Groundwater Monitoring System Certification" report for Ash Landfill 1 located in APPENDIX F.

See Figures 3, 4,5,6 in the "Groundwater Monitoring System Certification" report for FGD Ponds located in APPENDIX F.

**E.** For a multiunit groundwater monitoring system, demonstrate that the groundwater monitoring system will be equally as capable of detecting monitored constituents at the waste boundary of the CCR unit as the individual groundwater monitoring system for each CCR unit by providing at minimum the following information:

1. Number, spacing, and orientation of each CCR unit;
2. Hydrogeologic setting; and
3. Site history.

See "Groundwater Monitoring System Certification" report for FGD Ponds located in APPENDIX F.

**F.** Has there been any sampling concentrations of one or more constituents listed in Appendix IV detected at statistically significant levels above the groundwater protection standard (GWPS)? ☒ Yes ☐ No

FGD Ponds

**G.** Provide information on how monitoring wells have been constructed and cased in a manner that maintains the integrity of the monitoring well borehole and to prevent contamination of samples and the groundwater.

See Appendix A in the "Groundwater Monitoring System Certification" reports for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## 28. Groundwater Monitoring Sampling and Analysis Program

Provide a sampling and analysis plan that includes procedures and techniques; sampling and analytical methods that are appropriate for groundwater sampling; and that address the requirements of 30 TAC §352.931 and 40 CFR §257.93. Provide a P.E or P.G. certification that describes the statistical method selected to evaluate the groundwater monitoring data and certifies that the selected statistical method is appropriate for evaluating the groundwater monitoring data for the CCR management area. Refer to TG-32 for information and guidance.

See "Groundwater Monitoring Plan-Revision 2" and "Statistical Analysis Plan-Revision 1" for Ash Landfill 1 and FGD Ponds located in APPENDIX F.

## 29. CCR Unit(s) in a Detection Monitoring Program

Does the facility have CCR unit(s) in a Detection Monitoring Program?

☒ Yes ☐ No

Ash Landfill 1

If "Yes", Submit the following information:

**A.** Submit Table VI.C. – Facility CCR Units Under Detection Monitoring.

**B.** Provide a Background Evaluation Report.

Background data was derived from the eight independent sampling events required under 40 CFR 257.94(b). A summary of the background monitoring program can be found in Section 3.0 of the "2017 Annual Groundwater Monitoring Report". Background water quality data is summarized in Tables 3 and 4 and laboratory analytical reports are located in Appendix A of the 2017 report.

The "2017 Annual Groundwater Monitoring Report" for Ash Landfill 1 is in APPENDIX F.

**C.** Provide a report with the results of semiannual monitoring events.

~~See the~~The "2020 Annual Groundwater Monitoring and Corrective Action Report" and the "2021 Annual Groundwater Monitoring and Corrective Action Report-Revision 1" for Ash Landfill 1 is in APPENDIX F.

1. Has a statistically significant increase (SSI) been detected for one or more of the constituents listed in Appendix III at any monitoring well?

   ☒ Yes ☐ No

2. Has a notification to the executive director been sent within 14 days?

   ☒ Yes ☐ No

3. Date assessment monitoring program will start: N/A Due to successful ASDs

4. Do you plan to provide an alternative source demonstration (ASD)?

   ☒ Yes ☐ No

## 30. CCR Unit(s) in an Assessment Monitoring Program

Does the facility have CCR unit(s) in an Assessment Monitoring Program?

☒ Yes ☐ No

FGD Ponds

If "Yes", Submit information related for units.

**A.** Complete Table VI.D. – CCR Units Under Assessment Monitoring.

**B.** Provide, for each well in assessment monitoring status, the recorded concentrations lab sheets and results in a tabulated form.

See summary tables 3 and 4 for all results in tabulated form in the "2020 Annual Groundwater Monitoring and Corrective Action Report" for the FGD Ponds in APPENDIX F. The "2021 Annual Groundwater Monitoring and Corrective Action Report-Revision 1" for the FGD Ponds is also in APPENDIX F.

**C.** Have the concentrations of all constituents listed in Appendices III and IV been at or below background values, using the statistical procedures in 30 TAC §352.931 and 40 CFR §257.93(g), for two consecutive sampling events for the CCR unit(s)? ☐ Yes ☒ No

If answer to above is yes, detection monitoring may resume. The owner or operator must prepare a notification stating that detection monitoring is resuming for the CCR unit and obtain written approval from the executive director.

**D.** Are there any concentrations of any constituent in Appendices III and IV above background values? ☒ Yes ☐ No

1. Has a notification to the executive director been sent within 14 days?

   ☒ Yes ☐ No

**E.** Date assessment of corrective measures will be initiated (must be within **90 days** of finding a statistically significant level above the GWPS) for the CCR unit(s):
April 8, 2019

**F.** Will you provide an ASD (see TG-32 for an acceptable submittal)? ☐ Yes ☒ No

**G.** Date assessment of corrective measures will be initiated if ASD is not accepted?
N/A

**H.** Complete Table VI.D-2. - Groundwater Detection Monitoring Parameters

**Note**: Refer to TG-32 regarding establishing a GWPS for each constituent in Appendix IV detected in the groundwater and attach as table.

**I.** Have you completed the assessment of corrective measures? ☒ Yes ☐ No
If "Yes", date assessment of corrective measures was completed: September 5, 2019
If "No", date assessment of corrective measures will be completed:
Expected date of submittal of amendment (see note below):
Provide completed assessment of corrected measures materials.

"CCR Assessment of Corrective Measures-Revision 1" dated May 2021 can be found in APPENDIX F.

**Note**: Within **30 days** of completing the assessment of corrective measures, and before remedy implementation, the owner or operator shall submit an application for amendment to the registration. In some circumstance"s, the assessment of corrective measures and selected remedy may be approved as part of the initial application for the CCR unit registration.

**J.** Have you selected a remedy? ☒ Yes ☐ No

"Remedy Selection Report" located in APPENDIX F.

Provide public meeting documentation under 30 TAC §352.961 and a report under 30 TAC §352.971 and 40 CFR §257.97.

"Assessment of Corrective Measures Public Meeting Documents" located in APPENDIX F.

# VII. Closure and Post-Closure Care

## See Instructions and Technical Guidance

Submit a full closure plan and post-closure plan and all information describing how the owner or operator will comply with 30 TAC 352, Subchapter J and 40 CFR §§257.100 - 257.104. The owner of property on which an existing disposal facility is located, following the closure of a unit, must also submit documentation that a notation has

been placed in the deed to the facility that will in perpetuity notify any potential purchasers of the property that the land has been used to manage CCR wastes and its use is restricted (30 TAC §352.1221 and 40 CFR §257.102(i)). For CCR units, closed after October 19, 2015, that were closed before submission of the application, the applicant should submit documentation to show that notices required under 30 TAC 352, Subchapter K and 40 CFR §257.105 or §257.106 have been filed.

## 31. Closure Plan

This section applies to the owners and operators of all CCR units required to be registered. The applicant must close the facility in a manner that minimizes need for further maintenance and controls, or eliminates, to the extent necessary to protect human health and the environment, the post-closure release of CCR waste, chemical constituents of concern, leachate, contaminated rainfall, or waste decomposition products to the groundwater, surface waters, or to the atmosphere.

The type of unit to be closed can determine the level of detail sufficient for a closure plan. CCR units which have been certified closed after October 19, 2015, must provide documentation to demonstrate compliance with state and federal regulations.

For each unit to be registered, complete Table VII.A.1. - Unit Closure and list the CCR Unit components to be decontaminated, possible methods of decontamination, and possible methods of disposal of wastes and waste residues generated during unit closure. All ancillary components must be decontaminated, and the generated waste disposed of appropriately.

See "Closure Plan" and "Closure Plan-Addendum No. 1" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Information about CCR units closed or to be closed under alternative closure requirements must be provided in Table VII.A.2. - CCR Units Under Alternative Closure Notification.

Guidance on design of a closure cap and final cover for non-hazardous industrial solid wastes landfills is provided in EPA publication 530-SW-85-014, TCEQ Technical Guidance No. 3 and TCEQ publication, RG-534, "Guidance for Liner Construction and Testing for a Municipal Solid Waste Landfill".

## 32. Post-Closure Care Plan

Provide a post-closure care plan that complies with the requirements of 30 TAC §352.1241.

See "Post-Closure Plan" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Post-closure care of each CCR unit must continue for at least 30 years after the date of completing closure of the unit and must consist of monitoring and reporting of the groundwater monitoring systems, in addition to the maintenance and monitoring of CCR unit. Continuation of certain security requirements may be necessary after the date of closure. Post-closure use of property on or in which waste remains after closure must never be allowed to disrupt the integrity of the containment system. In addition, submit the following information:

- The name, address, and phone number of the person or office to contact about the CCR unit during the post-closure period; and

  Luminant-Environmental Services
  Renee Collins-Senior Environmental Director
  6555 Sierra Drive
  Irving, TX 75039
  214-875-8338

CCRPostClosurePlan@Luminant.com

- A discussion of the future use of the land associated with each unit.

  See section 5.0 of the "Post-Closure Plans" for Ash Landfill 1 and FGD Ponds in APPENDIX G.

Landfills and surface impoundments which have been certified closed after October 19, 2015, must be included in post-closure care plans, unless they have been determined to have been closed by waste removal equivalent to the closure standards in 30 TAC §352.1221 and 40 CFR §257.102 or 30 TAC §352.1231 and 40 CFR §257.103. If such a demonstration has been made pursuant to 40 CFR §257.102 or §257.103, but an equivalency determination has not been made, please submit a copy of the demonstration documentation. If an equivalency determination has been made, applicant should submit a copy of this determination.

# VIII. Financial Assurance

## 33. Post-Closure Care Cost Estimate

Financial assurance for post-closure care (30 TAC §352.1101) applies to owners or operators of all CCR units, except CCR units from which the owner or operator intends to remove wastes and perform clean closure. Provide a written cost estimate in current dollars of the total cost of the 30-year (or longer, if applicable under 30 TAC §352.1101(d)) post-closure care period to perform post-closure care requirements as prescribed in 30 TAC §352.1241. The cost estimate must be based on the costs of hiring a third party to conduct post-closure care maintenance.

Complete Table VIII.A.1 – Post-Closure Cost Summary for Existing Registered Units

See Post-Closure Care Cost Estimates ~~Memo from Golder~~ in APPENDIX H. Cost estimates for the FGD Pond Area are summarized in Table ~~4~~1. Cost estimates for Ash Landfill 1 are summarized in Table ~~5~~2.

Complete Table VIII.A.2. - Post-Closure Cost Summary for Proposed Registered Units

## 34. Financial Assurance Mechanism

The financial assurance for post-closure care is required in accordance with 30 TAC §352.1101. The applicant shall demonstrate the financial assurance within 90 days after approval of the registration with a financial mechanism acceptable to TCEQ in compliance with 30 TAC §352.1101(c) and 30 TAC §37, Subchapters A through D, except as indicated in 30 TAC §352.1111, in an amount no less than the amount specified in the approved Post-Closure Care Cost Summary. Provide a description of the proposed financial assurance mechanism.

Oak Grove Management Company LLC will provide an acceptable financial assurance mechanism per 30 TAC 352.1101 no more than 90 days after the executive director's approval of the registration.

~~Vistra Corporation currently uses AEGIS Insurance Services Endorsement No. 60 (TCEQ Endorsement for Closure, Post-Closure or Corrective Action) as an approved financial assurance mechanism at other Vistra owned facilities. Applicant intends to add post-closure coverage amounts detailed in Table VIII.A.1. to current policy.~~

Complete Table VIII.B. - Post-Closure Period, for the authorized post-closure period, to meet the requirements of 30 TAC §352.1241(a) through (c).

**Table IV.D. – Inspection Schedule of Landfills**

| Facility Unit(s) and Basic Elements | Possible Error, Malfunction, or Deterioration | Frequency of Inspection |
|---|---|---|
| 010-Ash Landfill 1 | Inspect for any appearances of actual or potential structural weakness and other conditions which are disrupting of have the potential to disrupt the operation and safety of the CCR unit | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a).~~Weekly Inspection per 40 CFR 257.84(a)~~ |
| Embankments | Surface cracking, animal burrows, misalignments, slides, vegetative cover, rutting, erosion, seepage, slope protection/chutes | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a).~~Weekly Inspection~~ |
| Capped Areas | Animal burrows, vegetative cover, rutting, surface cracking | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a).~~Weekly Inspection~~ |
| Active Work Area | Contact water, dusting | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.84(a).~~Weekly Inspection~~ |
| Groundwater Monitoring Wells | Deterioration of pads, bollards, missing locks, compromise of casing integrity | Semi-Annual Inspection |
| | | |
| 010-Ash Landfill 1 | | Annually per 40 CFR 257.84(b) |
| | Inspect for any changed in geometry of the structure since the previous annual inspection. | Annual Inspection |
| | Estimate the approximate volume of CCR contained in the unit at the time of the inspection. | Annual Inspection |
| | Inspect for any appearance of actual or potential structural weakness of the CCR unit, and any conditions that are disrupting or have the potential to disrupt the operation and safety of the unit. | Annual Inspection |
| | Inspect for any other change(s) which have affected the stability or operation of the CCR unit since the previous inspection | Annual Inspection |

| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |

* This number should match the Registration Unit No. given on Table V.A.
**FGD Pond A currently being retrofitted.

**Table V.J. – Inspection Schedule of Surface Impoundments**

| Facility Unit(s) and Basic Elements | Possible Error, Malfunction, or Deterioration | Frequency of Inspection |
|---|---|---|
| 011-FGD Pond A, 012-FGD Pond B, and 013-FGD Pond C | | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a).~~Weekly per 40 CFR 257.83(a)~~ |
| Above-grade piping | Deteriorating of piping/connections | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a).~~Weekly Inspection~~ |
| Truck Access Ramp | Spills, Deterioration | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a).~~Weekly Inspection~~, spills inspected and reported within 24-hrs |
| Containment Dike | Spills, excessive water levels, surface cracking, animal burrows, misalignments, slides, vegetative cover, rutting, erosion, seepage, slope protection/chutes | Weekly inspections are performed at intervals not exceeding seven days per 40 CFR 257.83(a).~~Weekly Inspection~~, spills inspected and reported within 24-hrs |
| Instrumentation | Monitor water level | Unit instrumentation (water level gauge) is inspected and monitored at intervals not exceeding 30 days per 40 CFR 257.83(a)(1)(iii). |
| Groundwater | Deterioration of pads, bollards, missing locks, compromise of casing integrity | Semi-Annual Inspection |
| 011-FGD Pond A, 012-FGD Pond B, and 013-FGD Pond C | | Annually per 40 CFR 257.83(b) |
| | Inspect for any changes in geometry of the structure since the previous annual inspection. | Annual Inspection |
| | Evaluate the approximate minimum, maximum, and present depth and elevation of the impounded water and CCR since previous annual inspection. | Annual Inspection |
| | Evaluate the storage capacity at the time of the inspection. | Annual Inspection |
| | Estimate the approximate volume of the impounded water and CCR contained in the unit at the time of the inspection. | Annual Inspection |
| | Inspect for any other change(s) which have affected the stability or operation of the CCR unit since the previous inspection | Annual Inspection |

# 1.0 INTRODUCTION

## 1.1 GENERAL

On behalf of Oak Grove Management Company LLC (OGMC), SCS Engineers (SCS) has prepared this report detailing the construction and construction quality assurance (CQA) activities associated with the retrofit of FGD-A Pond at the Oak Grove Steam Electric Station (OGSES) in Robertson County, Texas. The retrofit of the FGD-A Pond was performed in accordance with 40 C.F.R. § 257.102(k), with the new liner satisfying the requirements set forth in 40 C.F.R. § 257.72, which has been adopted by reference in 30 TAC §352.721. The initial written Retrofit Plan for FGD-A Pond was placed in the facility's operating record on March 31, 2020. The Retrofit Plan was later amended to extend the completion date. The amended Retrofit Plan was placed in the operating record on July 19, 2021. This report is accompanied by record (as-built) drawings, daily field reports, and test results, including pre-construction and construction testing, which document the construction and CQA oversight work performed to reline the FGD-A Pond. SCS was retained to complete the FGD-A Pond retrofit CQA oversight during construction and prepare this comprehensive report at the conclusion of the project.

The construction of the FGD-A Pond Retrofit generally followed the design and requirements contained in the following project related documents (see Appendix A – Pertinent Information):

- Oak Grove Steam Electric Station FGD-A Pond Retrofit construction drawings, prepared by Golder Associates Inc. and dated January 2021, revised November 2021.
- Oak Grove Steam Electric Station FGD-A Pond Retrofit Technical Specifications, prepared by Golder Associates Inc. and dated January 2021.
- Oak Grove Steam Electric Station Liner Quality Control Plan (LQCP), prepared by Golder Associates and dated January 2021, revised November 2021.
- 40 C.F.R. § 257.72 related to liner system requirements.

As evidenced by the project documentation and testing program results, the new FGD-A Pond liner was constructed in accordance with 40 C.F.R. § 257.72 and the FGD-A Pond Retrofit construction drawings, technical specifications, and LQCP. References to the LQCP and technical specifications will be referred to as "specifications."

## 1.2 PROJECT SUMMARY

The OGSES is owned and operated by OGMC and is located near Franklin, Texas. The FGD-A Pond, approximately 9.4 acres in size, is a Class 2 industrial waste surface impoundment receiving coal combustion residual (CCR) materials generated during the production of power at the OGSES. The FGD-A Pond is located on the north side of the OGSES and is adjacent to the FGD-B Pond as shown in Figure 1 below. The FGD-A Pond is registered under the site's TCEQ Solid Waste Registration 32043 as Waste Management Unit 011.

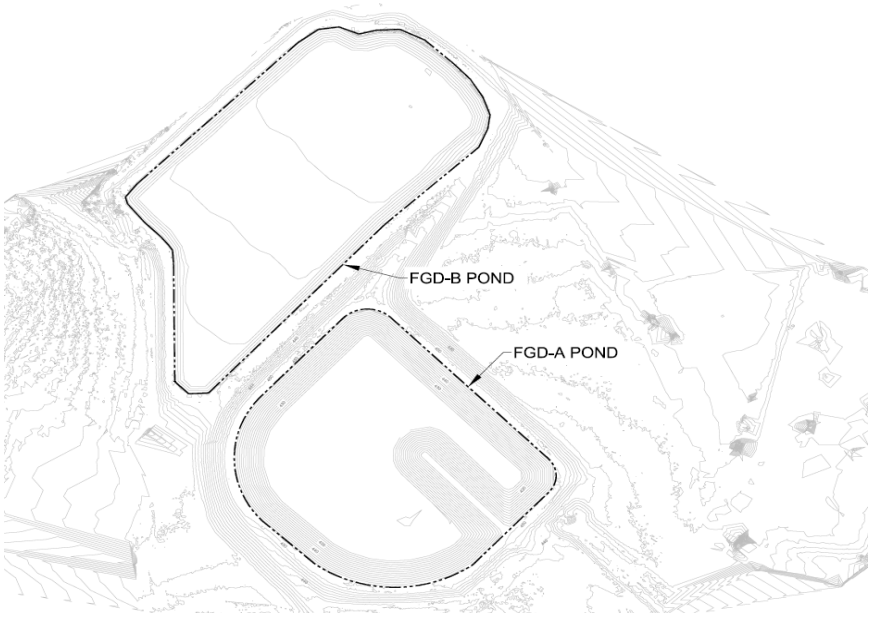

*Figure 1: FGD-A Pond Location*

This project generally consisted of removing water and CCR material from the FGD-A Pond, constructing a new liner system for the entire FGD-A pond (9.4 acres), placing a 1.5-foot thick layer of protective cover on the pond floor, and installing a concrete revetment around the crest of FGD-A Pond. The new liner system consisted of two different configurations depending on the condition of the existing 3-foot thick clay liner. In instances where the existing 3-foot clay liner was in acceptable condition, the top one-foot of the existing clay liner was excavated to the new geosynthetic liner subgrade. A 2-foot thick clay liner remained in place to establish the new geosynthetic liner subgrade. The 2-foot thick clay liner was overlain with a 60-mil textured high density polyethylene (HDPE) black geomembrane liner (2.6 Acres). In instances where the existing 3-foot clay liner was not in acceptable condition due to damage associated with over-excavation below the new geosynthetic liner subgrade, the non-acceptable areas were backfilled with clean soil structural fill and compacted to establish the new geosynthetic liner subgrade elevations and overlain with a geosynthetic clay liner (GCL) then a 60-mil textured HDPE black geomembrane liner (6.8 Acres). A more detailed list of construction activities is presented below:

- Contact water was pumped from the FGD-A Pond to the lined FGD-B Pond.
- CCR material was removed from the interior of the pond using an excavator and off-road articulated haul trucks.
- Off-road articulated haul trucks transported the CCR material to the on-site CCR Ash Landfill 1 for disposal.
- Clean soil from the stockpile (located southwest of FGD-A pond) was used as structural fill to backfill damaged areas that were over-excavated below the new geosynthetic liner subgrade during the cleanout of FGD-A Pond.
- Structural fill soil was placed in compacted lifts and tested for moisture/density, which only occurred in the areas of over-excavation to achieve the new geosynthetic liner subgrade elevations.
- Areas that had acceptable 2-foot thick clay liner were moisture and density tested and sampled using Shelby tubes to test for hydraulic conductivity.

- The total geosynthetic liner subgrade surface (9.4 acres) was field surveyed.
- The total geosynthetic liner subgrade surface was smooth rolled and nominally compacted with a smooth steel roller.
- GCL was installed on top of the smooth rolled geosynthetic liner subgrade of the areas that required structural fill placement to repair the unacceptable 2-foot thick clay liner. GCL was not installed on areas with an acceptable 2-foot thick clay liner.
- A 60-mil HDPE textured liner was installed on top of the entire pond area, all areas with either a GCL or acceptable 2-foot thick clay liner.

Golder Associates Inc. served as the design engineer for the FGD-A Pond retrofit project, while SCS served as the CQA engineers. SCS's CQA team was comprised of SCS staff which provided construction oversight and CQA services during construction. Construction progress was documented and photographed in daily field reports (DFRs) based on daily observations. The DFRs can be found in Appendix A.4 – Daily Field Reports.

## 1.3 KEY PERSONNEL

A list of key organizations that participated in relining the FGD-A Pond, along with their respective roles and key personnel is presented below:

| Steve Phongvilakoun | Site Superintendent |

# 2.0 CCR MATERIAL REMOVAL

Contact water and any precipitation accumulations in FGD-A Pond was pumped by the contractor to lined FGD-B Pond.

As the interior of FGD-A Pond dried, an excavator loaded CCR material into haul trucks for transportation and disposal in the on-site CCR Ash Landfill 1.

Once all of the CCR material had been removed to a visual standard, in accordance with the specifications, the CQA Project Director and Manager gave the final acceptance approval to continue liner construction.

The CCR removal from FGD A Pond was completed on November 7, 2021.

# 3.0 LINER INSTALLATION PREPARATION

## 3.1 CLAY LINER AND STRUCTURAL FILL PREPARATION

After the CCR material was removed, the interior of FGD-A Pond was surveyed by Ray W. Davis Consulting Engineers (Davis). It was determined that 6.8 acres of FGD-A Pond had been over-excavated below the targeted geosynthetic liner subgrade elevations. The areas over-excavated below the geosynthetic liner subgrade elevations did not meet the requirement of a minimum 2-foot clay liner. Clean soil was placed as structural fill in the over-excavated areas to raise the over-excavated areas to FGD-A Pond design geosynthetic liner subgrade elevations. Structural fill was placed in 6-inch lifts at 95% compaction and a moisture content in the range of -1 to +3 percent of the soil's optimum moisture content. All structural fill was moisture and density tested at a frequency of 1 test per 8,000 square feet per 6-inch lift consistent with the specifications, and all test results were acceptable.

A peninsula ramp was constructed on the southern side of the FGD-A Pond peninsula. The ramp was constructed from the same clean soil source that was used as structural fill to backfill areas of clay liner over-excavation. The peninsula ramp structural fill was constructed in 6-inch compacted lifts and was moisture and density tested to verify a compaction of 95% and a moisture content range of -1 to +3 percent of the soil's optimum moisture content at a frequency of 1 test per 8,000 square feet per 6-inch lift. Consistent with the specifications, and all test results were acceptable.

The areas with new structural fill and the peninsula ramp were overlain with GCL.

The remaining 2.6 acres (111,108 square feet) were tested and verified as acceptable 2-foot clay liner in accordance with the specifications. The lower 18-inches of the existing clay liner were tested for hydraulic conductivity at a frequency of 1 Shelby tube per 100,000 square feet. The top 6-inches of the clay liner were recompacted and moisture and density tested at a frequency of 1 test per 8,000 square feet and 1 Shelby tube per 40,000 square feet. A Troxler 3440 Plus nuclear moisture and density gauge was used to conduct all moisture and density testing. All moisture and density tests were conducted to verify a minimum of 95% compaction and a moisture content in the range of 0 to +6 percent of the soil's optimum moisture content. Fourteen moisture and density tests were performed and approved on the upper 6-inches of clay liner. Powdered bentonite was used to backfill all gauge and Shelby tube perforations. The clay liner construction testing requirements are noted in Table 1 below:

| Test Parameter | Testing Procedure | Frequency |
|---|---|---|
| In-place Moisture/Density | ASTM D6938, D2937, or D1556 | 1 per 8,000 $ft^2$/upper 6 inches |
| Percent Finer Than No. 200 Sieve | ASTM D1140 or D422 | 1 per 40,000 $ft^2$/upper 6 inches<br>1 per 100,000 $ft^2$/lower 1.5 feet |
| Atterberg Limits | ASTM D4318 | |
| Hydraulic Conductivity | ASTM D5084<br>Max. $1x10^{-7}$ cm/sec | |

Table 1: Clay Liner Construction Testing Requirements*

*Clay Liner Construction Testing Requirements provided by Oak Grove Steam Electric Station Liner Quality Control Plan, revised by Golder Associates Inc. on November 2021.

Two Shelby tubes (ST-1 and ST-2) were collected from the bottom 18-inches of clay liner. Fourteen moisture and density tests were taken and three Shelby tubes (ST-3, ST-4, and ST-5) were collected for the top 6-inches of clay liner. Clay liner moisture and density tests and lab results were reviewed and found to be in conformance with the specifications. Clay liner moisture and density tests, sampling locations, and lab results are located in Appendix D.1 - Soils.

Once subgrade elevations were achieved, the surveyor verified the elevations were within the tolerance allowed (+0.1 feet) at the certification points identified in the construction plans. Areas between certification points were visually verified by the CQA Monitor to verify grades were continuous with no visual deviations. Any areas not within the tolerance were regraded to an acceptable elevation. A Subgrade As-Built, certified by a registered surveyor in the State of Texas, is contained in Appendix F - Record Drawings.

## 3.2 GEOSYNTHETIC LINER SUBGRADE PREPARATION

The final geosynthetic liner subgrade surface represented the top of the structural fill and the top of the 2-foot thick clay liner. This surface served as the subgrade that the GCL and/or HDPE geomembrane liner were installed on. The geosynthetic liner subgrade was smooth rolled and nominally compacted with a smooth steel roller. The geosynthetic liner subgrade surface was continuously inspected and approved by the CQA Monitor and the geosynthetic liner installer immediately prior to GCL and HDPE geomembrane liner installation.

## 3.3 ANCHOR TRENCH

An anchor trench was constructed at the crest of sideslope around the outside perimeter of the FGD-A Pond by MSI. The anchor trench was offset 2-feet from the crest of the FGD-A Pond sideslope. The anchor trench was used to secure the GCL, HDPE geomembrane liner, and the concrete revetment. The anchor trench was constructed just prior to, and concurrent with the GCL and HDPE geomembrane liner installation by Lone Star Lining (LSL).

To avoid having open trenches and avoid the trenches being filled with stormwater during rain events, the anchor trenches were excavated as the project progressed. Generally, the anchor trench was dug the day before, or day of, the GCL and HDPE geomembrane liner installation. Prior to the concrete revetment installation, LSL placed sandbags into the anchor trench to prevent any GCL and HDPE geomembrane liner from lifting due to high winds. Backfilling of the anchor trenches did not occur until the concrete revetment was installed in the anchor trench.

# 4.0 GEOSYNTHETIC LINER INSTALLATION

## 4.1 GCL CHARACTERISTICS

The Resistex U40 CN9 Geosynthetic Clay Liner, manufactured by CETCO, was used to reline the FGD-A Pond in areas that required structural fill placement to repair the unacceptable 2-foot thick clay liner. This material is a needle punched reinforced composite GCL comprised of a uniform layer of polymer enhanced granular sodium bentonite encapsulated between a woven and a nonwoven geotextile. The woven side of the GCL was installed in contact with the geosynthetic liner subgrade and the non-woven side was installed to be in contact with the overlying HDPE geomembrane liner.

CETCO provided manufacturer quality control (MQC) tests for the geotextile and bentonite, and SCS verified conformance with the specifications. Per the specifications, CETCO was requested to submit the twenty previous hydraulic conductivity test results. However, due to the new nature of the manufactured GCL, only nine hydraulic conductivity test results were available. The MQC test reports for the GCL are included in Appendix C.2 - Geosynthetic Manufacturer's Quality Assurance and Quality Control (QA/QC). The test results indicated the GCL rolls were manufactured in conformance with the specifications.

TRI Environmental, Inc. (TRI) collected samples of the GCL at the manufacturer's plant and conducted third-party conformance testing of the GCL in accordance with the specifications. TRI tested for bentonite mass per unit area and hydraulic conductivity. The results of the conformance testing are included in Appendix C.3 – Geosynthetic Conformance. The test results indicated the GCL was in conformance with the specifications.

Each GCL roll measured approximately 150-feet by 14.5-feet. Each seam had a minimum 6-inch overlap and granular bentonite was placed in the overlaps. LSL installed approximately 294,262 square feet of GCL using 161 rolls. A total of 354,525 square feet, 163 rolls, was ordered to fulfill the installation quantity. The square footage ordered accounted for sideslopes, overlap, and waste.

The following tests are based on 354,525 square feet of GCL installed at the FGD-A Pond. SCS reviewed the Manufacturer's Quality Control Test and Conformance Test results and verified the GCL was in conformance with specifications.

| Test | Type of Test | Frequency of Testing | Minimum Required | Actual Quantity | Passing Quantity |
|---|---|---|---|---|---|
| Manufacturer's Quality Control | Bentonite | | | | |
| | Fluid Loss | 1 per 50 tons or every truck | 5 | 5 | 5 |
| | Free Swell | | 5 | 5 | 5 |
| | Geotextile | | | | |
| | Mass per Unit Area | Per 200,000 ft$^2$ | 2 | 40 | 40 |
| | Tensile Properties | | 2 | 40 | 40 |
| | GCL Product | | | | |
| | Bentonite Mass | Per 40,000 ft$^2$ | 9 | 11 | 11 |
| | GCL Moisture Content | | 9 | 11 | 11 |
| | Peel Strength | | 9 | 11 | 11 |
| | Grab Tensile Strength | Per 200,000 | 2 | 11 | 11 |
| | Hydraulic Conductivity | 1 per week for each production line | 3 | 3 | 3 |
| Conformance Testing | Bentonite Mass/Unit | Per 100,000 ft$^2$ | 4 | 4 | 4 |
| | Hydraulic Conductivity | | 4 | 4 | 4 |

*Table 2: GCL Manufacturer's Quality Control and Conformance Test Summary*

The GCL rolls were manufactured on May 14, October 25, and December 6, 2021. These rolls were delivered to the site on June 22 and 23, November 24, December 28 and 30, 2021 and January 3 and 6, 2022. Each roll was assigned a unique number identifier by the manufacturer and wrapped in plastic for shipping. Upon arrival at the site, SCS's CQA Monitor inspected the rolls for damage and verified the roll identifications met the shipping manifest. A Genie forklift with a spreader bar attachment was used to offload the GCL rolls from the delivery trucks. The Genie forklift then stockpiled the rolls adjacent to the FGD-A Pond on a prepared soil pad that had compacted soil 6-inches above natural ground. The rolls remained sealed in their protective wrap and covered with an additional plastic tarp to prevent damage until ready for deployment consistent with specifications.

## 4.2 HDPE GEOMEMBRANE LINER CHARACTERISTICS

The 60-mil HDPE textured black geomembrane liner manufactured by Solmax was used to reline the FGD-A Pond. This liner is a co-extruded textured HDPE geomembrane liner.

Solmax provided MQC tests for the HDPE geomembrane liner to verify conformance with the specifications. The MQC test reports for the HDPE geomembrane liner are included in Appendix C.2 - Geosynthetic Manufacturers QA/QC, and SCS verified conformance with the specifications.

The following tests are based on 468,000 ft$^2$ of 60-mil textured HDPE geomembrane liner and 22,711 feet of seam installed at the FGD-A Pond. SCS reviewed the MQC test and conformance test results and verified the HDPE geomembrane liner was in conformance with specifications.

| Test | Type of Test | Frequency of Testing | Minimum Required | Actual Quantity | Passing Quantity |
|---|---|---|---|---|---|
| Manufacturer's Quality Control | Thickness | Each roll | 40 | 40 | 40 |
| | Density | Every 10 rolls | 4 | 4 | 4 |
| | Carbon Black Content | Every 2 rolls | 20 | 20 | 20 |
| | Carbon Black Dispersion | Every 10 rolls | 4 | 4 | 4 |
| | Tensile Strength | Every 2 rolls | 20 | 20 | 20 |
| | Tear Resistance | Every 5 rolls | 8 | 8 | 8 |
| | Puncture Resistance | Every 5 rolls | 8 | 8 | 8 |
| | Asperity Height | Every roll | 40 | 40 | 40 |
| Conformance Testing | Thickness | Per 100,000 $ft^2$ and every resin lot | 13 | 13 | 13 |
| | Density | | 13 | 13 | 13 |
| | Carbon Black Content | | 13 | 13 | 13 |
| | Carbon Black Dispersion | | 13 | 13 | 13 |
| | Tensile Properties | | 13 | 13 | 13 |
| Destructive Lab Tests | Seam Shear Strength | Per 500 linear feet of seam | 46 | 51 | 51 |
| | Seam Peel Strength | | 46 | 51 | 51 |

*Table 3: Geomembrane Manufacturer's Quality Control and Conformance Test Summary*

The HDPE geomembrane liner rolls were manufactured on June 18, April 17, September 8 and 9, and October 22 and 27, 2020; and April 2, 11, and May 2 through 4, 2021. These rolls were delivered to the site on June 22 and 23, 2021. Each roll was assigned a unique number identifier by the manufacturer. Upon arrival at the site, SCS's CQA Team inspected the rolls for damage and verified the roll identifications met the shipping manifest. A Genie forklift with a spreader bar attachment was used to offload the HDPE geomembrane liner rolls from the delivery trucks. The Genie forklift then stockpiled the rolls adjacent to the FGD-A Pond on a prepared soil pad that had compacted soil 6-inches above natural ground consistent with specifications.

## 4.3 CONSTRUCTION QUALITY CONTROL AND CONSTRUCTION QUALITY ASSURANCE

Construction Quality Control (CQC) was provided by Lone Star Lining, Inc., personnel on a full-time basis during the liner installation.

CQA monitoring of the installation and construction of the GCL and HDPE geomembrane liner systems was performed on a full-time basis by two qualified CQA Monitors under the direct supervision of the CQA Project Manager. CQA Monitors observed and documented deployment of the GCL and HDPE geomembrane liner, proper overlap configuration, proper orientation of panels, all seaming operations and non-destructive and destructive seam testing of the HDPE geomembrane liner, measured seam lengths, recorded panel dimensions, located all patches and repairs, and monitored ambient temperature readings 6 inches above the HDPE geomembrane liner. Inspection reports. Test results from the CQA effort on the HDPE geomembrane liner are located in Appendix D.2 – Geosynthetics.

## 4.4 GEOSYNTHETIC LINER INSTALLATION

The geosynthetic liner included a textured 60-mil HDPE geomembrane black liner installed in areas that required structural fill placement to repair the unacceptable 2-foot thick clay liner and over the

new GCL. The installation of the HDPE geomembrane liner and GCL occurred concurrently, during times that both materials were being installed. This allowed for the GCL to be placed on the geosynthetic liner subgrade and be covered and protected with the geomembrane within 3 hours of its placement.

The overall geosynthetic liner deployment began along the interior embankment sideslope at the southern end of the FGD-A Pond and then proceeded in a clockwise manner to the western corner and along the northwest embankment to the northern corner. For this deployment, the geosynthetic liner extended from the anchor trench to a minimum of 5 feet onto the pond floor. The deployment then transitioned along the northern corner working counterclockwise to the southeast along the northeast embankment. The liner along the northeast embankment started at the anchor trench and extended across the length of the floor until it met the liner placed along the northern and western embankment. The deployment continued on the west end of the peninsula, deploying from north to south, on the west peninsula embankment sideslope and pond floor. This deployment continued until it met geosynthetic liner on the southern embankment and the southern corner, west of the peninsula. The geosynthetic liner deployment then transitioned to the north tip of the peninsula, extending on the floor until it met prior geosynthetic liner deployed on the floor. Deployment then transitioned back to the northeastern embankment to the southeastern corner, and then proceeded in a clockwise manner to the southern corner, west of the peninsula. For this deployment, the geosynthetic liner extended from the anchor trench to approximately 5 feet onto the pond floor. The final deployment area took place from the north tip of the peninsula to the southern corner, west of the peninsula. Deployment occurred from north to south on the east peninsula embankment side slope, until it met geosynthetic liner deployed on the northeastern embankment.

### 4.4.1 Geosynthetic Clay Liner Installation

A Genie forklift with the spreader bar attachment was also used to deploy the GCL on the FGD-A Pond sideslopes and floor. For these operations, the Genie forklift would be positioned at the top of the pond adjacent to the anchor trench. A utility terrain vehicle (UTV) used clamps to secure the GCL at the top of the pond. The UTV would then drive down the interior sideslope of the pond and cover the sideslope and floor. Once the GCL had been placed, it was manually adjusted to the proper overlap utilizing the alignment markings placed on the edge by the manufacturer. The granular bentonite was placed on the seams to seal the edges and heat was applied to the longitudinal seams to bond (leister) the ends using a heat gun or butane torch. Loose panel ends were anchored by sandbags and all wrinkles and fish mouths were worked out or reduced. Each panel was assigned a unique number.

GCL panels were deployed such that GCL was exposed for a maximum of 3 hours before being covered by the HDPE geomembrane liner. No GCL was damaged, subject to rain or being wet, or otherwise compromised throughout the duration of GCL and HDPE geomembrane liner installation. Installed GCL was covered by HDPE geomembrane liner at the end of each workday.

### 4.4.2 60-Mil HDPE Geomembrane Liner Installation

The Genie forklift, with the spreader bar attachment, was used to deploy each HDPE geomembrane liner roll. For these operations, the Genie forklift would be positioned at the top of the pond adjacent to the anchor trench. A UTV would use clamps to secure the HDPE geomembrane liner at the top of the pond. The UTV would then drive down the interior sideslope of the pond and cover the placed GCL. Once the HDPE geomembrane liner was placed over the GCL, it would be manually adjusted to a minimum overlap of 4 inches. Loose panel ends were anchored by sandbags and all wrinkles and fish

mouths were worked out or reduced. Each panel was assigned a unique number. The seam area was cleaned using rags and brushes to remove all grease, moisture, dirt, and debris prior to seaming.

#### 4.4.2.1 Geomembrane Seaming

Before the start of the day's seaming operations, each operator performed trial seams on their seaming equipment. These tests were also performed after the noon break and at other times deemed necessary by the CQA Monitor, in accordance with the specifications. Each operator welded a minimum of 3-feet of HDPE geomembrane liner together for their trial seams and cut 4 sample bones from this section for testing. Two of the bones were tested in the peel mode and two were tested in shear mode using a field tensiometer provided by LSL. The minimum passing criteria is shown in Table 3: Minimum Required Seam Strength.

| Failure Mode | Test Method | Value (psi) |
|---|---|---|
| Shear | ASTM D6392 | 120 |
| Peel (Fusion) | ASTM D6392 | 91 |
| Peel (Extrusion) | ASTM D6392 | 78 |

*Table 4: Minimum Required Seam Strength*

Only equipment that passed the trial seam test was permitted to be used to seam the HDPE geomembrane liner. CQA test results documenting the trial seam, the welder, the welding apparatus number, time, date, ambient temperature, welding machine temperature, and speed are located in Appendix D.2 – Geosynthetics – Trial Weld.

The HDPE geomembrane liner seaming process occurred concurrently with the panel deployment. LSL primarily used hot wedge double track fusion welders to seam the overlap where two sections of HDPE geomembrane liner met. Extrusion welders were primarily used to seam patches at panel intersections (tees and cross joints) and HDPE pipe penetrations (FGD-A Pond to pump station pipe, drain line, and FGD-A/B Pond crossover pipe). The patches were installed using the same material as the HDPE geomembrane liner. The seaming operations were observed and documented by the CQA Monitors and verified that these results met specifications. Seaming logs are summarized in Appendix D.2 – Geosynthetics – Panel Seaming/Repairs.

#### 4.4.2.2 Geomembrane Repair

A repair patch was installed at each tee joint, cross joint, and defect observed during the HDPE geomembrane liner installation. A unique repair identification number was assigned by the CQA Monitors to each of these repairs in accordance with the specifications.

In accordance with the specifications, small creases and holes were repaired by applying a bead of extrudate over the defect. Defects larger than ¼-inch in size were patched. The patches were oval in shape and extended a minimum of 6 inches beyond the intersection or defect. Defective seams, or seams that could not be nondestructively tested, were capped with a patch. Surfaces of the geomembrane receiving repair work were abraded and cleaned prior to the installation of the repair.

#### 4.4.2.3 Non-Destructive Seam Continuity Testing

All double track fusion welded seams received an air pressure test. For this test, the air channel between the tracks of the two fusion welds were sealed off and an inflation needle and pressure gauge were inserted into the air channel. An air compressor then pressurized the channel to a minimum air

pressure of 30 psi for a minimum of 5 minutes. A passing test was achieved if the seam held the pressure or lost no more than 3 psi during the time period. Following a passed pressure test, the seal on the opposite end of the seam was removed to allow release of the air. The pressure gauge had to return to zero to verify that there was no blockage(s) within the seam.

All patches, repairs or extrusion welds were vacuum tested utilizing a vacuum box. For this test, a soapy water solution was applied to the seam. A clear rigid wall box with a plastic plexiglass top and neoprene gasket around the bottom was placed over the seam and a vacuum of at least 3 psi was applied to the box creating a seal between the box and the HDPE geomembrane liner. A passing test occurred if no soap bubbles were observed during a ten second interval. A failing test occurred with the appearance of soap bubbles which were indicative of pinholes, porosity, or non-bonded areas in the repair.

If a seam failed non-destructive testing, then retesting would be performed to isolate the leak. The seam would then be repaired a minimum of 6 inches on either side of the leak and retested until all of the seam length passed. If the CQA monitor felt the seam was questionable during any phase of the HDPE geomembrane liner installation, then the seam would be destructively tested (refer to the Destructive Sample Test Results for details). The results of non-destructive tests performed indicated the seams were in conformance with the specifications. Geomembrane Non-Destructive Logs are located in Appendix D.2 – Geosynthetics – Non-Destruct.

#### 4.4.2.4 Destructive Testing

The CQA personnel selected destructive test locations based on observations made during seaming or selected at random. A destructive sample (DS) was obtained at a minimum of 1 sample per 500 linear feet of seam. There was 22,711 linear feet of liner fusion seam installed at the FGD-A Pond. Based on a minimum requirement of 1 test per 500 linear feet of seam, 46 destructive tests were required and 51 destructive tests were performed.

The average seam length tested was 445 linear feet.

An additional 8 destructive tests (DX 1-8) were taken for the extrusion welding that took place to complete repairs.

Each destructive sample measured 48 inches in length and 6 inches in width. This sample was divided into three sections approximately 16 inches in length. One section was tested in the field. The second was sent to TRI Environmental, Inc. for independent laboratory testing. The third section was kept for archival records.

Ten samples (bones) were taken from each section for testing. Five bones were tested for sheer strength and five bones were tested for peel strength according to specifications. Each destructive test sample was considered to have passed when 4 out of 5 bones met both the strength requirements and exhibited film tear bond (FTB). SCS confirmed that the results of all 59 destructive tests performed indicated all 59 of the tests passed the requirements detailed in the specifications. A summary of destructive sample results can be found in Appendix D.2 – Geosynthetics – Destruct.

# 5.0 CONCRETE REVETMENT

Following the completion of GCL and HDPE geomembrane liner installation, a concrete erosion control lining (revetment) was installed on top of the 60-mil textured HDPE geomembrane liner along the upper sideslopes of FGD-A Pond. The concrete revetment was installed throughout the pond from the anchor trench at the top of the sideslope downward to elevation 434.0 feet mean sea level (msl). Along the sideslope areas that did not have the peninsula ramp above elevation 434.0 feet msl., the installed concrete revetment was approximately 55 feet long from the top crest of the sideslope to elevation 434.0 feet msl. Along the sideslope areas that did have the peninsula ramp above elevation 434.0 feet msl, the concrete revetment was approximately 70 feet long from the top crest of the sideslope across the 12 foot wide peninsula access road to elevation 434.0 feet msl.

The concrete revetment consisted of a HYDROTEX Uniform Section fabric form that is then filled with a pumpable fine aggregate concrete. The HYDROTEX fabric forms were manufactured by Synthetex, LLC. located in Peachtree Corners, Georgia. A 7,100 psi fine aggregate concrete was pumped into the fabric forms providing an erosion resistant concrete lining. Additional information on the fabric form and the aggregate concrete have been included in Appendix C.4 – Preconstruction – Concrete Revetment Product Data.

MR Geo began deploying fabric forms on January 14, 2022. Fine aggregate concrete was pumped into the fabric forms. MR Geo concluded revetment installation on March 12, 2022.

# 6.0 AS BUILT SURVEY

Davis was the record surveyor for this project. They performed survey operations throughout the project and their time on site is documented in the DFRs in Appendix A.4 – Daily Field Reports. Davis provided as-built survey drawings to SCS and the data from these surveys was used to create the final figures and as-built drawings. The Subgrade As-Built and Geomembrane Panel Layout As-Built are located in Appendix F – Record Drawings. Davis completed onsite surveying for the FGD-A Pond retrofit project on March 7, 2022.

# 7.0 PROFESSIONAL ENGINEER'S CERTIFICATION

"As evidenced by the project documentation and testing program results, the new FGD-A Pond liner was constructed in accordance with 40 C.F.R. § 257.72 and the January 6, 2021 "FGD-A Pond Retrofit," project drawings, and specifications.

I certify to the best of my professional judgement that the FGD-A Pond Retrofit at the Oak Grove Steam Electric Station was constructed in substantial accordance with the facility's registration, specifications, and construction drawings. This certification is contingent on the fact that all information supplied to the signatory authority, at the time of this certification is unquestionably accurate and was provided in good faith."

07/14/2022

James Roy Murray III, P.E., Texas Professional Engineer No. 73860 Certification Date

"As evidenced by the project documentation and testing program results, the new FGD-A Pond liner was constructed in accordance with 40 C.F.R. § 257.72 and the January 6, 2021 "FGD-A Pond Retrofit," project drawings, and specifications.

I certify to the best of my professional judgement that the FGD-A Pond Retrofit at the Oak Grove Steam Electric Station was constructed in substantial accordance with the facility's registration, specifications, and construction drawings. This certification is contingent on the fact that all information supplied to the signatory authority, at the time of this certification is unquestionably accurate and was provided in good faith."

## GENERAL NOTES

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK. LUMINANT PROCEDURES SHALL BE USED FOR ALL EXCAVATIONS, HOT WORK, AND LOCK-OUT/TAG-OUT.
2. FOR THIS WORK, LUMINANT IS THE OWNER AND GOLDER ASSOCIATES INC. IS THE ENGINEER. THE COMPANY BIDDING THE WORK IS THE CONTRACTOR.
3. CONTRACTOR IS RESPONSIBLE FOR LOCATING AND PROTECTING ALL EXISTING UNDERGROUND, ABOVE-GRADE, AND OVERHEAD UTILITIES. ALL EXISTING UNDERGROUND UTILITIES SHOULD BE FIELD VERIFIED AND LOCATED BY POTHOLING PER LUMINANT REQUIREMENTS.
4. WORKERS SHALL BE AWARE OF ACTIVE EQUIPMENT IN THE VICINITY OF THE WORK AREA AND SHALL TAKE PRECAUTIONS NOT TO DISTURB OPERATING EQUIPMENT.
5. CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, AND SITE CONDITIONS PRIOR TO STARTING WORK, AND SHALL NOTIFY THE OWNER'S REPRESENTATIVE IF CONFLICTS EXIST ON THE DRAWINGS.
6. LOCATIONS AND DIMENSIONS OF EXISTING UTILITIES AND STRUCTURES ARE BASED ON DRAWINGS AND PARTIAL GROUND SURVEY PROVIDED BY LUMINANT AND SHOULD BE FIELD-VERIFIED.
7. CONTRACTOR SHALL PERFORM HOUSEKEEPING DUTIES ON A DAILY BASIS TO KEEP WORK AREAS CLEAN. HOUSEKEEPING SHALL BE PERFORMED AT THE COMPLETION OF THE WORK TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL STAGE EQUIPMENT AND MATERIALS ONLY IN AREAS APPROVED BY THE OWNER.
9. CONTRACTOR IS RESPONSIBLE FOR SURVEY CONTROL.
10. SPECIAL TOOLS AND OTHER REQUIRED INSTALLATION EQUIPMENT SUCH AS SLINGS, LEVER TOOLS, RATCHET JACKS, PULLING CABLES, ETC., FOR MAKEUP OF JOINTS SHALL BE FURNISHED BY THE CONTRACTOR.
11. TEST PLUGS, HYDROTEST PUMPS, GAUGES, RELIEF VALVES, AND ALL TESTING EQUIPMENT SHALL BE FURNISHED BY THE CONTRACTOR.
12. PIPING CROSSING UNDER ROADWAYS IS DESIGNED FOR AASHTO HS-20 LOADINGS. ALL PIPES SHALL HAVE A MINIMUM COVER DEPTH OF 2'-0" AS MEASURED FROM THE TOP OF THE PIPE UNLESS OTHERWISE INDICATED ON THE DRAWINGS.
13. WHERE VERTICAL OR HORIZONTAL ALIGNMENT REQUIRES DEFLECTION FROM STRAIGHT LINE OR GRADE, SUCH DEFLECTION SHALL NOT EXCEED MAXIMUM DEFLECTION RECOMMEND BY THE PIPE MANUFACTURER. IF ALIGNMENT REQUIRES DEFLECTION EXCEEDING RECOMMENDED LIMITS, FURNISH SPECIAL BENDS TO PROVIDE ANGULAR DEFLECTIONS WITHIN THE ALLOWABLE LIMITS.
14. PIPE SHALL BE CUT NEATLY AND WITHOUT DAMAGE TO THE PIPE. UNLESS OTHERWISE RECOMMENDED BY THE PIPE MANUFACTURER, CUT PIPE WITH MECHANICAL CUTTER ONLY. CUT PLASTIC PIPE SQUARE, USING HAND SAW, AND REMOVE ALL BURRS.
15. APPROPRIATE PROVISIONS SHALL BE MADE TO PREVENT PIPE FLOTATION AND PREVENT FOREIGN MATERIAL FROM ENTERING PIPE OPENINGS. TEMPORARY BLINDS SHALL BE PLACED ON ALL PIPE ENDS AND STUB-UPS DURING INSTALLATION. BLINDS ARE NOT TO BE REMOVED UNTIL PERMANENT CONNECTIONS ARE MADE.
16. VALVE BODIES USED ON THE PROPOSED DRAIN LINES FROM FGD-A POND AND FGD-B POND SHALL BE SET ON A CONCRETE SUPPORT FOOTING AS APPROVED BY THE OWNER'S REPRESENTATIVE.
17. NEW WAFER KNIFE GATE VALVE WITHIN THE PUMP STRUCTURE WILL BE SUPPORTED BY EXISTING ADJACENT PIPING SUPPORTS.
18. IF DISTURBED DURING CONSTRUCTION, THE EXISTING GATE VALVE ON THE FGD-A TO FGD-B CROSSOVER PIPELINE SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL APPROVED BY THE OWNER'S REPRESENTATIVE AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE VALVE BODY. THE MATERIAL DIRECTLY ABOVE THE PIPE IN THE EMBEDMENT ZONE SHALL BE ONLY LIGHTLY COMPACTED TO AVOID DISTORTING THE PIPE.
19. CONFIGURATIONS AND DIMENSIONS SHOWN ARE BASED ON TYPICAL DIMENSIONS FOR FITTINGS AND VALVES. ACTUAL DIMENSIONS MAY VARY BY MANUFACTURER AND WILL REQUIRE FIELD ADJUSTMENTS.

## UNDERGROUND PIPE INSTALLATION

1. CONTRACTOR SHALL SUBMIT A TRENCHING SAFETY PLAN FOR REVIEW AND APPROVAL BY THE OWNER BEFORE ANY TRENCHING ACTIVITIES CAN BEGIN. THE PLAN SHALL INDICATE THE SYSTEMS, METHODS, AND TECHNIQUES TO BE USED TO ENSURE THAT ALL TRENCH SIDEWALLS WILL BE STABLE AND/OR GUARDED FOR THE PROTECTION OF PERSONNEL AND FACILITIES IN THE VICINITY OF THE WORK.
2. AS REQUIRED, CONTRACTOR SHALL PREPARE AND IMPLEMENT AN OWNER APPROVED PLAN TO CONTROL GROUNDWATER IN ALL DEVELOPED EXCAVATIONS (INCLUDING GROUNDWATER AND SURFACE WATER).
3. UNDERGROUND PIPE SHALL BE LOWERED INTO TRENCH BY MEANS OF DERRICK, ROPES, BELT SLINGS, OR OTHER EQUIPMENT RECOMMENDED BY THE PIPE SUPPLIER. TAKE SPECIAL CARE IN HANDLING PREFABRICATED SECTIONS OF HDPE PIPE - THE FUSED FITTINGS MAY NOT BE CAPABLE OF CARRYING THE WEIGHT OF ADJACENT PIPING. DO NOT DUMP OR DROP ANY MATERIALS INTO THE TRENCH.
4. FOR UNDERGROUND AND ON-GRADE HDPE PIPE, REST THE FULL LENGTH OF EACH SECTION OF THE PIPE SOLIDLY ON THE PIPE BED. DO NOT LAY PIPE IN WATER, OR WHEN FOUNDATION CONDITIONS ARE UNSUITABLE FOR THE WORK.
5. UNDERGROUND PIPING SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL APPROVED BY THE OWNER'S REPRESENTATIVE AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE MATERIAL DIRECTLY ABOVE THE PIPE IN THE EMBEDMENT ZONE SHALL BE ONLY LIGHTLY COMPACTED TO AVOID DISTORTING THE PIPE.
6. EMBANKMENT FILL (MORE THAN 12 INCHES ABOVE THE PIPE) SHALL CONSIST OF SOILS EXCAVATED AS PART OF THE WORK AS APPROVED BY THE OWNER'S REPRESENTATIVE. IF EXCAVATED SOILS ARE DEEMED UNSUITABLE, EMBANKMENT FILL SHALL CONSIST OF IMPORTED EARTHEN MATERIALS APPROVED BY THE OWNER'S REPRESENTATIVE. EMBANKMENT FILL SHALL BE PLACED IN HORIZONTAL LOOSE LIFTS NOT EXCEEDING TEN (10) INCHES IN THICKNESS AND MOISTURE CONDITIONED TO 1 PERCENT BELOW TO 3 PERCENT ABOVE STANDARD PROCTOR (ASTM D698) OPTIMUM MOISTURE CONTENT. EMBANKMENT FILL SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY.
7. FOR ALL UNDERGROUND PIPING, MARKING TAPE ENABLING DETECTION BY METAL DETECTOR (AS INDICATED IN THE SPECIFICATIONS) SHALL BE LOCATED ABOVE THE PIPE AT A DEPTH OF 1 TO 2 FEET BELOW THE FINISHED GRADE.

## HDPE PIPE INSTALLATION

1. FUSION MACHINE FOR BUTT FUSION OF HDPE PIPING SHALL BE FURNISHED BY THE CONTRACTOR.
2. ABOVE GRADE HDPE TO BE INSTALLED WITH AN EARTHEN BERM ANCHORAGE APPROXIMATELY EVERY 400 FEET WITH THE HDPE SNAKED BETWEEN ANCHORAGE POINTS APPROXIMATELY 20 FEET OFF A STRAIGHT LINE ALIGNMENT WITH 20 FEET HORIZONTAL CLEARANCE TO ALLOW THE HDPE PIPES TO EXPAND OR CONTRACT.
3. SECTIONS OF POLYETHYLENE PIPE SHOULD BE JOINED INTO CONTINUOUS LENGTHS ON THE JOBSITE ABOVE GROUND. THE JOINING METHOD SHALL BE THE BUTT FUSION METHOD AND SHALL BE PERFORMED IN STRICT ACCORDANCE WITH THE PIPE MANUFACTURER'S RECOMMENDATIONS BY CRAFT WORKERS CERTIFIED FOR THE FUSION MACHINE AND PIPING MATERIALS BEING UTILIZED. THE BUTT FUSION JOINING WILL PRODUCE A JOINT WITH WELD STRENGTH EQUAL TO OR GREATER THAN THE TENSILE STRENGTH OF THE PIPE ITSELF. ALL FIELD WELDS SHALL BE MADE WITH FUSION EQUIPMENT EQUIPPED WITH A DATA LOGGER. TEMPERATURE, FUSION PRESSURE AND A GRAPHIC REPRESENTATION OF THE FUSION CYCLE SHALL BE PART OF THE QUALITY CONTROL RECORDS.
4. MECHANICAL JOINING OF HDPE PIPE TO OTHER MATERIALS SHALL BE ACCOMPLISHED USING AN HDPE FLANGE ADAPTER WITH A DUCTILE IRON BACK-UP RING.
5. SOCKET FUSION, HOT GAS FUSION, THREADING, SOLVENTS, AND EPOXIES WILL NOT BE USED TO JOIN HDPE PIPE.
6. PRESSURE PIPING SYSTEMS CONSTRUCTED FROM HDPE MATERIAL SHALL BE LEAKAGE TESTED USING THE METHODOLOGY OUTLINED IN ASTM F2164, AND PER THE MANUFACTURER'S RECOMMENDATIONS AND THE PROJECT SPECIFICATIONS.

## STEEL PIPE INSTALLATION

1. COATING/PAINTING SHALL BE APPLIED AND TOUCHED UP AS DIRECTED BY THE OWNER.
2. ALL NEW PIPING WITHIN THE EXISTING PUMP STRUCTURE NEAR FGD-A POND SHALL BE SUPPORTED WITH MEMBERS CONSISTENT WITH THE EXISTING PIPE SUPPORTS IN THE STRUCTURE.
3. ALL WELDING SHALL BE COMPLETED BY QUALIFIED WELDERS.
4. ALL VALVES AND STEEL PIPING SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS

## SPECIFICATIONS

1. ALL MATERIALS AND INSTALLATION TO BE IN ACCORDANCE WITH THE SPECIFICATIONS OR OWNER APPROVED ALTERNATIVE SPECIFICATIONS.
2. CLAY LINER, GEOSYNTHETIC CLAY LINER (GCL), GEOMEMBRANE LINER, AND PROTECTIVE COVER SHALL BE PLACED IN ACCORDANCE WITH THE LINER QUALITY CONTROL PLAN.

## MATERIALS

1. CONTRACTOR IS RESPONSIBLE FOR PROCURING ADDITIONAL NEEDED QUANTITIES TO MAKE UP FOR SHORTAGES DUE TO LOSS, FIELD REVISIONS, WASTE, ETC.
2. CONTRACTOR TO FURNISH PLASTIC MARKING TAPE FOR NON-METALLIC UNDERGROUND PIPING IN ACCORDANCE WITH THE SPECIFICATION REQUIREMENTS.
3. ALL NEW SOLID WALL HDPE PIPING AND FITTINGS SHALL BE COMPOSED OF PE4710 RESIN CONSTRUCTED TO ASTM F714, OR ALTERNATE AS APPROVED BY THE OWNER'S REPRESENTATIVE.
4. ALL HDPE PIPING, FITTINGS, AND FLANGES SHALL HAVE IRON PIPE SIZING (IPS).
5. ALL NEW PERFORATED HDPE PIPING SHALL BE ADS N-12 PIPE.
6. ALL NEW STEEL PIPING AND FITTINGS SHALL BE ERW A53 STD SCHEDULE CARBON STEEL CONFORMING TO ASME 31.1 POWER PIPING.
7. ALL FLANGES SHALL CONFORM TO ASME B16.5 CLASS 150.
8. ALL PIPE, FITTINGS, FLANGES, AND VALVES FOR FGD-A TO PUMPS SUCTION LINE, FGD-B TO PUMPS SUCTION LINE, AND FGD-A TO FGD-B CROSSOVER LINE TO BE RATED FOR A 100 PSI DESIGN PRESSURE.
9. ALL THREADED FITTINGS SHALL HAVE NATIONAL PIPE THREAD (NPT) THREADS.
10. CONCRETE SHALL CONFORM TO ACI 318 AND ACI 301 AS APPLICABLE. THE CONCRETE MIX DESIGN APPROVED BY THE OWNER'S REPRESENTATIVE SHALL HAVE A MINIMUM 28-DAY COMPRESSIVE STRENGTH OF 4,500 PSI. CONCRETE UTILIZED WITHIN THE FGD-A POND AND FGD-B POND SHALL BE SULFATE RESISTANT CONCRETE.
11. PIPE BEDDING AND EMBEDMENT SHALL CONSIST OF ON-SITE OR IMPORTED EARTHEN MATERIAL CLASSIFYING UNDER ASTM D2487 AS WELL-GRADED SAND (SW OR SW-SM) OR WELL-GRADED GRAVEL (GW OR GW-GM) OR AS OTHERWISE APPROVED IN WRITING BY THE OWNER'S REPRESENTATIVE. PIPE BEDDING SHALL CONTAIN NO PARTICLES LARGER THAN ½ INCH, AND FREE FROM ROOTS, DEBRIS, OR ANY OTHER SUBSTANCE THAT WOULD HARM THE PIPE OR MIGHT IMPAIR THE PERFORMANCE OF THE MATERIALS AS BEDDING OR EMBEDMENT FOR THE PIPE. FINAL MATERIAL SELECTION SHALL BE APPROVED BY THE OWNER'S REPRESENTATIVE.
12. CRUSHED STONE FOR ROADWAY SURFACING SHALL BE APPROVED BY OWNER'S REPRESENTATIVE.
13. WASHED GRAVEL FOR DRAIN LINE EMBEDMENT IN THE FGD-A POND AND FGD-B POND SHALL BE APPROVED BY OWNER'S REPRESENTATIVE.

- SEE NOTE 3

**POINT GROUPS**

- 3000 TOP OF EXCAVATED CLAY
- 3387 SEE NOTE 4

**NOTES**

1. CONTROL POINTS ARE SET TO GENERALLY PROVIDE A MINIMUM 2.2-FT THICK CLAY FOLLOWING EXCAVATION. A 0.2-FT BUFFER IS INCLUDED TO ACCOUNT FOR POTENTIAL CLAY LAYER THICKNESS REDUCTION DURING RECOMPACTION.
2. THE FLOOR SHALL BE EXCAVATED TO A UNIFORM ELEVATION OF 421.20 FT
3. THE UPPER PORTION OF THE EXISTING CLAY LINER HAS BEEN ERODED. SEE DRAWING 10.
4. ATTENTION IS DRAWN TO POINTS SHOWN INSIDE A BORDER. BASED ON AS-BUILT INFORMATION, THESE POINTS MAY HAVE LESS THAN A 0.2-FT OF BUFFER.
5. EXCAVATIONS THROUGH FGD-A POND EMBANKMENT SHALL BE COMPLETED AT MAXIMUM SLOPES OF 2H:1V IN ACCORDANCE WITH CROSS SECTION A ON DRAWING 19, OR AN ALTERNATE EXCAVATION CONFIGURATION THAT MEETS APPLICABLE OSHA AND LUMINANT REQUIREMENTS.
6. PIPE INSTALLATION THROUGH THE FGD-A POND EMBANKMENT SHALL BE COMPLETED DURING THE LINER RETROFIT WORK. EMBANKMENT FILL (MORE THAN 12-INCHES ABOVE THE PIPE) SHALL CONSIST OF SOILS EXCAVATED AS PART OF THE WORK AS APPROVED BY THE OWNER'S REPRESENTATIVE. IF EXCAVATED SOILS ARE DEEMED UNSUITABLE, EMBANKMENT FILL SHALL CONSIST OF IMPORTED EARTHEN MATERIALS APPROVED BY THE OWNER'S REPRESENTATIVE. EMBANKMENT FILL SHALL BE PLACED IN HORIZONTAL LOOSE LIFTS NOT EXCEEDING 10-INCHES IN THICKNESS AND MOISTURE CONDITIONED TO 1 PERCENT BELOW TO 3 PERCENT ABOVE STANDARD PROCTOR (ASTM D698) OPTIMUM MOISTURE CONTENT. EMBANKMENT FILL SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY.
7. CLAY LINER (OR GENERAL FILL OVERLAID BY EQUIVALENT OWNER-APPROVED GCL), GEOMEMBRANE LINER, AND PROTECTIVE COVER SHALL BE PLACED ON THE INSIDE FACE OF THE EMBANKMENT DURING THE LINER RETROFIT WORK IN ACCORDANCE WITH THE LINER QUALITY CONTROL PLAN.

4. EXCAVATION THROUGH THE FGD-A POND EMBANKMENT SHALL BE COMPLETED AT MAXIMUM SLOPES OF 2H:1V IN ACCORDANCE WITH CROSS SECTION A ON DRAWING 19, OR AN ALTERNATE EXCAVATION CONFIGURATION THAT MEETS APPLICABLE OSHA AND LUMINANT REQUIREMENTS.
5. UNDERGROUND PIPING (THROUGH THE FGD-A POND EMBANKMENT) SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE PIPE PENETRATION THROUGH THE PROTECTIVE COVER, THE COMPACTED CLAY LINER, AND THE FIRST FIVE (5) FEET OF EMBANKMENT FILL SHALL NOT HAVE GRANULAR BEDDING OR BACKFILL.
6. NO PIPING OR CONCRETE SHOULD BE IN DIRECT CONTACT WITH THE GEOMEMBRANE. A 12-OZ NON-WOVEN GEOTEXTILE SHALL BE PLACED BETWEEN THE CONCRETE AND THE GEOMEMBRANE. A 60 mil HDPE GEOMEMBRANE RUB-SHEET SHALL BE TACK WELDED TO THE LINER IN AREAS WHERE PIPING IS RESTING ON THE LINER.
7. A SULFATE RESISTANT CONCRETE MIX DESIGN APPROVED BY THE OWNER'S REPRESENTATIVE SHALL HAVE A MINIMUM 28-DAY COMPRESSIVE STRENGTH OF 4,500 PSI. CONCRETE COLLAR TO EXTEND APPROXIMATELY THREE (3) FEET AROUND THE RISER PIPE AND TO HAVE A MINIMUM OF 12 INCHES OF COVER ABOVE THE PIPE.
8. CONTRACTOR TO FIELD IDENTIFY TIE-IN LOCATION AND INDICATE ANY PROPOSED CHANGES TO TIE-IN FOR OWNER'S APPROVAL.
9. PIPE INSTALLATION THROUGH THE FGD-A POND EMBANKMENT SHALL BE COMPLETED DURING THE LINER RETROFIT WORK. CLAY LINER (OR GENERAL FILL OVERLAID BY EQUIVALENT OWNER-APPROVED GCL), GEOMEMBRANE LINER, AND PROTECTIVE COVER SHALL BE PLACED ON THE INSIDE FACE OF THE EMBANKMENT DURING THE LINER RETROFIT WORK IN ACCORDANCE WITH THE LINER QUALITY CONTROL PLAN. PIPING WITHIN FGD-A POND SHALL BE COMPLETED AFTER PROTECTIVE COVER PLACEMENT.
10. THE PROPOSED FGD-A POND DRAIN LINE TO FOLLOW THE SAME PROFILE AS THE PROPOSED FGD-A POND TO FGD-B POND CROSSOVER PIPELINE THROUGH THE EMBANKMENT WHICH SEPARATES THE TWO PONDS. THE FGD-A POND DRAIN LINE SHALL BE DAYLIGHTED NEAR THE EXISTING KNIFE GATE VALVE ON THE FGD-A POND TO FGD-B POND CROSSOVER PIPELINE AND TERMINATED WITH A KNIFE GATE VALVE AND BLIND FLANGE.

**NOTE(S)**

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK
2. CONTRACTOR IS RESPONSIBLE FOR LOCATING AND PROTECTING ALL EXISTING UNDERGROUND, ABOVE-GRADE, AND OVERHEAD UTILITIES.
3. ALL NEW PIPING SHALL BE HIGH DENSITY POLYETHYLENE (HDPE) DR-11 (IRON PIPE SIZING) SOLID WALL UNLESS OTHERWISE INDICATED.
4. EXCAVATIONS THROUGH FGD-B POND EMBANKMENT SHALL BE COMPLETED AT MAXIMUM SLOPES OF 2H:1V IN ACCORDANCE WITH CROSS SECTION A ON DRAWING 19, OR AN ALTERNATE EXCAVATION CONFIGURATION THAT MEETS APPLICABLE OSHA AND LUMINANT REQUIREMENTS. THE EXISTING GEOMEMBRANE LINER SHALL BE CLEANLY CUT AND GENTLY PEELED AWAY FROM THE PROPOSED EXCAVATION. FOLLOWING COMPLETION OF THE PIPELINE, EMBANKMENT FILL, AND CLAY LINER (OR EMBANKMENT FILL OVERLAID BY EQUIVALENT OWNER-APPROVED GCL) CONSTRUCTION, THE GEOMEMBRANE SHALL BE LAID BACK AND WELDED USING GEOMEMBRANE CAPSTRIPS AS APPROPRIATE.
5. UNDERGROUND PIPING (THROUGH THE FGD-B POND EMBANKMENT) SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE PIPE PENETRATION THROUGH THE PROTECTIVE COVER, THE COMPACTED CLAY LINER, AND THE FIRST FIVE (5) FEET OF EMBANKMENT FILL SHALL NOT HAVE GRANULAR BEDDING OR BACKFILL.
6. NO PIPING OR CONCRETE SHOULD BE IN DIRECT CONTACT WITH THE GEOMEMBRANE. A 12-OZ NON-WOVEN GEOTEXTILE SHALL BE PLACED BETWEEN THE CONCRETE AND THE GEOMEMBRANE. A 60 mil HDPE GEOMEMBRANE RUB-SHEET SHALL BE TACK WELDED TO THE LINER IN AREAS WHERE PIPING IS RESTING ON THE LINER.
7. A SULFATE RESISTANT CONCRETE MIX DESIGN APPROVED BY THE OWNER'S REPRESENTATIVE SHALL HAVE A MINIMUM 28-DAY COMPRESSIVE STRENGTH OF 4,500 PSI. CONCRETE COLLAR TO EXTEND APPROXIMATELY THREE (3) FEET AROUND THE RISER PIPE AND TO HAVE A MINIMUM OF 12 INCHES OF COVER ABOVE THE PIPE.
8. EARTHEN BERM ANCHORAGES WILL BE PROVIDED AT APPROXIMATELY 400-FOOT INTERVALS ALONG THE FGD-B TO PUMPS SUCTION PIPELINE. PIPING BETWEEN THE EARTHEN BERMS SHALL BE SNAKED APPROXIMATELY 20 FEET OFF OF A STRAIGHT LINE ALIGNMENT WITH 20 FEET HORIZONTAL CLEARANCE TO ALLOW THE HDPE PIPES TO EXPAND OR CONTRACT.
9. CLEARING AND GRUBBING PLAN TO BE APPROVED BY OWNER.
10. LOCAL GRADING TO BE DONE ALONG THE ALIGNMENT TO MINIMIZE LOCALIZED HIGH AND LOW SPOTS.
11. EARTHEN CONTAINMENT BERM TO BE 4-FEET (MIN.) ABOVE EXISTING GRADES BETWEEN ALIGNMENT STATIONS 0+00 AND 2+50, AND TRANSITION TO BE 2-FEET (MIN.) ABOVE EXISTING GRADES BETWEEN ALIGNMENT STATIONS 2+50 AND 11+00.
12. CULVERT PIPING SHALL BE ADS N-12 ST IB HDPE PIPE OR EQUIVALENT APPROVED BY THE OWNER'S REPRESENTATIVE.
13. CULVERT THROUGH CONTAINMENT BERM SHALL BE SITUATED AT THE LOWEST ELEVATION ON THE UPSTREAM SIDE OF THE CONTAINMENT BERM AND SHALL BE ORIENTED TO ALLOW FOR DRAINAGE DURING PRECIPITATION EVENTS.

NOTE(S)

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK.
2. CONTRACTOR IS RESPONSIBLE FOR LOCATING AND PROTECTING ALL EXISTING UNDERGROUND, ABOVE-GRADE, AND OVERHEAD UTILITIES.
3. ALL NEW PIPING SHALL BE HIGH DENSITY POLYETHYLENE (HDPE) DR-11 (IRON PIPE SIZING) SOLID WALL UNLESS OTHERWISE INDICATED.
4. EXCAVATIONS THROUGH FGD-B POND EMBANKMENT SHALL BE COMPLETED AT MAXIMUM SLOPES OF 2H:1V IN ACCORDANCE WITH CROSS SECTION A ON DRAWING 19, OR AN ALTERNATE EXCAVATION CONFIGURATION THAT MEETS APPLICABLE OSHA AND LUMINANT REQUIREMENTS. THE EXISTING GEOMEMBRANE LINER SHALL BE CLEANLY CUT AND GENTLY PEELED AWAY FROM THE PROPOSED EXCAVATION. FOLLOWING COMPLETION OF THE PIPELINE, EMBANKMENT FILL, AND CLAY LINER (OR EMBANKMENT FILL OVERLAID BY EQUIVALENT OWNER-APPROVED GCL) CONSTRUCTION, THE GEOMEMBRANE SHALL BE LAID BACK AND WELDED USING GEOMEMBRANE CAPSTRIPS AS APPROPRIATE.
5. UNDERGROUND PIPING (THROUGH THE FGD-B EMBANKMENT) SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE PIPE PENETRATION THROUGH THE PROTECTIVE COVER, THE COMPACTED CLAY LINER, AND THE FIRST FIVE (5) FEET OF EMBANKMENT FILL SHALL NOT HAVE GRANULAR BEDDING OR BACKFILL.
6. NO PIPING OR CONCRETE SHOULD BE IN DIRECT CONTACT WITH THE GEOMEMBRANE. A 12-OZ NON-WOVEN GEOTEXTILE SHALL BE PLACED BETWEEN THE CONCRETE AND THE GEOMEMBRANE.
7. A SULFATE RESISTANT CONCRETE MIX DESIGN APPROVED BY THE OWNER'S REPRESENTATIVE SHALL HAVE A MINIMUM 28-DAY COMPRESSIVE STRENGTH OF 4,500 PSI. CONCRETE COLLAR TO EXTEND APPROXIMATELY THREE (3) FEET AROUND THE RISER PIPE AND TO HAVE A MINIMUM OF 12 INCHES OF COVER ABOVE THE PIPE.
8. EMBANKMENT FILL (MORE THAN 12 INCHES ABOVE THE PIPE) SHALL CONSIST OF SOILS EXCAVATED AS PART OF THE WORK AS APPROVED BY THE OWNER'S REPRESENTATIVE. IF EXCAVATED SOILS ARE DEEMED UNSUITABLE, EMBANKMENT FILL SHALL CONSIST OF IMPORTED EARTHEN MATERIALS APPROVED BY THE OWNER'S REPRESENTATIVE. EMBANKMENT FILL SHALL BE PLACED IN HORIZONTAL LOOSE LIFTS NOT EXCEEDING TEN (10) INCHES IN THICKNESS AND MOISTURE CONDITIONED TO 1 PERCENT BELOW TO 3 PERCENT ABOVE STANDARD PROCTOR (ASTM D698) OPTIMUM MOISTURE CONTENT. EMBANKMENT FILL SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY. CLAY LINER (OR GENERAL FILL OVERLAID BY EQUIVALENT OWNER-APPROVED GCL), GEOMEMBRANE LINER, AND PROTECTIVE COVER SHALL BE PLACED ON THE INSIDE FACE OF THE EMBANKMENT IN ACCORDANCE WITH THE LINER QUALITY CONTROL PLAN AFTER CONSTRUCTING THE PIPELINES THROUGH THE EMBANKMENT.

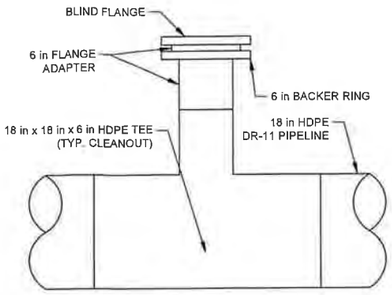
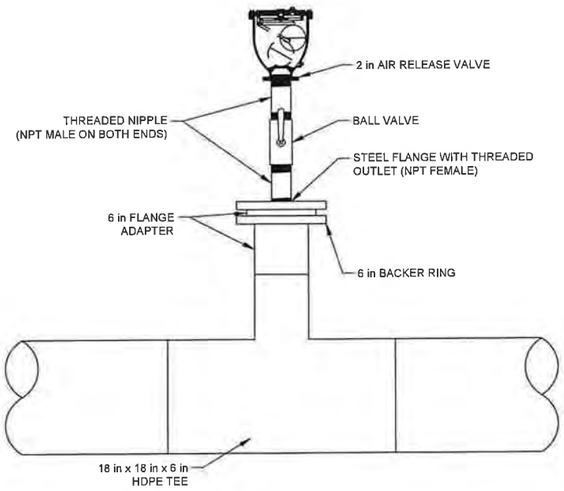
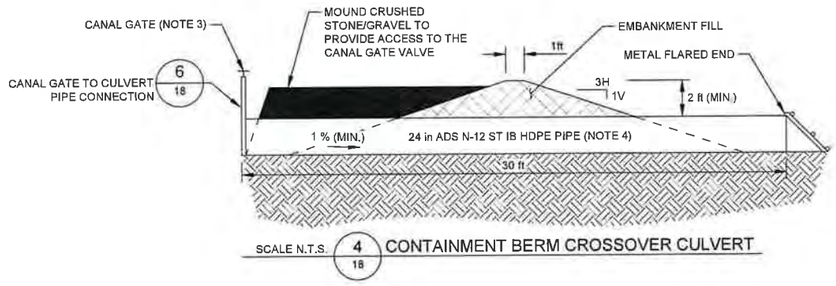
SCALE N.T.S. 1/18 TYPICAL PIPE PENETRATION



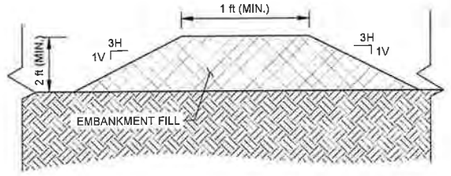
SCALE N.T.S. 2/18 TYPICAL CLEANOUT



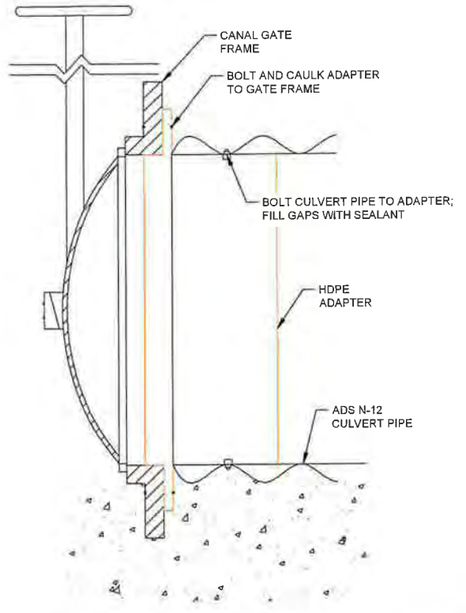
SCALE N.T.S. 3/18 TYPICAL AIR VALVE DETAIL



SCALE N.T.S. 4/18 CONTAINMENT BERM CROSSOVER CULVERT



SCALE N.T.S. 5/18 TYPICAL EARTHEN CONTAINMENT BERM



SCALE N.T.S. 6/18 CANAL GATE TO CULVERT PIPE CONNECTION

**NOTE(S)**

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK.
2. CONTINUOUS ONE-HALF-INCH STAINLESS STEEL CLAMPS WITH A GASKET BETWEEN THE HDPE PIPE AND HDPE LINER BELOW THE STEEL CLAMPS, AND A CONTINUOUS STRIP OF NEOPRENE RUBBER CUSHION BETWEEN THE STAINLESS STEEL CLAMPS AND THE HDPE LINER.
3. THE CULVERT CANAL GATE VALVE SHALL BE A WATERMAN C-10 CANAL GATE WITH HDPE ADAPTER, TUBE SEAL, AND BACK FRAME ATTACHMENTS OR AN EQUIVALENT APPROVED BY THE OWNER'S REPRESENTATIVE. CANAL GATE VALVES AND FITTINGS SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURERS RECOMMENDATIONS
4. CULVERT PIPING SHALL BE ADS N-12 ST IB HDPE PIPE OR EQUIVALENT APPROVED BY THE OWNER'S REPRESENTATIVE.
5. CULVERT FITTINGS (METAL FLARED END SECTIONS, ETC.) SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS
6. CULVERT SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.
7. CONTRACTOR SHALL USE CARE WHEN COMPACTING EMBANKMENT FILL AROUND THE CULVERT AND SHALL USE HAND AND/OR REMOTE COMPACTION EQUIPMENT UNTIL THE PIPE HAS APPROXIMATELY 2-FEET OF COVER

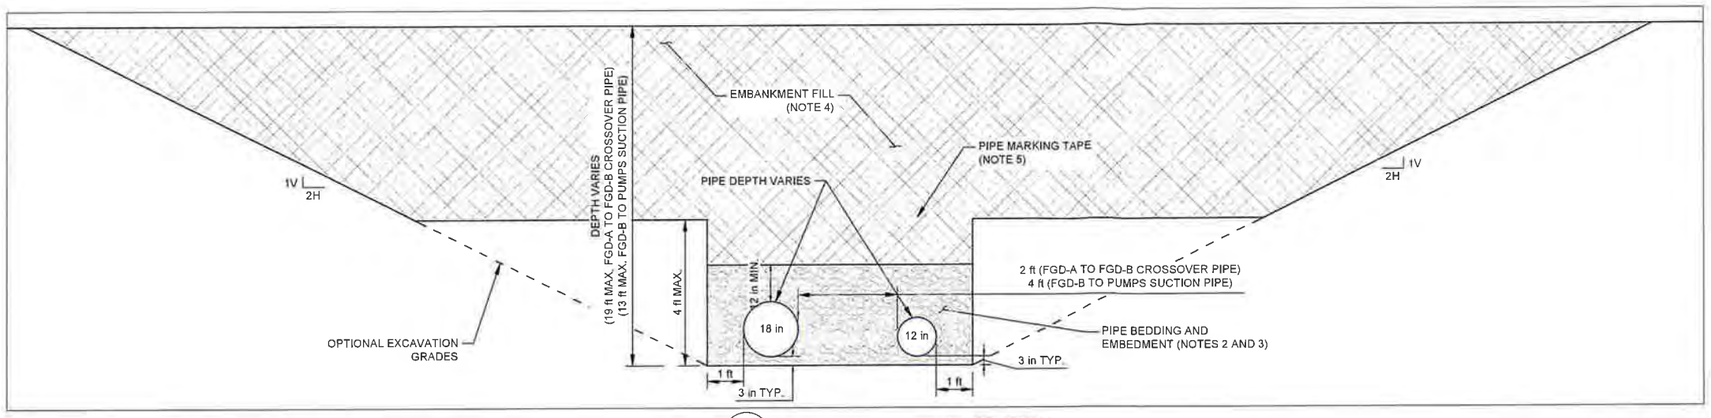
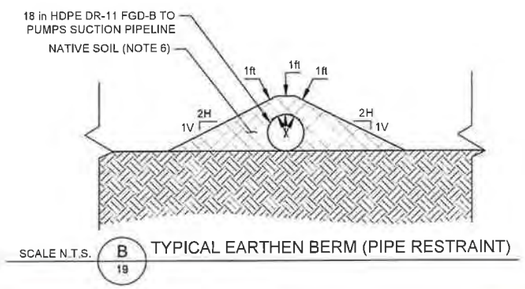
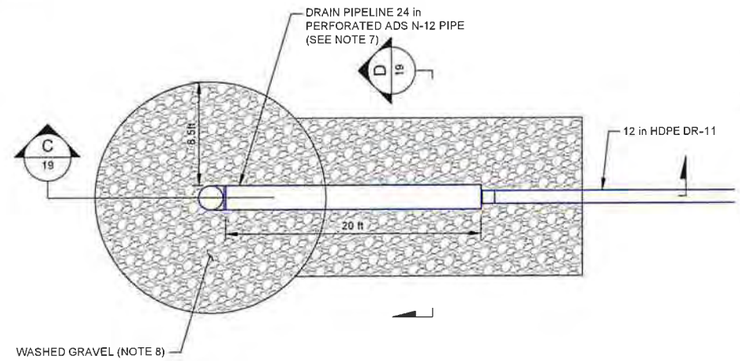
IF THIS MEASUREMENT DOES NOT MATCH WHAT IS SHOWN, THE SHEET SIZE HAS BEEN ALTERED FROM ANSI D



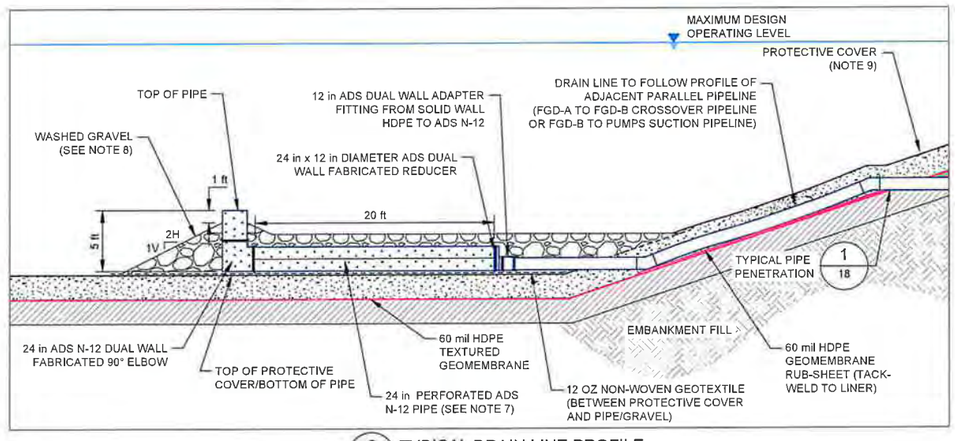
SCALE N.T.S. A 19 TYPICAL PIPE BACKFILL SECTION



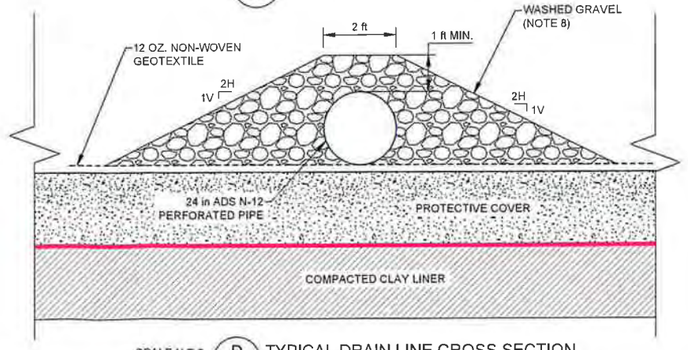
SCALE N.T.S. B 19 TYPICAL EARTHEN BERM (PIPE RESTRAINT)



SCALE N.T.S. 1 19 TYPICAL DRAIN LINE PLAN VIEW



SCALE N.T.S. C 19 TYPICAL DRAIN LINE PROFILE



SCALE N.T.S. D 19 TYPICAL DRAIN LINE CROSS SECTION

NOTE(S)

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK.
2. PIPE BEDDING AND EMBEDMENT SHALL CONSIST OF ON-SITE OR IMPORTED EARTHEN MATERIAL CLASSIFYING UNDER ASTM D2487 AS WELL-GRADED SAND (SW OR SW-SM) OR WELL-GRADED GRAVEL (GW OR GW-GM) OR AS OTHERWISE APPROVED IN WRITING BY THE OWNER'S REPRESENTATIVE. PIPE BEDDING SHALL CONTAIN NO PARTICLES LARGER THAN 0.5-INCH, AND FREE FROM ROOTS, DEBRIS, OR ANY OTHER SUBSTANCE THAT WOULD HARM THE PIPE OR MIGHT IMPAIR THE PERFORMANCE OF THE MATERIAL AS BEDDING FOR THE PIPE. FINAL MATERIAL SELECTION SHALL BE APPROVED BY THE OWNER'S REPRESENTATIVE.
3. UNDERGROUND PIPING SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE MATERIAL DIRECTLY ABOVE THE PIPE IN THE EMBEDMENT ZONE SHALL BE ONLY LIGHTLY COMPACTED TO AVOID DISTORTING THE PIPE.
4. EMBANKMENT FILL (MORE THAN 12 INCHES ABOVE THE PIPE) SHALL CONSIST OF SOILS EXCAVATED AS PART OF THE WORK AS APPROVED BY THE OWNER'S REPRESENTATIVE. IF EXCAVATED SOILS ARE DEEMED UNSUITABLE, EMBANKMENT FILL SHALL CONSIST OF IMPORTED EARTHEN MATERIALS APPROVED BY THE OWNER'S REPRESENTATIVE. EMBANKMENT FILL SHALL BE PLACED IN HORIZONTAL LOOSE LIFTS NOT EXCEEDING TEN (10) INCHES IN THICKNESS AND MOISTURE CONDITIONED TO 1 PERCENT BELOW TO 3 PERCENT ABOVE STANDARD PROCTOR (ASTM D698) OPTIMUM MOISTURE CONTENT. EMBANKMENT FILL SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY.
5. FOR ALL UNDERGROUND PIPING, MARKING TAPE ENABLING DETECTION BY METAL DETECTOR (AS INDICATED IN THE SPECIFICATIONS) SHALL BE LOCATED ABOVE THE PIPE AT A DEPTH OF 1 TO 2 FEET BELOW THE FINISHED GRADE.
6. MATERIAL FOR EARTHEN BERM USED TO ANCHOR HDPE PIPE TO BE SPECIFIED BY OWNER. EARTHEN BERM TO EXTEND 6 FEET ALONG LENGTH OF PIPE.
7. DRAIN LINE PIPING WITHIN BOTH PONDS TO BE PERFORATED 24 inch ADS N-12 ST IB (SOIL TIGHT) PIPE AND FITTINGS. ADS PIPE TO BE INSTALLED PER MANUFACTURER'S RECOMMENDATIONS.
8. PERFORATED DRAIN LINE PIPING WITHIN THE POND TO BE SURROUNDED WITH WASHED GRAVEL (GRAVEL TO BE APPROVED BY OWNER) AS SHOWN ON THE DRAWINGS (I.E. MINIMUM 12 INCHES AROUND THE DRAIN PIPE).
9. EXTEND PROTECTIVE COVER TO EMBANKMENT CREST IN FGD-B POND, PROTECTIVE COVER ENDS AT ELEV. 425.5 FT IN FGD-A POND

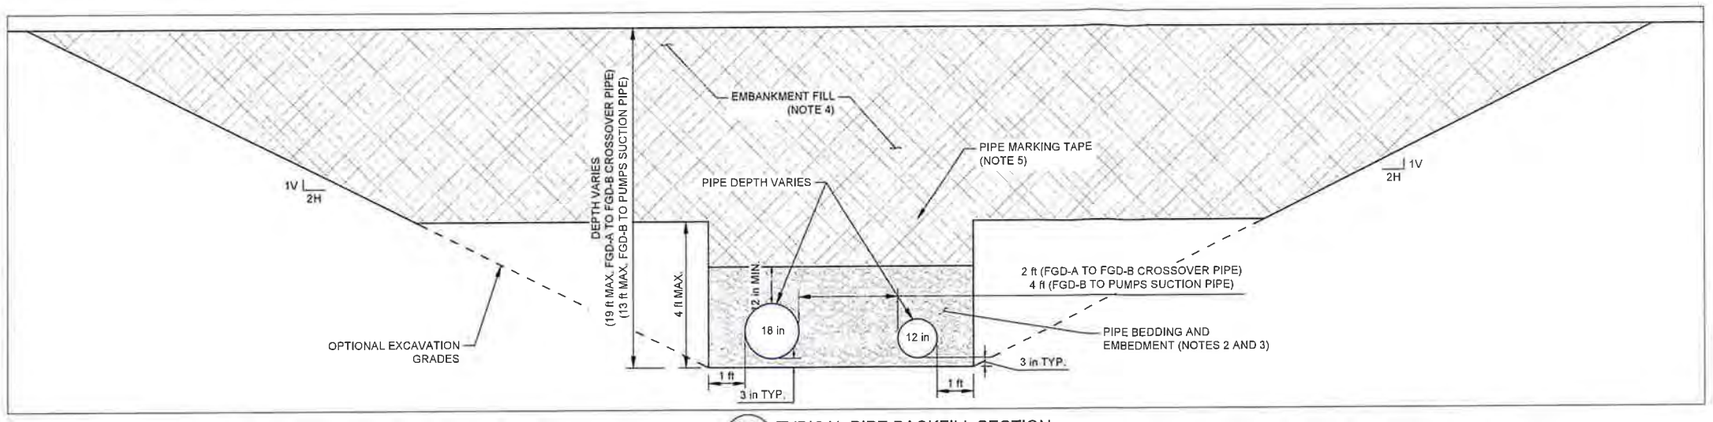
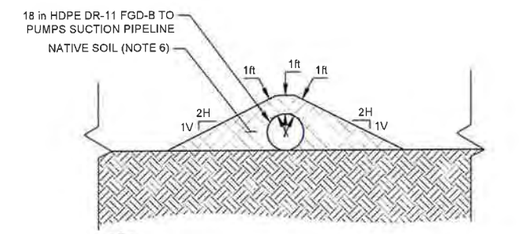
Path: I:\gdrive\golder.com\projects\active\NorthAmerica\Houston_North_America\NORSE\595_PRO_19129621_fgda\03_PRODUCTION\1 File Name 19129621-003.dwg | Last Edited By: rsalazar Date: 2021-09-16 Time: 2:47:05 PM | Plotted By: RSalazar Date: 2021-09-17 Time: 9:21:25 AM

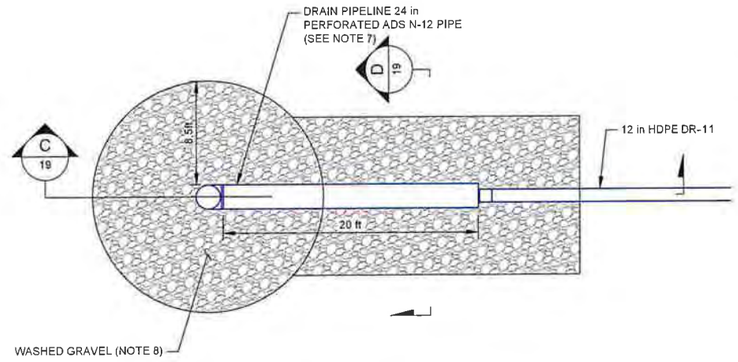
THIS DRAWING MUST BE PRINTED ON ANSI D (22" x 34") MEDIA. IF NOT, THE SCALE BAR WILL BE INCORRECT.



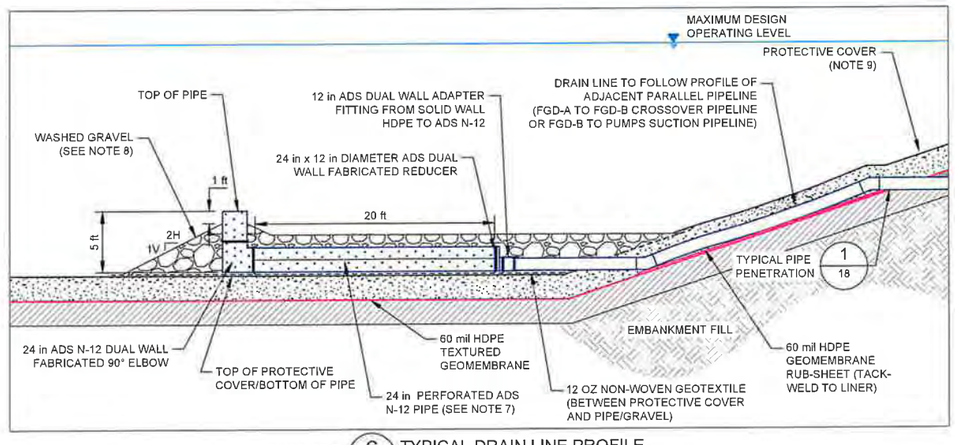
SCALE N.T.S. A 19 TYPICAL PIPE BACKFILL SECTION



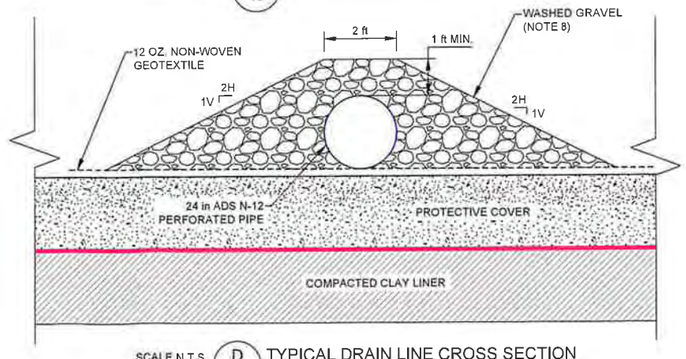
SCALE N.T.S. B 19 TYPICAL EARTHEN BERM (PIPE RESTRAINT)



SCALE N.T.S. 1 19 TYPICAL DRAIN LINE PLAN VIEW



SCALE N.T.S. C 19 TYPICAL DRAIN LINE PROFILE



SCALE N.T.S. D 19 TYPICAL DRAIN LINE CROSS SECTION

NOTE(S)

1. ALL LUMINANT AND APPLICABLE OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK.
2. PIPE BEDDING AND EMBEDMENT SHALL CONSIST OF ON-SITE OR IMPORTED EARTHEN MATERIAL CLASSIFYING UNDER ASTM D2487 AS WELL-GRADED SAND (SW OR SW-SM) OR WELL-GRADED GRAVEL (GW OR GW-GM) OR AS OTHERWISE APPROVED IN WRITING BY THE OWNER'S REPRESENTATIVE. PIPE BEDDING SHALL CONTAIN NO PARTICLES LARGER THAN 0.5-INCH, AND FREE FROM ROOTS, DEBRIS, OR ANY OTHER SUBSTANCE THAT WOULD HARM THE PIPE OR MIGHT IMPAIR THE PERFORMANCE OF THE MATERIAL AS BEDDING FOR THE PIPE. FINAL MATERIAL SELECTION SHALL BE APPROVED BY THE OWNER'S REPRESENTATIVE.
3. UNDERGROUND PIPING SHALL BE BEDDED ON THREE (3) INCHES OF GRANULAR PIPE BEDDING MATERIAL AND EMBEDDED IN THE SAME MATERIAL TO TWELVE (12) INCHES ABOVE THE TOP OF THE PIPING. THE MATERIAL DIRECTLY ABOVE THE PIPE IN THE EMBEDMENT ZONE SHALL BE ONLY LIGHTLY COMPACTED TO AVOID DISTORTING THE PIPE.
4. EMBANKMENT FILL (MORE THAN 12 INCHES ABOVE THE PIPE) SHALL CONSIST OF SOILS EXCAVATED AS PART OF THE WORK AS APPROVED BY THE OWNER'S REPRESENTATIVE. IF EXCAVATED SOILS ARE DEEMED UNSUITABLE, EMBANKMENT FILL SHALL CONSIST OF IMPORTED EARTHEN MATERIALS APPROVED BY THE OWNER'S REPRESENTATIVE. EMBANKMENT FILL SHALL BE PLACED IN HORIZONTAL LOOSE LIFTS NOT EXCEEDING TEN (10) INCHES IN THICKNESS AND MOISTURE CONDITIONED TO 1 PERCENT BELOW TO 3 PERCENT ABOVE STANDARD PROCTOR (ASTM D698) OPTIMUM MOISTURE CONTENT. EMBANKMENT FILL SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY.
5. FOR ALL UNDERGROUND PIPING, MARKING TAPE ENABLING DETECTION BY METAL DETECTOR (AS INDICATED IN THE SPECIFICATIONS) SHALL BE LOCATED ABOVE THE PIPE AT A DEPTH OF 1 TO 2 FEET BELOW THE FINISHED GRADE.
6. MATERIAL FOR EARTHEN BERM USED TO ANCHOR HDPE PIPE TO BE SPECIFIED BY OWNER. EARTHEN BERM TO EXTEND 6 FEET ALONG LENGTH OF PIPE.
7. DRAIN LINE PIPING WITHIN BOTH PONDS TO BE PERFORATED 24 inch ADS N-12 ST IB (SOIL TIGHT) PIPE AND FITTINGS. ADS PIPE TO BE INSTALLED PER MANUFACTURER'S RECOMMENDATIONS.
8. PERFORATED DRAIN LINE PIPING WITHIN THE POND TO BE SURROUNDED WITH WASHED GRAVEL (GRAVEL TO BE APPROVED BY OWNER) AS SHOWN ON THE DRAWINGS (I.E. MINIMUM 12 INCHES AROUND THE DRAIN PIPE).
9. EXTEND PROTECTIVE COVER TO EMBANKMENT CREST IN FGD-B POND. PROTECTIVE COVER ENDS AT ELEV. 425.5 FT IN FGD-A POND.

# General

# SECTION 01 11 00
# SUMMARY OF WORK

## 1.0 GENERAL

### 1.1 Description

A. Provide all labor, materials, and equipment to complete Project as depicted on the Construction Drawings entitled "Oak Grove Steam Electric Station, FGD-A Pond Retrofit, Robertson County, Texas", dated November 2020, and as described in the Technical Specifications.

### 1.2 Description of Work

A. The Project consists of retrofitting FGD-A Pond with a liner system meeting the requirements of the Environmental Protection Agency CCR regulations (40 Code of Federal Regulations Part 257, "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities; Final Rule", part §257.72).

B. The FGD-A Pond is a surface impoundment constructed in 2008.

C. The FGD-A Work generally consists of:

1. Removal of any remaining CCR and roughly the upper 1 foot of the existing 3-foot thick clay liner.
2. Installation of a cross-over intake riser and pipeline connecting FGD-A Pond and FGD-B Pond.
3. Installation of a drain pipeline through the FGD-A Pond embankment.
4. Scarification and recompaction of the upper 6 inches of the exposed clay liner.
5. Placement of general fill in areas where the clay liner has eroded on the sideslopes.
6. Repair of areas of clay liner not meeting the hydraulic conductivity criterion ($\leq 1 \times 10^{-7}$ cm/s) (if any), by:
   a. Placement of GCL over area; or
   b. Removal and recompaction of clay in 6-inch lifts to form a 2-foot thick clay liner.
7. Installation of a geomembrane over the clay liner/GCL.
8. Access ramp construction
9. Extension of the "peninsula" by 120 feet.
10. Placement of revetment on the upper portions of the lined interior sideslopes.
11. Placement of protective cover on the liner floor.
12. Demolition of existing Reclaim/Recycle pump intake riser in FGD-A Pond and installation of new intake riser.
13. Raise/extend FGD-A Pond inlet pipes from the plant drain lines.
14. Extend or shorten FGD-A Pond inlet return pipes from the Reclaim/Recycle pump structure.

D. FGD-B Pond will also be upgraded, as follows:

1. Installation of an intake riser and pipeline through FGD-B Pond embankment and run on-grade to connect to the suction side of the Reclaim/Recycle pumps.
2. Installation of a drain pipeline through the FGD-B Pond embankment.

3. Construction of earthen containment berm along the length of the FGD-B Pond to Pumps pipeline.
4. Installation of valved drainage culvert at low point in the earthen containment berm.

## 1.3 Use of Premises

A. The Contractor shall have full use of the premises, as approved by the Owner, for construction operations, including use of the Project Site, during the construction period. The Contractor's use of premises is limited only by the Owner's right to perform work or to retain other Contractors on portions of work related to this project.

B. Project Site is an active and operating power generation plant (the Plant). As such, the Contractor's use of premises shall not impede the continuing operation and activity of the Plant.

C. The Contractor shall furnish all labor, tools, materials, equipment, and supervision as may be required to complete the Work.

D. All excavations and shoring shall comply with the requirements of applicable federal and state excavation safety standards.

E. The Work shall be done in strict accordance with these Specifications and as indicated in the Bid documents and on the Drawings.

# 2.0 PRODUCTS

## 2.1 Submittals

A. Submittals for all products/materials used on the project shall be provided by the Contractor to the Owner's Representative for review. The submittals shall include, but not be limited to, geosynthetics, slope revetment, soils, aggregates, piping and appurtenances, pipe coating/painting, heat tracing plan, concrete, revegetation plans, stormwater pumps, etc.

B. Submittals shall also be produced by the Contractor for the Owner's review for documents including, but not limited to, Health and Safety Plan, equipment extraction plan, trenching safety plan, groundwater/surface water control plan, locations of temporary stockpiles and staging areas, Spill Prevention Control and Countermeasure Plan, Stormwater Pollution Prevention Plan, and Dust Control Plan. These items shall be submitted prior to the contractor coming on site.

# 3.0 EXECUTION

## 3.1 General Responsibilities of the Contractor

A. The Contractor shall execute all construction work stated in this Section and in the manner specified or illustrated in the Contract Documents and Construction Drawings. Any omission in these Technical Specifications does not release the Contractor from the responsibility to complete the Work or any part of the Work to the satisfaction of the Owner or his/her representative.

B. The Contractor shall develop, and submit to the Owner, a Spill Prevention Control and Countermeasure (SPCC) Plan for the fuels and oils stored and used on site during the project. The SPCC plan must cover storage tanks, tank trucks, and equipment used on site during the project. The SPCC plan shall be certified by a Professional Engineer licensed in the State of Texas.

C. The Contractor shall prepare a written Health and Safety Plan and submit to the Owner. The Contractor is solely responsible for the safety of their employees and subcontractors.

D. The Contractor shall provide field stake-out surveying as necessary to comply with the Construction Drawings. All project materials, labor, and equipment necessary to comply with all conditions identified in the project documents and incidental to the project shall be included in the Contractor's lump sum and/or unit prices contained on the Contractor's Bid Form.

## 3.2 General Responsibilities of the Owner

A. The Owner will supply available water for dust control and soil compaction, which can be drawn from on-site ponds or as designated by the Owner, subject to approval by the Owner. Note that Contractor is to provide Dust Control Plan, which is subject to approval by the Owner.

B. The Owner will supply third-party Construction Quality Assurance (CQA) to confirm that the Work performed by the Contractor(s) is in compliance with the approved Construction Drawings and Technical Specifications.

C. The Owner will supply surveying for construction certification, payment verification, and construction quality assurance (CQA) only.

## 3.3 Meetings

A. Weekly progress meetings shall be held to facilitate communications with the Owner. At a minimum, these meetings should be attended by the Owner's Representative and Contractor. The purpose of these meetings will be to:

1. Review the previous week's activities.
2. Review activities planned for the upcoming week.
3. Identify Contractor's equipment and personnel assignments for the week.
4. Provide review and updates regarding the material test results performed by the Owner's Representative.
5. Discuss any problems or potential problems, including safety issues.
6. Review test data.
7. Provide updates to the Construction Schedule

***END OF SECTION***

**SECTION 01 22 00**
**MEASUREMENT AND PAYMENT**

# 1.0 GENERAL

## 1.1 Description

A. This Section includes administrative and procedural requirements for measurement and payment of each bid item.

B. Payment to be received after work is installed. Payment for material on hand can only be paid for if allowed by the Agreement, the General and/or Special Conditions.

C. All invoices should be sent as a draft for review to the Luminant/Vistra Project Manager. Once reviewed and approved, invoices may be uploaded to the Luminant/Vistra Payment Services.

## 1.2 RELATED DOCUMENTS:

A. The Drawings, the Specifications, and general provisions of the Contract, including General and Supplementary Conditions, are related to this Section.

B. The items listed in this section refer to and are the same as the pay items listed on the Bid Form.

## 1.3 DEFINITIONS:

A. Compensation for all such services and materials shall be included in the prices stipulated for the lump sum and unit price pay items listed herein. Items of Work not specifically included in this Section for measurement and payment as described herein will not be measured for payment, but will be considered incidental to the Contract with the associated costs borne solely by the Contractor. Lump sum is an amount proposed by bidders, stated on the Bid Form, as a price for payment for defined items required by the Contract Documents.

## 1.4 Procedures:

A. Items include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead and profit.

B. Estimated neat-line material quantities are provided on the Bid Form for reference only. The Contractor is responsible for verifying material quantities as part of the bidding process. The Contractor shall notify the Owner of any discrepancy as soon as it is discovered so that the Owner can clarify the requirements prior to bid submittal.

# 2.0 EXECUTION

## 2.1 GENERAL COSTS

A. Item 1 - Mobilization/Demobilization:

1. Measurement for Mobilization/Demobilization shall be by lump sum. Payment for Mobilization/Demobilization shall include, but not be limited to, all costs to mobilize and demobilize all labor, equipment, supplies, tools, parts trailers, portable shop facilities, fuel tanks, and all other incidentals required to perform the Work and complete cleanup of the work areas, including waste disposal, to the satisfaction of the Owner's Representative.

2. The lump sum payment for Mobilization/Demobilization shall be payment in full on the basis of satisfactory evidence of mobilization of sufficient labor, equipment, and material to adequately advance the work. Fifty (50) percent of the lump sum price will be paid with the first payment request following satisfactory evidence of additional mobilization of sufficient labor, equipment, and material to adequately progress the work of this contract. Fifty (50) percent of the Lump Sum price bid will be paid with the Final Payment request.

B. Item 2 – Miscellaneous Site Work & Materials:

1. Measurement for Miscellaneous Site Work & Materials shall be by lump sum. Payment for Miscellaneous Site Work & Materials shall include, but not be limited to, all costs necessary to provide horizontal and vertical survey control, site trailer, sanitary and other temporary facilities, erosion control, dewatering, and all necessary permits.

2. The lump sum payment for Miscellaneous Site Work & Materials shall be payment in full on the basis of satisfactory evidence of mobilization of sufficient labor, equipment, and material to adequately advance the work. Fifty (50) percent of the lump sum price will be paid with the first payment request following satisfactory evidence of establishment of sufficient labor, equipment, and material to adequately progress the work of this contract. Fifty (50) percent of the Lump Sum price bid will be paid with the Final Payment request.

## 2.2 Liner Retrofit costs

C. Item 3 – Remove Coal Combustion Residuals (CCR) and Unsuitable Clay Liner:

1. Measurement for Remove CCR and Unsuitable Clay Liner shall be by contract unit price per cubic yard. Payment for Remove CCR and Unsuitable Clay Liner shall include, but not be limited to, all costs associated with the excavation, loading, hauling, and placement of remaining CCR and upper layer of the existing clay liner soil from FGD-A Pond to Ash Landfill 1 and providing all labor, materials, quality control, equipment, and incidentals to Remove CCR and Unsuitable Clay Liner in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Rainwater removal will not be measured and paid for separately but shall be included in the Work.

2. The volume of CCR and Unsuitable Clay Liner removed to achieve grade shown on the Drawings shall be calculated by 3-Dimensional Model based on the pre-construction topography and topography after excavation of CCR and unsuitable clay within the limits as shown on the Drawings.

D. Item 4 – Scarify/Recompact Upper 6 Inches of Clay Liner

1. Measurement for Scarify/Recompact Upper 6 Inches of Clay Liner shall be by contract unit price per square yard. Payment for Scarify/Recompact Upper 6 Inches of Clay Liner shall include, but not be limited to, all costs associated with the scarifying, processing, moisture conditioning, compacting, and preparing the surface of the clay liner and providing all labor, materials, quality control, equipment, and incidentals to Scarify/Recompact Upper 6 Inches of Clay Liner in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Rainwater removal will not be measured and paid for separately but shall be included in the Work.

2. The area of Scarify/Recompact Upper 6 Inches of Clay Liner shall be based on the surveyed area of the scarified/recompacted clay liner. The Owner shall estimate the actual area as shown by the 3-Dimensional Model and shall produce Record Drawings of the ground surface after recompaction.

E. Item 5 – Remove and Recompact Lower 24 inches of Clay Liner (if necessary)

1. Measurement for Remove/Recompact Lower 24 inches of Clay Liner shall be by contract unit price per cubic yard. Payment for Remove/Recompact Lower 24 Inches of Clay Liner shall include, but not be limited to, all costs associated with the removal of existing clay liner in failing area as identified by the Owner's Representative, processing, moisture conditioning, placing, compacting, and preparing the surface of the clay liner and providing all labor, materials, quality control, equipment, and incidentals to Remove/Recompact Lower 24 Inches of Clay Liner in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Rainwater removal will not be measured and paid for separately but shall be included in the Work.
2. The volume of Remove/Recompact Lower 24 Inches of Clay Liner shall be shall be calculated based on the surveyed area multiplied by 24 inches. The Owner shall estimate the actual area as shown by the 3-Dimensional Model and shall produce Record Drawings of the ground surface after replacement of the clay liner.

F. Item 6 - Place and Compact General Fill

1. Measurement for Place and Compact General Fill shall be by contract unit price per cubic yard. Payment for Place and Compact General Fill shall include, but not be limited to, all costs associated with the subgrade preparation, excavation, loading, hauling, double or multiple handling, stockpiling, placement, spreading, moisture conditioning, compaction, and trimming of soil materials and providing all labor, materials, quality control, equipment, and incidentals to achieve the lines and elevations indicated on the Drawings and in accordance with the Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.
2. The volume of General Fill needed to achieve subgrade shown on the Drawings shall be calculated by 3-Dimensional Model based on the topography of ground surface before and after grading within the limits as shown on the Drawings. No additional allowances shall be permitted for shrinkage, swelling, creep or unauthorized over-excavations beyond the approved depth or limits of excavation. The Owner shall estimate the actual volume of general fill as shown by the 3-Dimensional Model and shall produce Record Drawings of the ground surface before and after grading.

G. Item 7 – Supply GCL

1. Measurement for Supply GCL shall be by contract unit price per square foot. Payment for Supply GCL shall include, but not be limited to, all costs associated with manufacturing, manufacturer's testing, pre-delivery testing, and transporting the GCL meeting these Specifications and in accordance with the Liner Quality Control Plan.
2. The quantity of GCL will be based on the actual amount of approved GCL delivered to the Facility.

H. Item 8 – Install GCL

1. Measurement for Install GCL shall be by contract unit price per square foot. Payment for Install GCL shall include, but not be limited to, all costs associated with unloading, handling, storing, protecting, installing, seaming, testing, constructing the anchor trench, as well as all labor, materials, quality control, equipment, and incidentals, including accessory granular bentonite, to complete the work as indicated on the Drawings and in accordance with the Specifications and to the satisfaction of the Owner's Representative.
2. The quantity of GCL installed shall be the surveyed area. Allowance will be made for GCL in anchor trench; however, no allowance will be made for waste, overlap, repairs, materials used for convenience of the Contractor, replacing hydrated GCL, or material not meeting the Specifications. No additional allowance shall be permitted for unauthorized GCL installed beyond the limits as set forth by Owner's Representative following field

verification. The Owner shall estimate the actual area and shall show the locations and dimensions on Record Drawings.

I. Item 9 - Supply and Install Geomembrane

1. Measurement for Supply and Install Geomembrane shall be by contract unit price per square foot. Payment for Supply and Install Geomembrane shall include, but not be limited to, all costs associated with manufacturing, manufacturer's testing, pre-delivery testing, transporting, unloading, handling, storing, installing, seaming, testing, constructing anchor trench, as well as all labor, materials, quality control, equipment, and incidentals to complete the work as indicated on the Drawings in accordance with the Specifications and to the satisfaction of the Owner's Representative.

2. The quantity of Geomembrane shall be the surveyed area. Allowance will be made for Geomembrane in anchor trench; however, no allowance will be made for waste, overlap, repairs, or materials used for convenience of the Contractor. No additional allowance shall be permitted for unauthorized Geomembrane installed beyond the limits as set forth by Owner's Representative following field verification. The Owner shall estimate the actual area and shall show the locations and dimensions on Record Drawings.

J. Item 10 - Place Protective Cover

1. Measurement for Place Protective Cover shall be by contract unit price per cubic yard. The Protective Cover will consist of bottom ash supplied by the Owner. Payment for Place Protective Cover shall include, but not be limited to, all costs associated with the loading, hauling, double or multiple handling, stockpiling, placing, spreading, and grading and providing all labor, materials, quality control, equipment, and incidentals to Place Protective Cover to the lines and grades indicated on the Drawings in accordance with the Liner Quality Control Plan and to the satisfaction of the Owner's Representative. Water removal will not be measured and paid for separately but shall be included in the Work.

2. The volume of Protective Cover needed to achieve the minimum 1.5-foot thickness shall be calculated by multiplying the surveyed area of Protective Cover placement (minus the area of the ramp and peninsula)by 1.5 feet. No additional allowances shall be permitted for unauthorized amounts of Protective Cover in excess of the 1.5-foot thickness. The Owner shall estimate the actual area and shall show the locations and dimensions on Record Drawings.

K. Item 11 - Construct Ramp and Peninsula Extension Over Geosynthetics

1. Measurement for Construct Ramp and Peninsula Extension Over Geosynthetics shall be by contract unit price per cubic yard. The Ramp and Peninsula Extension will consist of bottom ash supplied by the Owner. Payment for Construct Ramp and Peninsula Extension shall include, but not be limited to, all costs associated with the loading, hauling, double or multiple handling, stockpiling, placing, spreading, moisture conditioning, grading, and providing all labor, materials, quality control, equipment, and incidentals to Construct Ramp and Peninsula Extension Over Geosynthetics to the lines and grades indicated on the Drawings in accordance with the Liner Quality Control Plan and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

2. The volume of Construct Ramp and Peninsula Extension Over Geosynthetics to achieve grades shown on the Drawings shall be calculated by 3-Dimensional Model based on the 3-dimensional model of the As-Constructed Clay Plan and topography after grading within the limits as shown on the Drawings.

L. Item 12 - Procure and Install Erosion Control Lining System

1. Measurement for Procure and Install Erosion Control Lining System shall be by contract unit price per square foot. Payment for Procure and Install Erosion Control Lining System shall include, but not be limited to, all costs associated with manufacturing, manufacturer's testing, pre-delivery testing, transporting, unloading, handling, storing, installing, seaming, testing, constructing anchor trench, as well as all labor, materials, quality control, equipment, and incidentals to complete the work as indicated on the Drawings in accordance with the Specifications and to the satisfaction of the Owner's Representative.
2. The quantity of Procure and Install Erosion Control Lining System shall be the surveyed area. Allowance will be made for Procure and Install Erosion Control Lining System in anchor trench; however, no allowance will be made for waste, overlap, repairs, or materials used for convenience of the Contractor. No additional allowance shall be permitted for unauthorized Erosion Control Lining System installed beyond the limits as set forth by Owner's Representative following field verification. The Owner shall estimate the actual area and shall show the locations and dimensions on Record Drawings.

## 2.3 Piping Modifications costs

M. Item 13 – FGD-A to FGD-B Crossover Pipeline Through Embankment (two pipes):

1. Measurement for FGD-A to FGD-B Crossover Pipeline Through Embankment shall be by lump sum. Payment for FGD-A to FGD-B Crossover Pipeline Through Embankment shall include, but not be limited to, all costs necessary to furnish and install 18-inch HDPE crossover piping, 12-inch HDPE drain piping, valves, fittings, and appurtenances, including providing horizontal and vertical control for 18-inch HDPE piping and 12-inch HDPE piping; clearing and grubbing, stripping and stockpiling topsoil, excavating and stockpiling clay liner, and excavating and stockpiling embankment fill material as required to install 18-inch HDPE crossover piping and 12-inch HDPE drain piping; cutting, demolishing, removing, and disposing of existing 12-inch crossover pipeline upstream of the existing 12-inch gate valve; excavating, stockpiling, and filling as required to install 18-inch HDPE crossover piping and 12-inch HDPE drain piping to the lines and elevations shown on the Drawings; furnishing, loading, hauling, stockpiling, and placing bedding and embedment materials (provided by the contractor) for 18-inch HDPE crossover piping and 12-inch HDPE drain piping; laying and joining 18-inch HDPE crossover piping, 12-inch HDPE drain piping, and fittings, including boots/penetrations, as indicated in the Drawings and Specifications; furnishing, fitting, and installing 12-inch knife gate valve; connecting new 18-inch HDPE crossover pipeline to existing 12-inch crossover pipeline and gate valve; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting backfill materials for 18-inch HDPE crossover piping and 12-inch HDPE drain piping; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting excavated clay (or general fill and installing geosynthetic clay liner as approved by Owner's Representative) on the upstream embankment slope; replacing stripped topsoil, revegetating, and placing erosion control mat on the downstream embankment slope; furnishing, loading, hauling stockpiling, placing, moisture conditioning, and compacting crushed stone roadway material; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch HDPE crossover piping and 12-inch HDPE drain piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

N. Item 14 – FGD-A to Pump Intake:

1. Measurement for FGD-A to Pump Intake shall be by lump sum. Payment for FGD-A to Pump Intake shall include, but not be limited to, all costs necessary to furnish and install 18-inch and 14-inch HDPE intake riser, fittings, boots/penetrations, and appurtenances, including providing horizontal and vertical control for 18-inch and 14-inch HDPE intake

riser; demolishing, loading, hauling, stockpiling, and disposing of existing concrete collar and intake pipe; furnishing, laying, and joining 18-inch and 14-inch HDPE intake riser to the lines and elevations shown on the Drawings; preparing subgrade; procuring, delivering, unloading, storing, transporting, deploying, and installing geotextile between geomembrane liner and concrete; furnishing, erecting, and stripping concrete forms; furnishing, placing, finishing, and curing concrete as indicated in the Drawings; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch and 14-inch HDPE intake riser and concrete collar in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

O. Item 15 – FGD-A to FGD-B Crossover Pipeline in FGD-A Pond (Run of Pipe):

1. Measurement for FGD-A to FGD-B Crossover Pipeline in FGD-A Pond (Run of Pipe) shall be by lump sum. Payment for FGD-A to FGD-B Crossover Pipeline in FGD-A Pond (Run of Pipe) shall include, but not be limited to, all costs necessary to furnish and install 18-inch HDPE crossover piping, intake vertical riser, concrete collar, fittings, and appurtenances, including providing horizontal and vertical control for 18-inch HDPE piping; filling and grading as required to install 18-inch HDPE crossover piping; furnishing, laying, and joining 18-inch HDPE crossover piping and intake riser to the lines and elevations shown in the Drawings; loading, hauling, double or multiple handling, stockpiling, placing, spreading, and grading and providing all labor, materials, quality control, equipment, and incidentals to Place Protective Cover over the 18-inch HDPE crossover piping to the lines and grades indicated on the Drawings; procuring, delivering, unloading, storing, transporting, deploying, and installing geomembrane rub-sheet; furnishing, erecting, and stripping concrete forms; furnishing, placing, finishing, and curing concrete as indicated in the Drawings; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch HDPE crossover piping, intake riser, and concrete collar in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

P. Item 16 – FGD-A Drain Line

1. Measurement for FGD-A Drain Line shall be by lump sum. Payment for FGD-A Drain Line shall include, but not be limited to, all costs necessary to furnish and install 24-inch perforated HDPE piping, 12-inch HDPE piping, fittings, and appurtenances, including providing horizontal and vertical control for 24-inch perforated HDPE piping and riser and 12-inch HDPE piping; filling and grading as required to install 24-inch perforated HDPE piping and riser and 12-inch HDPE piping; furnishing, laying, and joining 24-inch perforated HDPE piping and riser and 12-inch HDPE piping to the lines and elevations shown in the Drawings; procuring, delivering, unloading, storing, transporting, deploying, and installing geotextile and geomembrane rub-sheet; furnishing, loading, hauling, stockpiling, and placing washed gravel embedment; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 24-inch perforated HDPE piping and riser and 12-inch HDPE piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

Q. Item 17 – Extend FGD-A Pond Inlets (Return from Pumps)

1. Measurement for Extend FGD-A Pond Inlets (Return from Pumps) shall be by lump sum. Payment for Extend FGD-A Pond Inlets (Return from Pumps) shall include, but not be limited to, all costs necessary to extend or cut existing 4-inch HDPE inlet piping and 8-inch HDPE inlet piping to the lines and elevations shown in the Drawings, including providing horizontal and vertical control for 4-inch and 8-inch HDPE inlet piping; procuring, laying, and joining 4-inch and 8-inch HDPE inlet pipe extensions; cutting, removing, and disposing of excess 4-inch and 8-inch HDPE inlet piping; furnishing and installing pipe boot/penetrations; disposing of

waste; and providing all labor, materials, quality control, equipment, and incidentals to extend or cut 4-inch and 8-inch HDPE inlet piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative.

R. Item 18 – Extend FGD-A Pond Inlets (From Plant)

1. Measurement for Extend FGD-A Pond Inlets (From Plant) shall be by lump sum. Payment for Extend FGD-A Pond Inlets (From Plant) shall include, but not be limited to, all costs necessary to demolish the eleven existing HDPE inlet pipelines and replace with eleven new HDPE inlet pipelines at a higher elevation into the FGD-A Pond as shown in the Drawings, including providing horizontal and vertical control for HDPE inlet piping; excavating and stockpiling existing embankment material; cutting, removing, and disposing of eleven existing HDPE inlets (piping extending through the embankment); loading, hauling, stockpiling, placing, moisture conditioning, and compacting embankment fill to establish inlet piping subgrade; furnishing, loading, hauling, stockpiling, and placing bedding and embedment materials (provided by the contractor) for the HDPE inlet piping; furnishing, loading, hauling storing, laying, and joining HDPE inlet piping extensions; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting embankment fill materials; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting crushed stone roadway material; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install HDPE inlet piping extensions in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

S. Item 19 – FGD-B to Pumps Pipeline Through Embankment (two pipes):

1. Measurement for FGD-B to Pumps Pipeline Through Embankment shall be by lump sum. Payment for FGD-B to Pumps Pipeline Through Embankment shall include, but not be limited to, all costs necessary to furnish and install 18-inch HDPE piping 12-inch HDPE drain piping, valves, fittings, and appurtenances, including providing horizontal and vertical control for 18-inch HDPE piping and 12-inch HDPE piping; clearing and grubbing, stripping and stockpiling topsoil, excavating and stockpiling protective cover, cutting and temporarily removing existing HDPE geomembrane liner, excavating and stockpiling clay liner, and excavating and stockpiling embankment fill material as required to install 18-inch HDPE piping and 12-inch HDPE drain piping; excavating, stockpiling, and filling as required to install 18-inch HDPE piping and 12-inch HDPE drain piping to the lines and elevations shown on the Drawings; furnishing, loading, hauling, stockpiling, and placing bedding and embedment materials (provided by the contractor) for 18-inch HDPE piping and 12-inch HDPE drain piping; laying and joining 18-inch HDPE piping, 12-inch HDPE drain piping, valves, and fittings, including boots/penetrations, as indicated in the Drawings and Specifications; furnishing, fitting, and installing 12-inch and 18-inch knife gate valves; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting backfill materials for 18-inch HDPE piping and 12-inch HDPE drain piping; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting excavated clay (or general fill and installing geosynthetic clay liner as approved by Owner's Representative) on the upstream embankment slope; deploying, repairing, and seaming geomembrane liner; loading, hauling, placing, moisture conditioning, and compacting protective cover material stockpiled during excavation; replacing stripped topsoil, revegetating, and placing erosion control mat on the downstream embankment slope; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting crushed stone roadway material; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch HDPE crossover piping and 12-inch HDPE drain piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

T. Item 20 – FGD-B to Pump Intake:

1. Measurement for FGD-B to Pump Intake shall be by lump sum. Payment for FGD-B to Pump Intake shall include, but not be limited to, all costs necessary to furnish and install 18-inch HDPE intake riser, fittings, boots/penetrations, and appurtenances, including providing horizontal and vertical control for 18-inch HDPE intake riser; procuring, delivering, unloading, storing, transporting, deploying, and installing geotextile; furnishing, laying, and joining 18-inch HDPE intake riser to the lines and elevations shown on the Drawings; loading, hauling, and placing protective cover to the lines and elevations shown on the Drawings; preparing subgrade; furnishing, erecting, and stripping concrete forms; furnishing, placing, finishing, and curing concrete as indicated in the Drawings; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch HDPE intake riser and concrete collar in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

U. Item 21 – FGD-B Drain Line

1. Measurement for FGD-B Drain Line shall be by lump sum. Payment for FGD-B Drain Line shall include, but not be limited to, all costs necessary to furnish and install 24-inch perforated HDPE piping, 12-inch HDPE piping, fittings, and appurtenances, including providing horizontal and vertical control for 24-inch perforated HDPE piping and riser and 12-inch HDPE piping; filling and grading as required to install 24-inch perforated HDPE piping and riser and 12-inch HDPE piping; furnishing, laying, and joining 24-inch perforated HDPE piping and riser and 12-inch HDPE piping to the lines and elevations shown in the Drawings; procuring, delivering, unloading, storing, transporting, deploying, and installing geotextile and geomembrane rub-sheet; furnishing, loading, hauling, stockpiling, and placing washed gravel embedment; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 24-inch perforated HDPE piping and riser and 12-inch HDPE piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

V. Item 22 –FGD-B to Pump Pipeline (Run of Pipe):

1. Measurement for FGD-B to Pump Pipeline (Run of Pipe) shall be by lump sum. Payment for FGD-B to Pump Pipeline (Run of Pipe) shall include, but not be limited to, all costs necessary to furnish and install 18-inch HDPE piping, fittings, valves and appurtenances, including providing horizontal and vertical control for 18-inch HDPE piping; clearing and grubbing; filling and grading as required to remove localized high and low spots before installing 18-inch HDPE piping; furnishing, laying, and joining 18-inch HDPE piping to the lines and elevations shown in the Drawings; constructing earthen berm pipe restraints; furnishing, laying, and installing cleanouts and air release valve; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to install 18-inch HDPE piping in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

W. Item 23 –Earthen Containment Berm (FGD-B to Pump Pipeline):

1. Measurement for Earthen Containment Berm (FGD-B to Pump Pipeline) shall be by lump sum. Payment for Earthen Containment Berm (FGD-B to Pump Pipeline) shall include, but not be limited to, all costs necessary to construct the approximately 1,100-foot-long earthen containment berm and furnish and install 24-inch HDPE culvert, canal gate valve, fittings, and appurtenances, including providing horizontal and vertical control for earthen berm and 24-inch HDPE culvert to the lines and grades shown in the Drawings; clearing and grubbing; stripping and stockpiling topsoil; furnishing, loading, hauling stockpiling, and placing bedding and embedment materials for 24-inch HDPE culvert; furnishing, laying, and joining 24-inch HDPE culvert; furnishing and installing canal gate valve and metal flared end; furnishing,

loading, hauling, stockpiling, placing, moisture conditioning, and compacting embankment materials; furnishing, loading, hauling, stockpiling, placing, moisture conditioning, and compacting crushed rock fill; loading, hauling, and placing stripped topsoil; revegetating; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to construct earthen containment berm and install 24-inch HDPE culvert in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative. Water will not be measured and paid for separately but shall be included in the Work.

X. Item 24 – Reclaim/Recycle Pump Structure Piping Modifications

1. Measurement for Reclaim/Recycle Pump Structure Piping Modifications shall be by lump sum. Payment for Reclaim/Recycle Pump Structure Piping Modifications shall include, but not be limited to, all costs necessary to furnish and install 14-inch knife gate valve, carbon steel pipe, small diameter valves, fittings, flanges, heat tracing, and appurtenances, including providing horizontal and vertical control for Reclaim/Recycle Pump Structure Piping Modifications; cutting and removing steel flange and small diameter outlets from the FGD-A to Pump Pipeline; furnishing, fitting, and installing 14-inch carbon steel flange and 14-inch knife gate valve; furnishing, fitting, and installing replacement small diameter outlets; furnishing, fitting, and installing carbon steel flanges, 90-degree elbow, reducer, and miscellaneous piping to connect the FGD-B to Pump Pipeline into the Reclaim/Recycle Pump Structure to the lines and elevations shown in the Drawings; disposing of waste; and providing all labor, materials, quality control, equipment, and incidentals to complete Reclaim/Recycle Pump Structure Piping Modifications in accordance with the Drawings and Specifications and to the satisfaction of the Owner's Representative.

*** END OF SECTION ***

**DIVISION 31**

# Earthwork

# SECTION 31 23 00
# EARTHWORK

## 1.0 GENERAL

### 1.1 Description

A. This Section describes the requirements for site preparation, excavation, selective stockpiling of soils, placement, and compaction of earthen materials, including related work such as trenching and shoring, and other items incidental to the Work wherever such are requested by the Owner's Representative.

B. The Contractor shall furnish all labor, tools, materials, equipment, and supervision as may be required to complete the Work.

C. All excavations and shoring shall comply with the requirements of applicable federal and state excavation safety standards.

D. The Work shall be done in strict accordance with these Specifications and as indicated in the Bid documents and on the Drawings.

### 1.2 Related Sections

A. Section 33 05 33 – Polyethylene Pipe and Culverts

### 1.3 References

A. ASTM International (ASTM) (latest version):

1. ASTM D698 – Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft$^3$ (600 kN-m/m$^3$)).
2. ASTM D2487 – Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).
3. ASTM D4318 – Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
4. ASTM D6913 – Standard Test Methods for Particle-Size Distribution (Gradation) of Soils Using Sieve Analysis.
5. ASTM D6938 – Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

### 1.4 Submittals

A. The Contractor shall submit an earthworks operation plan and schedule. The submittal shall include a description of the equipment and quality control procedures to be used, including lift thickness control. This plan shall be approved by the Owner's Representative prior to Contractor mobilization.

B. The Contractor shall submit material data for imported earthen materials for review by the Owner's Representative prior to delivery.

C. The Contractor shall submit copies of all quality control test results to the Owner's Representative daily, including field and laboratory test results.

### 1.5 Tolerances

A. Grading limits and the design surface are defined by the lines and elevations shown on the Drawings or as determined by the Owner's Representative.

B. The Contractor shall maintain uniform gradients between adjacent elevations shown on the Drawings.

C. The tolerances for construction, unless otherwise approved by the Owner's Representative, shall be as required for proper functioning of the constructed Work, and as follows:

1. Slopes:

   Line:± 0.2 feet

   Grade:± 0.1 feet

2. Floors:

   Line:± 0.2 feet

D. Grade:± 0.1 feet

## 1.6 Quality Assurance

A. All Work shall be constructed, monitored, and tested in accordance with the requirements set forth in the Drawings and Specifications and as set forth by the Owner's Representative. The quality of the Work shall be controlled through the use of the Contractor's quality control procedures.

B. The Contractor shall be aware of all testing activities and shall account for these activities in the construction schedule.

C. All quality control testing required by the Contractor's quality control procedures (both field and laboratory testing) will be the responsibility of the Contractor. Quality assurance testing will be conducted by the Owner's Representative. The Contractor shall be responsible for cooperating with the Owner's Representative during all sampling and testing activities. The Contractor shall provide equipment and labor to perform sampling and shall also provide access to all areas that require sampling or testing.

D. All excavation, backfill, and grading operations shall be made available to the observation and testing of the Owner's Representative.

E. Any Work found to be unsatisfactory or any Work disturbed by subsequent operations before acceptance is granted shall be corrected by the Contractor as directed by the Owner's Representative at no additional cost to the Owner.

## 1.7 Protection

A. Shoring shall be furnished and installed as necessary to protect workers, banks, structures, and utilities during construction of foundations, structures, culverts, piping, and manholes. Shoring and bracing shall be removed as excavations are stabilized to the final configuration. Shoring shall be in conformance with all applicable federal, state, and local regulations.

B. The Contractor shall provide and maintain silt fences or other means to prevent sediment generated in excavations, fills, and cleared areas from entering downstream waters. Stockpiling of materials within downstream drainages is not allowed. Silt Fences should be inspected daily and repaired at Contractor's expense if damaged.

C. The Contractor shall call the "one-call" utility location service prior to excavation and shall coordinate directly with the Owner and local utility companies to provide protection and/or relocation of all utilities as required to complete the Work.

D. The Contractor is responsible for locating and protecting existing underground and overhead utilities. Existing underground utilities shall be located by vacuum excavation or another method approved in writing by the Owner in a sufficient number of locations to field verify the routing of underground utilities within the limits of excavation.

## 2.0 PRODUCTS

### 2.1 Materials

A. Materials used in conjunction with this Work shall be furnished and installed by the Contractor unless noted otherwise. Materials shall be free of organics and other deleterious materials. Use of crushed concrete is not permitted.

B. General Fill shall consist of soils obtained from an existing stockpile located SW of the FGD-C Pond as shown on the Drawings.

C. Embankment Fill shall consist of soils excavated as part of the work as approved by the Owner's Representative. If excavated soils are deemed unsuitable (i.e., contain organics or contaminants) or not of sufficient quantity, embankment fill shall consist of material obtained from the existing stockpile located SW of the FGD-C pond or imported earthen materials approved by the Owner's Representative.

D. Topsoil – material stripped within the working area and deemed suitable for use as topsoil by the Owner's Representative.

E. Pipe Bedding and Embedment shall consist of on-site or imported earthen material classifying under ASTM D2487 as well-graded sand (SW or SW-SM) or well-graded gravel (GW or GW-GM) or as otherwise approved in writing by the Owner's Representative. Pipe Bedding shall contain no particles larger than 0.5 inches, and be free from roots, debris, or any other substance that would harm the pipe or might impair the performance of the materials as bedding or embedment for the pipe. Final material selection shall be approved by the Owner's Representative.

F. Selection and placement of earthen materials shall be the responsibility of the Contractor. The Contractor shall be familiar with the materials classified in these Specifications and shall obtain aggregate materials meeting all pertinent requirements unless otherwise approved in writing by the Owner's Representative. The Owner's Representative reserves the right to approve all material selection and stockpiling.

## 3.0 EXECUTION

### 3.1 Clearing and Grubbing

A. If required, clearing shall be done within the footprint of the limits of the construction area, as delineated on the Drawings, or as otherwise described in the Specifications. Clearing shall extend a maximum of fifteen (15) feet and a minimum of ten (10) feet outside of the construction limits or as directed by the Owner's Representative.

B. No clearing shall be performed until written permission is given by the Owner's Representative and until Contractor has provided construction staking for the proposed Work.

C. Contractor shall strip all vegetative matter, rubbish, roots in excess of one (1) inch in diameter and other deleterious materials from the designated areas. In no case shall unsuitable deleterious materials, as determined by the Owner's Representative, be incorporated in the fill materials within limits of the Work.

D. In areas designated to be stripped of unsuitable or objectionable materials, said materials shall be stripped to the full depth of organic or other unsuitable material as determined by the Owner's Representative.

E. Stripped and grubbed vegetation shall be removed and uniformly spread in an area designated by Owner's Representative in accordance with permits obtained from the appropriate local, state, and federal regulatory agencies. All areas shown as part of the Work shall be cleared and grubbed, unless otherwise directed by Owner's Representative.

## 3.2 Strip and Stockpile Topsoil

A. Stripping of topsoil shall be done on the embankment slopes to be excavated where topsoil is present, or as directed by Owner's Representative.

B. Topsoil shall be excavated and removed in a manner that will minimize contact with other soil horizons. Such measures as are necessary shall be taken to ensure that the removal of topsoil does not result in erosion or excessive sedimentation.

C. If required, removed topsoil shall be stockpiled at locations designated by Owner's Representative. Stored topsoil shall not be disturbed by construction or on-site activities, and shall be protected from wind and water erosion, unnecessary compaction and contamination that would lessen the capability of the material to support vegetation when redistributed.

D. Topsoil stockpiles shall be graded to minimize erosion and prevent ponding of precipitation in the stockpile areas.

E. Stockpiled topsoil shall not be moved until required for redistribution on a regraded area.

## 3.3 Excavation

A. Excavation shall be performed to the lines and grades indicated in the Drawings or as otherwise approved by the Owner's Representative. No excavation shall begin until the Contractor's Surveyor has provided construction staking for the Work. During excavation, grades shall be maintained to provide drainage of any surface waters that may impact the Work. The final excavated surface shall be free of loose materials, clods, rock, and other debris, including grade stakes and hubs. The upper twelve (12) inches of subgrade shall be compacted to achieve a firm and unyielding surface to the satisfaction of the Owner's Representative.

B. Excavated soil materials may be used as fill material if they can be demonstrated to meet the requirements of these Specifications, as determined by the Owner's Representative based on material data furnished by the Contractor, or are otherwise approved for such use by the Owner's Representative. The Owner's Representative will visually observe out-of-specification excavated materials and designate them for stockpiling or disposal. The Contractor shall place excavated materials designated for stockpiling in an on-site stockpile at a location determined by the Owner. The Contractor shall dispose excavated soils designated for disposal legally off site.

C. Excavations shall be graded and properly maintained to provide adequate drainage at all times. The Work shall be suspended by the Contractor when, in the opinion of the Owner's Representative, the site is overly wet or muddy or otherwise unsuitable for proper maintenance until directed otherwise by the Owner's Representative.

D. Where the required lines, levels, and grades are not otherwise defined, the Contractor shall excavate as necessary to accommodate the items that are to be placed in the excavations and as necessary to provide working space to install and inspect those items. In such cases, the Contractor shall excavate to establish safe side slopes or sheet, brace, and shore the sides of the excavations as needed.

E. All necessary precautions shall be taken to preserve the material below and beyond the lines of excavation in the soundest possible condition. Where required to complete the Work, all excess excavation or over-excavation shall be backfilled with acceptable materials that have been placed and

compacted in accordance with the Specifications and to the satisfaction of the Owner's Representative.

F. Safe temporary construction slopes shall be the responsibility of the Contractor. The Contractor shall inspect all temporary and permanent open-cut excavations on a regular basis for signs of instability. Should signs of instability be noted, the Contractor shall immediately undertake remedial measures and shall notify the Owner's Representative immediately. Permanent cut slopes shall be left in a smooth, safe, and stable condition at the end of each workday.

## 3.4 Stockpile Construction

A. Stockpiles may be constructed as approved by the Owner's Representative in areas designated by the Owner.

B. Watering shall be performed during stockpiling to control dust to the satisfaction of the Owner's Representative.

## 3.5 Prepared Subgrade

A. Subgrade shall be prepared to the lines and grades shown on the Drawings and shall be compacted using equipment approved by the Owner's Representative.

B. The subgrade shall not contain saturated or other deleterious materials as determined by the Owner's Representative.

C. The Contractor shall protect prepared subgrade from disturbance due to weather, construction equipment, and other factors. Subgrade surfaces, including previously approved subgrade, that become softened or otherwise unsuitable shall be repaired to conform to these Specifications and to the satisfaction of the Owner's Representative. Subgrade found to exhibit swelling, heaving, or other similar conditions shall be replaced or reworked by the Contractor to remove such defects at no additional cost to the Owner.

## 3.6 Fill and Compaction

A. The following general guidelines shall be adhered to for all types of fill except as noted elsewhere in this section.

B. Fill shall be placed to achieve the lines and grades shown on the Drawings.

C. No fill materials shall be placed until the subgrade preparations, pipe bedding placement, and pipe installation have been completed and approved by the Owner's Representative.

D. Prior to placement of a lift of fill, the Contractor must have received positive results of field quality assurance testing or observation for the previous lift to verify compliance with these Specifications. The Contractor shall not place a new lift of fill over a preceding lift until approval is given by the Owner's Representative. If the Contractor fails to comply with this requirement, the Contractor may be required to remove and replace Work that has not been approved at the Contractor's expense.

E. The suitability of all materials intended for use in the fill shall be subject to approval by the Owner's Representative. No brush, roots, sod, ice, snow, frozen soil, or other deleterious or unsuitable materials shall be incorporated in the fills. Fill placement shall be temporarily stopped by the Contractor in unsuitable weather conditions that could cause materials or installation to fail to meet the Specifications, in the opinion of the Owner's Representative. The distribution of materials shall be such that the fill is free from voids, lenses, pockets, streaks, and layers of materials differing substantially in texture or gradation from the surrounding material.

F. If the surface of the prepared subgrade or the surface of any layer of the fill is too dry or too smooth to bond properly with the layer of material to be placed thereon, it shall be moisture conditioned and/or worked with a harrow, scarifier, disk, or other suitable equipment to provide a satisfactory bonding surface before fill material is placed thereon. If the surface of the prepared subgrade or rolled surface of any layer is excessively wet for fill materials to be placed thereon, the surficial material shall be removed and allowed to dry or worked with a harrow, scarifier, disk, or other suitable equipment to reduce the moisture content to an acceptable level, as determined by the Owner's Representative. It shall then be compacted in accordance with these Specifications before the next layer of fill material is placed. Determination of such wet or dry conditions shall be made by the Owner's Representative. Subgrade surfaces, including previously approved subgrade, that become softened or otherwise unsuitable shall be repaired to the satisfaction of the Owner's Representative.

G. Earthen fill materials shall be compacted at moisture contents such that the required degree of compaction and strength can be achieved. If the moisture content of the fill is outside of the acceptable range, the soil shall be wetted or dried back as appropriate. Wetting shall be accomplished using a water truck and spray nozzle unless the Owner's Representative approves an alternative method. During wetting or drying, the soil shall be regularly disked or otherwise mixed so that uniform moisture conditions are achieved.

H. The Contractor may moisture condition backfill either in the stockpile area or in the fill area, or both. Any delays in progress shall be the responsibility of the Contractor.

I. Each lift of fill placed against a sloping earth surface shall be keyed into the slope by excavating a bench into the slope. The width of the bench shall be greater than or equal to the height of the lift. Keying of lifts is not required against rock slopes.

J. Compaction shall be accomplished with equipment and by methods approved by the Owner's Representative. If such equipment or methods are found unsatisfactory for the intended use, the Contractor shall replace the unsatisfactory equipment with other types or adjust methods until proper compaction can be achieved. After each layer of fill material has been placed, spread, and moisture conditioned, the layer shall be compacted by passing compaction equipment over the entire surface of the layer a sufficient number of times to obtain the required density, as specified herein.

K. If testing by the Contractor or the Owner's Representative indicates that the Work does not meet the requirements of these Specifications, the Owner's Representative will establish the extent of the non-conforming area. The non-conforming area will be reworked by the Contractor until acceptable test results are achieved.

L. A method specification for compaction may be implemented with the approval of the Owner's Representative for specific material type(s). The method specification will be dependent upon the material characteristics, the Contractor's equipment, and the field conditions. At a minimum, the method specification will be to uniformly compact the soil with a minimum of two passes per lift with compaction equipment approved by the Owner's Representative.

M. The Contractor shall not place frozen fill, nor shall fill be placed on frozen ground.

N. The Contractor shall remove and replace or recompact natural subgrade or previously placed fill that has been softened by frost, flooding, or other weather effects. Fill shall not be placed over such corrected areas until the required surface preparation has been completed and approved by the Owner's Representative.

O. General Fill

1. General Fill shall be obtained from a soil stockpile located near the SW of FGD-C
2. General Fill shall be placed in loose lifts not exceeding ten (10) inches in thickness. Subgrade materials shall be re-worked and compacted to the requirements as outlined in the Specifications.

3. General Fill material shall be moisture conditioned as required to achieve a moisture content of -1 to +3 percent relative to the standard Proctor (ASTM D698) optimum moisture content. General Fill material shall be compacted to a minimum of 95% of the maximum dry density as determined by the standard Proctor compaction test. Final lines shall be approved by Owner's Representative.

P. Embankment Fill

1. Embankment Fill shall be placed in horizontal loose lifts not exceeding ten (10) inches in thickness. Subgrade materials shall be re-worked and compacted to the requirements as outlined in the Specifications.
2. Embankment Fill material shall be approved by Owner's Representative.
3. Embankment Fill material shall be moisture conditioned as required to achieve a moisture content of -1 to +3 percent relative to the standard Proctor (ASTM D698) optimum moisture content. Embankment Fill material shall be compacted to a minimum of 95% of the maximum dry density as determined by the standard Proctor compaction test. Final lines shall be approved by OWNER'S REPRESENTATIVE.

Q. Topsoil

1. Topsoil shall be placed in horizontal loose lifts not exceeding six (6) inches in thickness.
2. Topsoil material shall be placed to the final lines and grades and shall be approved by the Owner's Representative.
3. Topsoil material shall be material that was stripped and stockpiled by the CONTRACTOR, or as otherwise directed by Owner's Representative.

R. Pipe Bedding and Embedment

1. Pipe Bedding/Embedment shall be granular material approved by the OWNER'S REPRESENTATIVE.
2. Pipe Bedding shall be placed in a horizontal loose lift with a minimum thickness of three (3) inches, or as approved by OWNER'S REPRESENTATIVE. Pipe Embedment shall be placed around the pipe.
3. Pipe embedment shall be placed in uniform horizontal loose lifts not to exceed six (6) inches in thickness to a minimum of 12 inches above the top of the pipe(s) being backfilled, or as approved by OWNER'S REPRESENTATIVE. Pipe Embedment shall be placed around the pipe.
4. Pipe embedment shall be placed in uniform horizontal loose lifts not to exceed 6 inches in thickness to a minimum of 12 inches above the top of the pipe(s) being backfilled
5. Pipe Bedding/Embedment shall be moisture conditioned as approved by OWNER'S REPRESENTATIVE and placed loosely to provide adequate pipe support. Compaction of Pipe Embedment may be accomplished using hand and/or remote compaction equipment as approved by OWNER'S REPRESENTATIVE.
6. Heavy compaction equipment shall not be used over the top of the pipe unless at least eighteen (18) inches of fill material has been placed over the top of the pipeline and as approved by the OWNER'S REPRESENTATIVE.

## 3.7 Field Quality Control and Quality Assurance

A. The Contractor is responsible for quality control during all phases of earthworks construction, including verification of quantities.

B. The Owner's Representative will conduct quality assurance testing to verify that the Contractor is performing the Work in accordance with the Specifications and Drawings. The Contractor shall allow the Owner's Representative access to all phases of the Work to carry out the required testing and observations. The Contractor shall coordinate with the Owner's Representative on testing logistics, locations, and timing. The Owner's Representative may require temporary suspension of an earthworks operation in order to collect samples and/or conduct testing. In addition, the Contractor shall provide assistance in sampling or testing, including use of the Contractor's equipment, upon request from the Owner's Representative

1. The Owner's Representative will perform moisture content and density testing and monitoring of lift thickness in the field in accordance with the requirements set forth in the Specifications.
2. If testing by the Contractor or the Owner's Representative indicates that the Work does not meet the requirements of these Specifications, the Owner's Representative will establish the extent of the non-conforming area. The non-conforming area will be reworked by the Contractor at no additional cost to the Owner until acceptable test results are obtained.
3. The Contractor shall be aware of all field quality assurance testing activities, as these may affect the schedule, and shall comply with the requirements of the Specifications.
4. General Fill and Embankment Fill material testing will be conducted by the Owner's Representative in accordance with Table 310000-1.

**Table 310000-1: General Fill & Embankment Fill Testing Requirements**

| Material | Parameter | Test Method | QA Test Frequency |
|---|---|---|---|
| General Fill and Embankment Fill | In-situ Density/Moisture Nuclear Gauge | ASTM D6938 or equivalent | 1 per material type or 1 per 500 cy or |
| | Standard Proctor Curve | ASTM D698 | 1 per material type or 1 per 5,000 cy |
| | Sieve Analysis | ASTM D6913 or equivalent | 1 per material type or 1 per 5,000 cy |
| | Atterberg Limits | ASTM D4318 | 1 per material type or 1 per 5,000 cy |

## 3.8 Protection of Work

A. The Contractor shall use all means necessary to protect materials and partially completed and completed Work.

B. In the event of damage, the Owner's Representative will identify areas requiring repair and the Contractor shall make all repairs and replacements necessary to the approval of the Owner's Representative at no additional cost to the Owner.

C. At the end of each workday, the Contractor shall verify that the entire Work area was left in a state that promotes surface drainage off of and away from the area and from finished Work.

## 3.9 Seeding and Vegetation

A. The Contractor shall revegetate all areas disturbed by operations. All areas disturbed or not having sufficient vegetation shall be revegetated to prevent erosion.

B. The Contractor shall select the seeding mixture, application rate and mulching requirements.

C. Contractor shall provide 2-year warranty on all permanent seeding. If after 2-year period a mature stand of grass vegetation is not established to the satisfaction of the Owner, the Contractor shall be responsible for placement of additional topsoil, fertilizing, seeding, and mulching as necessary. The Contractor shall provide a 1-year warranty on all repaired vegetation areas.

## 3.10 Survey Control

A. The Contractor is responsible for construction surveying and survey control.

***END OF SECTION***

# SECTION 31 35 26A
# COMPACTED CLAY LINER

## 1.0 GENERAL

### 1.1 Description

A. This Section describes the requirements for site preparation, excavation, disposal, scarification and recompaction of the clay liner, including other items incidental to the Work wherever such are requested by the Owner's Representative.

B. The work consists of removing the approximately 1 foot of clay from the existing liner system in FGD-A Pond and scarifying and recompacting the upper 6 inches of the remaining Clay Liner. As required, the work may also include placement of Clay Liner to meet the thickness requirement, and/or removal and recompaction of existing Clay Liner to meet the hydraulic conductivity specification.

C. The Contractor shall furnish all labor, tools, materials, equipment, and supervision as may be required to complete the Work.

D. The Work shall be done in strict accordance with these Specifications and as indicated in the Bid documents and on the Drawings.

### 1.2 Related Sections

A. Section 31 23000A – Earthwork

B. Section 31 05 19.16 -- Textured HDPE Geomembrane Liner

C. Section 31 05 19.23 -- Geosynthetic Clay Liner

### 1.3 References

A. Liner Quality Control Plan

B. ASTM International (ASTM) (latest version):

1. ASTM D698 – Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).
2. ASTM D1140, Standard Test Method for Amount of Material in Soils Finer than the No. 200 (75-mm) Sieve
3. ASTM D1587, Standard Practice for Thin-Walled Tube Sampling of Soils.
4. ASTM D2216, Standard Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
5. ASTM D2487 – Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).
6. ASTM D4318 – Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
7. ASTM D5084, Standard Test Method for Measurement of Hydraulic Conductivity of Saturated Porous Materials Using a Flexible Wall Permeameter

8. ASTM D6938 – Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

## 1.4 Submittals

A. The Contractor shall submit an operations plan and schedule. The submittal shall include a description of the equipment and quality control procedures to be used, including lift thickness control. This plan shall be approved by the Owner's Representative prior to Contractor mobilization.

B. The Contractor shall submit copies of all quality control test results to the Owner's Representative daily, including field and laboratory test results.

## 1.5 Tolerances

A. Grading limits and the design surface are defined by the lines and elevations shown on the Drawings or as determined by the Owner's Representative.

B. A minimum 2.0-foot layer of Clay Liner must be in place. The thickness of the Clay Liner will be based on comparing the subgrade elevations shown on the Drawings to the surveyed elevation of the top of the recompacted Clay Liner surface.

C. The tolerances for construction, unless otherwise approved by the Owner's Representative, shall be as required for proper functioning of the constructed Work, and as follows:

1. Slopes:

   Line:= 0.2 feet

   Grade:+ 0.1 feet

2. Floors:

   Line:± 0.2 feet

   Grade:+ 0.1 feet

## 1.6 Quality Assurance

A. All Work shall be constructed, monitored, and tested in accordance with the requirements set forth in the Liner Quality Control Plan, Drawings and Specifications and as set forth by the Owner's Representative. The quality of the Work shall be controlled through the use of the Contractor's quality control procedures.

B. The Contractor shall be aware of all testing activities and shall account for these activities in the construction schedule.

1. The proposed minimum testing frequencies for Construction Quality Assurance (CQA) are presented in Tables 313526A-1. Actual test frequencies may vary. CQA testing, or lack thereof, does not relieve the Contractor from its responsibility to complete the Work in accordance with the Specifications.

2. Sampling locations shall be selected by the Owner's Representative. If necessary, the location of routine in-place moisture content and dry unit weight tests shall be determined using a non-biased sampling plan.

3. Undisturbed recompacted clay material samples for laboratory hydraulic conductivity testing shall be taken in accordance with ASTM D1587 with the assistance of the Contractor such that the sample tube is inserted vertically into the compacted clay with a continuous smooth stroke from the construction equipment used to advance the sampler.

4. Additional testing may be performed at the Owner's Representative's discretion.

C. All quality control testing required by the Contractor's quality control procedures (both field and laboratory testing) will be the responsibility of the Contractor. Quality assurance testing will be conducted by the Owner's Representative. The Contractor shall be responsible for cooperating with the Owner's Representative during all sampling and testing activities. The Contractor shall provide equipment and labor to perform sampling and shall also provide access to all areas that require sampling or testing.

D. All excavation, backfill, and grading operations shall be made available to the observation and testing of the Owner's Representative.

E. If a defective area is discovered in the Compacted Clay, the Owner's Representative shall determine the extent and nature of the defect. If the defect is indicated by an unsatisfactory test result, the Owner's Representative shall determine the extent of the defective area by additional tests, observations, a review of records, or other means that the Owner's Representative deems appropriate.

F. After determining the extent and nature of a defect, the Owner's Representative shall notify the Contractor and schedule appropriate retests when the defective work has been corrected.

G. The Contractor shall correct defective work to the satisfaction of the Owner's Representative. The cost of corrective actions shall be borne by the Contractor.

H. All retests recommended by the Owner's Representative must verify that the defect has been corrected before any additional work is performed by the Contractor in the area of the deficiency.

## 2.0 PRODUCTS

### 2.1 Material

A. The Clay Liner shall consist of material currently in place as part of an existing nominal 3-foot thick clay liner or other on-site material as approved by the Owner. Pre-construction testing data are included in the Liner Quality Control Plan.

## 3.0 EXECUTION

### 3.1 Familiarization

A. Prior to implementing any work of this Section, the Contractor shall become thoroughly familiar with the site, the site conditions, and all portions of the work falling within this Section and the Liner Quality Control Plan (LQCP).

B. Inspection:

1. Prior to implementing any work of this Section, the Contractor shall carefully inspect the installed work of all other Sections and verify that all such work is complete to the point where the installation of this Section may properly commence without adverse impact.

2. If the Contractor has any concerns regarding the installed work of other Sections or the site, the Contractor shall notify the Owner's Representative in writing within 48 hours of the site visit. Failure to notify the Owner's Representative prior to installation of the Compacted Clay will be construed as Contractor's acceptance of the related work of all other Sections.

3. The Contractor shall verify that the as-built subgrade has been surveyed to sufficient accuracy and with sufficient frequency as required by the LQCP prior to placement of any Compacted Clay liner material.

## 3.2 Excavation of Existing Compacted Clay Liner

A. Following removal of CCR, the Contractor shall survey the Clay Liner surface and compare it to the As-Constructed Clay Plan in the Drawings.

B. The Contractor shall remove the existing Clay Liner to the elevations shown on the Top of Excavated Clay Grading Plan in the Drawings.

C. Excavated Clay Liner will be hauled to Ash Landfill 1 for disposal. The exact location of the material placement will be verified by the Owner during the pre-bid meeting.

D. Care shall be taken to prevent damage to the lower portion of the existing Clay Liner.

E. The Owner's Representative will collect thin-walled tube samples of the lower 1.5 feet of the existing Clay Liner for hydraulic conductivity testing at the frequency indicated in Table 313526A-1.

F. In the event a sample collected from the lower 1.5 feet of existing Clay Liner fails to meet the hydraulic conductivity specification, the backup sample will be tested. If the backup sample does not meet the project specification, the failing area will be delineated and the existing Clay Liner in the failing area shall either be removed and replaced in accordance with the specifications or covered with an approved geosynthetic clay liner (GCL). GCL to be installed in accordance with the specifications.

G. The upper 6 inches of the remaining Clay Liner will be scarified and moisture conditioned (if necessary).

H. The scarified Clay Liner shall be thoroughly remolded and compacted using a padfoot roller to the required minimum dry unit weight, (not less than 95 percent of the maximum dry density (ASTM D698)), within the acceptable range of water contents (not less than 0 percent nor greater than 6 percent above optimum (ASTM D698)), as approved by the Owner's Representative.

I. Compaction will be performed with an appropriately heavy, properly ballasted, penetrating-foot compactor (such as a CAT 815 or equivalent) subject to approval from the Owner's Representative. A minimum of 4 passes will be required on each area of each lift to remold the clay regardless of whether the lift meets compaction specifications. A pass being defined as two applications of the compacting roller (i.e., for a 1 roller compactor, a pass is a trip forward and back; for a 2 roller compactor, a pass is a trip forward). A pass, for a CAT 815, is one trip across the liner.

J. The daily work area will extend a distance no greater than necessary to maintain moist soil conditions and continuous operations. Desiccation and crusting of the lift surface will be avoided as much as possible.

K. If desiccation and crusting of the lift surface occurs before placement of the geomembrane, this area will be sprinkled with water and then scarified and tested for water content to ensure uniform moisture before placing the geomembrane.

L. Hand compaction at the proper moisture content shall be used in all locations around penetrations, corners, appurtenances, etc., to achieve the specified dry unit weight and moisture content. A tamping-foot type compactor having a foot pressure of at least 250 pounds per square inch (psi) shall be used. Care shall be taken to protect piping, geomembranes and other structures. Damage to any materials or work shall be repaired by the Contractor at no additional cost to the Owner.

M. Additional thin-walled tube samples will be collected of the upper 6 inches of recompacted Clay Liner by the Owner's Representative for hydraulic conductivity testing at the frequency indicated in Table 313526A-1.

N. The same material and compaction methods as outlined in this Section shall be used to replace unacceptable zones detected by the Owner's Representative.

O. The Compacted Clay Liner surface shall be made smooth and free from ruts or indentations at the end of every working day when precipitation is forecast and/or at the completion of the compaction operations in that area.

P. The Contractor shall finish each day's work with a smooth roller to create a smooth surface which will promote surface-water runoff and minimize moisture penetration.

Q. The entire area shall be left in a manner to promote runoff at the end of each day.

R. After completion of a segment of Compacted Clay Liner, but before installation of the geomembrane liner, the top of the clay will be surveyed to ensure that: (i) the specified thickness of the Compacted Clay Liner has been achieved; (ii) the top of the Compacted Clay Liner slopes across the cell at the grades specified on the Drawings.

S. Any holes in the Compacted Clay Liner resulting from soil testing, sample procurement, grade stakes, or other activities shall be backfilled with bentonite or a bentonite-rich soil material. This backfill will be tamped in the hole to remove pockets of air or loose soil, and to assure a tight compact seal.

T. Ponded water on constructed Compacted Clay Liner should be removed in a timely manner.

U. For Compacted Clay Liner which will be overlain with a geomembrane, the Compacted Clay Liner shall be smooth-drum rolled in preparation for geomembrane placement.

V. Compacted Clay Liner construction will be conducted in a systematic and timely fashion.

W. In the event of a non-conforming or failing test the Contractor shall follow procedures described in the LQCP.

## 3.3 Product Protection

A. The Contractor shall use all means necessary to protect all prior work, including all materials and completed work of other Sections.

B. In the event of damage, the Contractor shall immediately make all repairs and replacements necessary for the approval of the Owner's Representative and at no additional cost to Owner.

C. Compacted Clay Liner shall be maintained at or slightly above optimum moisture content until placement of the geomembrane liner. After density and moisture tests indicate Compacted Clay Liner meets specifications, the Compacted Clay Liner shall be smooth-drum rolled and watered as directed by the POR to prevent desiccation cracking.

## 3.4 Field Quality Control and Quality Assurance

A. The Contractor is responsible for quality control during all phases of Compacted Clay Liner construction.

B. The Owner's Representative will conduct quality assurance testing to verify that the Contractor is performing the Work in accordance with the LQCP, Specifications and Drawings. The Contractor shall allow the Owner's Representative access to all phases of the Work to carry out the required testing and observations. The Contractor shall coordinate with the Owner's Representative on testing logistics, locations, and timing. The Owner's Representative may require temporary suspension of operations in order to collect samples and/or conduct testing. In addition, the Contractor shall provide assistance in sampling or testing, including use of the Contractor's equipment, upon request from the Owner's Representative.

1. The Owner's Representative will collect thin-walled tube samples of the existing Compacted Clay Liner (lower 1.5 foot of Clay Liner) prior to scarification of the upper portion of the Compacted Clay Liner.
2. The Owner's Representative will perform moisture content and density testing in the field in accordance with the requirements set forth in the LQCP and Specifications.

3. The Owner's Representative will collect thin-walled tube samples of the recompacted Clay Liner (upper 6-inch layer of Clay Liner).
4. If testing by the Contractor or the Owner's Representative indicates that the Work does not meet the requirements of these Specifications, the Owner's Representative will establish the extent of the non-conforming area. The non-conforming area will be reworked by the Contractor at no additional cost to the Owner until acceptable test results are obtained.
5. The Contractor shall be aware of all field quality assurance testing activities, as these may affect the schedule, and shall comply with the requirements of the Specifications. Areas of Clay Liner cannot be approved for geomembrane installation until passing hydraulic conductivity results are received for the area. Hydraulic conductivity testing of thin-walled samples may take up to 5 days to complete.
6. Compacted Clay Liner testing will be conducted by the Owner's Representative in accordance with Table 313526A-1.

**Table 313526A-1 Clay Liner Testing Requirements**

| Material | Parameter | Test Method | QA Test Frequency |
|---|---|---|---|
| Clay Liner | In-situ Density/Moisture Nuclear Gauge | ASTM D6938, D2937, or D1556 | 1 per 8,000 ft²/upper 6 inches |
| | Sieve Analysis | ASTM D1140 or equivalent | 1 per 40,000 ft²/ upper 6 inches |
| | Atterberg Limits | ASTM D4318 | 1 per 100,000 ft² / lower 1.5 feet |
| | Hydraulic Conductivity | ASTM D5084 | |

A. When sampling for permeability tests, two Shelby tubes/drive cylinders should be retrieved. One tube/cylinder shall serve as the primary test sample. The second tube/cylinder shall serve as the backup sample in case of damage or sample disturbance in the first tube, or in case of a non-conforming permeability test.

B. Care will be taken to reference field density tests to the correct Proctor curve for the material being used in construction.

C. Throughout construction of the Compacted Clay Liner, test results will be reviewed.

D. In the event of a failing permeability test within the lower 1.5 feet of the clay liner, the Owner's Representative will establish the extent of the non-conforming area and the area will be repaired either by removing/recompacting clay or covering the area with a geosynthetic clay liner.

## 3.5 Survey Control

A. The Owner will supply surveying for payment verification, construction certification and CQA only.

B. Thickness verification will be performed by survey methods. At a minimum, the points listed in the Drawings are required. Additional points shall be obtained to define grade breaks, penetration, etc.

6. GRI GM-19 Seam Strength and Related Properties of Thermally Bonded Polyolefin Geomembranes

## 1.4 Submittals

A. Prior to Material Delivery

1. No material shall be delivered to the Site until the material and performance documentation and certifications have been received and reviewed by the Owner or Owner's Representative. Documentation shall include quality control (QC) test results on the manufactured geomembrane sheet and certification stating the geomembrane roll numbers, base resin type, and lot from which it was produced. Each quality control certificate shall include roll identification numbers, testing procedures, and results of quality control tests. The quality control tests shall be performed in the manufacturing plant using the test methods and frequencies listed in the most recent version of the Geosynthetic Research Institute (GRI) test method GM13, "Test Methods, Test Properties and Testing Frequency for High Density Polyethylene (HDPE) Smooth and Textured Geomembranes,"
2. Resumes of the installer's supervisor(s) or Master Seamer(s) shall be obtained to verify that adequate seaming experience will be utilized on the project. The installer's supervisor or Master Seamer shall have had experience totaling a minimum of 2,000,000 square feet of geomembrane installation.
3. Upon delivery of geomembrane, storage and handling procedures shall also be documented. Rolls of geomembrane shall be handled and stored in such a way as not to damage the material.

B. During Installation

1. Quality control documentation shall be recorded during installation.
2. Subgrade surface acceptance certificates signed by Liner Installer for each area that will be covered directly by geomembrane.

# 2.0 PRODUCTS

## 2.1 Geomembrane

A. Polyethylene Resin

1. The polyethylene resin from which the geomembrane is made will generally be in the density range of 0.932 g/ml or higher, and have a melt index value per ASTM D1238 of less than 1.0 g/10 min.

2. The resin shall be virgin material with no more than 10% rework. If rework is used, it must be a similar polyethylene as the parent material.
3. No post-consumer resin (PCR) of any type shall be added to the formulation.

B. Textured High Density Polyethylene (HDPE) Geomembrane Properties

**Table 313526B-1 Textured HDPE Geomembrane Requirements**

| Testing Properties | Testing Method | Test Value | Testing Frequency |
|---|---|---|---|
| Thickness (min ave.)<br>• Lowest individual for 8 of 10 values<br>• Lowest individual for any value | ASTM D5994 | 57 mil<br>54 mil<br>51 mil | Per roll |
| Density g/cc | ASTM D792 | 0.940 mil | 200,000 lb |
| Asperity Height (min ave.) (1) | ASTM D7466 | 16 mil | Every 2nd roll |
| Tensile Properties (min. ave.) (2)<br>• Yield strength – lb/in<br>• Break strength – lb/in<br>• Yield elongation - %<br>Break elongation - % | ASTM D6693 | <br>126<br>90<br>12<br><br>100 | 20,000 lb |
| Tear Resistance – lb (min. ave.) | ASTM D1004 | 42 | 45,000 lb |
| Puncture Resistance – lb (min. ave.) | ASTM D4833 | 90 | 45,000 lb |
| Stress Crack Resistance (3) | ASTM D5397 | 500 hr | Per GRI GM10 |
| Carbon Black Content - % | ASTM D1603(4) | 2.0 to 3.0 | 20,000 lb |
| Carbon Black Dispersion | ASTM D5596 | Note (5) | 45,000 lb |
| Oxidative Induction Time (OIT) (min ave.) (6)<br>• Standard OIT; or<br>• High Pressure OIT | <br>ASTM D3895<br>ASTM D5885 | <br>100 min<br>400 min | 200,000 lb |
| Oven Aging at 85°C (6)(7)<br>• Std. OIT (min. ave.), % retained after 90 days<br>• High Pressure OIT (min. ave.), % retained after 90 days | ASTM D5885<br>ASTM D5721<br><br>ASTM D3895 | <br>55<br><br>80 | Per each formulation |
| UV Resistance (8) | | | |

| | | | |
|---|---|---|---|
| High Pressure OIT (min ave.) % retained after 1600 hrs | ASTM D5885 | 50 | Per each formulation |

(1) Alternate the measurement side for double sided textured sheet
(2) Machine direction (MD) and cross machine direction (XMD) average values should be on the basis of 5 test specimens each direction.
Yield elongation is calculated using a gage length of 1.3 inches
Break elongation is calculated using a gage length of 2.0 inches
(3) SP-NCTL per ASTM D5397 Appendix, is not appropriate for testing geomembranes with textured or irregular rough surfaces. Test should be conducted on smooth edges of textured rolls or on smooth sheets made from
the same formulation as being used for the textured sheet materials.
The yield stress used to calculate the applied load for the SP-NCTL test should be the manufacturer's mean value via MQC testing.
(4) Other methods such as D1603 (tube furnace) or D6370 (TGA) are acceptable if an appropriate correlation to D4218 (muffle furnace) can be established.
(5) Carbon black dispersion (only near spherical agglomerates) for 10 different views:
9 in Categories 1 or 2 and 1 in Category 3
(6) The manufacturer has the option to select either one of the OIT methods listed to evaluate the antioxidant content in the geomembrane.
(7) It is also recommended to evaluate samples at 30 and 60 days to compare with the 90 day response.
(8) The condition of the test should be 20 hr. UV cycle at 75□C followed by 4 hr. condensation at 60°C.
(9) UV resistance is based on percent retained value regardless of the original HP-OIT value.

C. Geomembrane pre-construction QA samples shall be taken by the Owner's Representative from pre-shipped material at the factory or from shipped material on site.

D. The extrudate rod and/or bead shall be made from same type of resin as the geomembrane. Additives shall be thoroughly dispersed, and the material shall be free of contamination by moisture or foreign matter.

## 2.2 Seaming and Testing Equipment

A. Welding

1. Use fusion-welding apparatus that are self-propelled devices equipped with following:
   a. Gauge indicating temperature of heating element.
   b. Gauge indicating the speed of travel
2. Use extrusion welding apparatus equipped with gauges giving temperature of extrudate at nozzle of apparatus or utilize hand-held gauges to measure extrudate temperatures.
3. Place electric generator on smooth base such that no damage occurs to geomembrane.

B. Air Pressure Testing Equipment

1. Air pump (manual or motor driven), equipped with a pressure gauge, capable of generating, sustaining, and measuring pressure between 20 and 35 psi, and mounted on cushion to protect geomembrane.
2. Rubber hose with fittings and connections.
3. Sharp hollow needle, or other approved pressure feed device.
4. Air pressure monitoring device.

C. Vacuum Testing Equipment

1. Vacuum box assembly consisting of: rigid housing, transparent viewing window, soft neoprene gasket attached to bottom of housing, porthole or valve assembly, and vacuum gauge.
2. Pump assembly equipped with pressure controller and pipe connections.
3. Pressure/vacuum rubber hose with fittings and connections.
4. Soapy solution to wet test area.

5. Means of applying soapy solution.

D. Tensiometer Testing Equipment

1. Tensiometer shall be capable of maintaining constant jaw separation rate of 2 inches per minute, and shall be calibrated, with certificate of calibration less than 1 year old kept with tensiometer.

## 3.0 EXECUTION

### 3.1 Preparation

A. Surface Preparation

1. Contractor is responsible for preparing supporting surface for geomembrane placement.
2. After prepared surface has been accepted in accordance with the Liner Quality Control Plan, report to Owner any change in supporting surface condition that may require repair work. Maintain prepared surface.
3. Do not place geomembrane onto an area that has become softened by precipitation or cracked due to desiccation. Observe and report surface condition daily to evaluate degree of softening and desiccation cracking.
4. Repair damage to prepared surface caused by installation activities at Installer's expense.

B. Panel Nomenclature

1. Field panel is defined as a roll or portion of roll cut and seamed in field, excluding patches and cap strips.
2. Identify each field panel with identification code (number or letter-number) consistent with Installer's layout plan. This identification code shall be agreed upon by Owner, Installer, and Owner's Representative.
3. Writing on liner with colored markers shall be as agreed upon in the Pre-Construction Meeting. Only authorized personnel shall be permitted to write on liner.

C. Protection

1. Do not use equipment that damages geomembrane.
2. Ensure prepared surface underlying geomembrane has not deteriorated since previous acceptance and remains acceptable immediately prior to geomembrane deployment.
3. Do not permit personnel to smoke or wear shoes that can damage geomembrane while working on geomembrane. Personnel shall not bring glass bottles on geomembrane.
4. Unroll panels in manner that does not cause excessive scratches or crimps in geomembrane and does not damage supporting soil.
5. Place panels in manner that minimizes wrinkles (especially differential wrinkles between adjacent panels).
6. Prevent wind uplift by providing adequate temporary loading and/or anchoring (e.g., sandbags) that shall not damage geomembrane. In case of high winds, continuous loading is recommended along panel edges.
7. Protect geomembrane in areas where excessive traffic is expected with geotextiles, extra geomembrane, or other suitable materials.

D. Panel Deployment

1. Replace seriously damaged (torn, twisted, or crimped) field panels, or portions thereof, at no cost to Owner. Repair less serious damage as specified herein. Owner's Representative shall determine if material shall be repaired or replaced.
2. Remove damaged panels or portions of damaged panels that have been rejected from work area.
3. Do not proceed with deployment at ambient temperature below 32°F or above 104°F unless otherwise authorized, in writing, by Owner.
4. Do not deploy during precipitation, in presence of excessive moisture, (fog, dew), in areas of ponded water or in presence of excessive winds.
5. Do not undertake deployment in weather conditions that will preclude material seaming on same day as deployment.
6. Do not deploy more geomembrane field panels in one day than can be seamed during that day.

E. Seam Layout

1. When possible, orient seams parallel to line of maximum slope, i.e., oriented along, not across, slope.
2. No horizontal seam shall be less than 5 ft from the top of or toe of slope.
3. In general, maximize lengths of field panels and minimize number of field seams.
4. Panels should be overlapped, as recommended by the manufacturer, as appropriate for the type of seam welding to be performed; however, overlapping shall be no less than 2 inches.
5. only low ground pressure rubber-tired support equipment approved by the Owner's Representative may be allowed on the geomembrane. If the Owner's Representative observes any potential damage done to the liner by the support equipment, use of the equipment will cease and the damage will be repaired.
6. Personnel working on the geomembrane shall not smoke, wear damaging shoes, or engage in any other activity likely to damage the geomembrane.

F. Seaming Methods

1. Approved processes for field seaming are extrusion fillet welding and fusion welding. Proposed alternate processes shall be documented and submitted to Owner for approval. Alternate procedures shall be used only after being approved in writing by Owner.
2. Seams shall meet requirements in Table 313526B-2:

**Table 313526B-2 Minimum Seam Properties**

| Property | Method | 60-mil HDPE |
|---|---|---|
| Peel Strength (fusion) | ASTM D6392 | 91 ppi |
| Peel Strength (extrusion) | ASTM D6392 | 78 ppi |
| Shear Strength (fusion and extrusion) | ASTM D6392 | 120 ppi |

(1) The strength of four of five specimens shall meet or exceed the value shown in this table. The fifth must meet or exceed 80% of the given value in order to be considered a passing test.
(2) Unacceptable break codes are:
   a. Fusion: AD and AD-Brk>25%
   b. Extrusion: AD1,AD2, AD-WLD (unless strength is achieved)

3. Use fusion welding as primary method of seaming adjacent field panels.

a. Cross seam tees, associated with fusion welding or extrusion welding, shall be patched to a minimum distance of 6-in. on each side of tee.

b. Place welder on protective pad to prevent geomembrane damage between seaming.

c. When subgrade conditions dictate, use movable protective layer (e.g. extra piece of geomembrane) directly below each overlap of geomembrane that is to be seamed to prevent buildup of moisture between sheets and prevent debris from collecting around pressure rollers.

2. Use extrusion fillet welding as secondary method for seaming between adjacent panels and as primary method of welding for detail and repair work.

a. Purge heat-degraded extrudate from barrel of extruder under the following conditions:

i. Prior to beginning seam.

ii. Whenever extruder has been inactive.

b. Place a smooth insulating plate or fabric beneath the hot welding apparatus after usage.

c. Use clean and dry welding rod or extrudate pellets.

d. Complete grinding process without damaging geomembrane and within 1 hour of seaming operation.

e. Minimize exposed grinding marks adjacent to extrusion weld. Do not allow exposed grinding marks to extend more than 1/4 in. outside finished seam area and grind perpendicular to seam.

G. Seaming Procedures

1. Seaming shall not proceed when ambient air temperature or adverse weather conditions jeopardize the integrity of the liner installation. The Installer shall demonstrate that acceptable seaming can be achieved by completing acceptable trial welds.

2. General Seaming Procedures: (Ambient temperature between 32°F and 104°F).

a. Do not field seam without master seamer being present.

b. Dry conditions - no precipitation or other excessive moisture, such as fog or dew.

c. No excessive winds.

d. If required, provide firm substrate by using extra piece of geomembrane, or similar hard surface directly under seam overlap to achieve proper support for seaming apparatus.

e. Align seams with fewest possible number of wrinkles and fishmouths.

f. Extend seams to outside edge of panels placed in anchor trench.

g. Prior to seaming, ensure that seam area is clean and free of moisture, dust, dirt, debris, or foreign material.

h. Fishmouths or wrinkles at seam overlaps shall be cut along ridge of wrinkle in order to achieve flat overlap. Cut fishmouths or wrinkles shall be seamed and any portion where overlap is inadequate shall be patched with an oval or round patch of same geomembrane extending minimum of 6-in. beyond cut in each direction.

H. Repair Procedures

1. Repair portions of geomembrane exhibiting flaws or failing destructive or nondestructive tests.

2. The final decision as to repair procedure shall be agreed upon between Owner, Installer, and Owner's Representative.

3. Acceptable repair procedures include the following:

a. Patching: Piece of same geomembrane material extrusion welded into place. Use to repair large holes, tears, nondispersed raw materials, and contamination by foreign matter. All panel intersections shall be patched.

b. Spot welding or seaming: Bead of molten extrudate placed on flaw. Use to repair small tears, pinholes, or other minor, localized flaws.

c. Capping: Strip of same geomembrane material extrusion welded into place over inadequate seam. Use to repair large lengths of failed seams.

d. Removal and replacement: Remove bad seam and replace with strip of same geomembrane material welded into place. Use to repair large lengths of failed seams.

e. Extrusion welding flap: Repairs of this type shall not be used unless approved by Owner's Representative and shall not exceed 100 feet in length.

4. For each repair method:

a. Ensure surfaces are clean, dry, and prepared in accordance with specified seaming process.

b. Ensure seaming equipment used in repairing procedures meet requirements of this Specification.

c. Extend patches or caps at least 6 in. beyond edge of defect. Round corners of patches with radius of approximately 6 in.

5. Do not place overlying layers over locations which have been repaired until appropriate acceptable nondestructive and destructive (laboratory) test results are obtained.

I. Pipe Boots

1. The pipe boot or sleeve shall be constructed or manufactured with High Density Polyethylene (HDPE) to match other installed geomembrane.

2. The pipe boot or sleeve shall be installed in areas where the geomembrane liner must be penetrated as shown on the Contract drawings.

3. Prior to constructing the boot or sleeve, the Contractor shall assure that the material in the area of the penetration is properly compacted and that the area is clean. The Contractor shall take extreme care in work to assure the geomembrane liner is not damaged.

4. The size of the boot or sleeve shall be adequate to provide 6 inches overlap of the geomembrane liner.

5. Extrusion welding shall be as shown on the Contract drawings.

6. When tightening the stainless-steel adjustment bands, the Installer shall be careful not to over tighten the bands, thereby causing damage to the boot or sleeve.

J. Anchor Trench

1. Contractor shall excavate anchor trenches, unless otherwise specified, to lines and grades shown on design Construction Drawings prior to geomembrane placement. Anchor trench shall be drained to prevent ponding or softening of adjacent soils while trench is open.

2. Slightly rounded corners shall be provided in the anchor trench to avoid sharp bends in geomembrane.

3. If the anchor trench is excavated in clay material susceptible to desiccation, the amount of trench open at any time should be minimized.

4. Remove construction-related debris from anchor trench.

5. Contractor shall backfill and compact anchor trench as soon as practical after geomembrane installation is completed. Take care when backfilling trenches to prevent damage to geosynthetics.

## 3.2 Field Quality Control

A. Visual Inspection

1. Owner's Representative will examine seam and non-seam areas of geomembrane for identification of defects, holes, blisters, nondispersed raw materials, and any sign of contamination by foreign matter.
2. Clean and wash geomembrane surface if Owner's Representative determines that amount of dust or mud inhibits examination.
3. Do not seam any geomembrane panels that have not been examined for flaws by Owner's Representative.
4. Nondestructively test seams and any non-seam areas identified by Owner's Representative.

B. Trial Seams

1. Make trial seams on fragment pieces of geomembrane liner to verify that conditions are adequate for production seaming.
2. Trial seams shall be made at the beginning of each seaming period and shift (generally, at least twice each day) for each combination of production seaming machine and operator to be used that day.
3. Make trial seams under same conditions as actual seams.
4. Make trial seams only under observation of Owner's Representative.
5. Seam overlap shall be as indicated for finished seam.
6. Trial seam sample shall be at least 3 feet long by 1 foot wide (after seaming) with seam centered lengthwise.
7. Cut 4 specimens from sample with 1 inch wide die. These specimen locations shall be selected randomly along trial seam sample by Owner's Representative. Test 2 specimens in inside peel, 2 specimens in outside peel, and 2 specimens in shear using field tensiometer. Samples shall fail in sheet or exceed the specified peel and shear criteria stated in this Specification.
8. If specimen fails, entire trial seam operation shall be repeated. If additional specimen fails, do not use seaming apparatus and seamer until deficiencies are corrected and two (2) consecutive successful trial welds are achieved.

C. Nondestructive Seam Testing

1. General
   a. Purpose of nondestructive tests is to check continuity of seams. It will not provide quantitative information on seam strength.
   b. Nondestructively test field seams over their full length using vacuum test for extrusion seams, air pressure for double-fusion seams, or other Owner approved method. Document results.
   c. Perform nondestructive testing as seaming work progresses.
2. Air Pressure Testing for double-fusion seam:
   a. Seal both ends of seam to be tested.
   b. Insert needle or other approved pressure feed device into air channel created by fusion weld.

c. Insert protective cushion between air pump and geomembrane.

d. Pressurize air channel to 30 psi. Close valve and allow pressure to stabilize for approximately 2 minutes.

e. Observe air pressure 5 minutes after initial 2-minute stabilization period ends. If pressure loss exceeds 3 psi or pressure does not stabilize, locate faulty area and repair.

f. Cut opposite end of tested seam area once testing is completed to verify continuity of air channel. If air does not escape, locate blockage and retest unpressurized area. Repair cut end of air channel.

g. Remove needle or other approved pressure feed device and repair hole in geomembrane.

3. Vacuum Testing for extrusion seam:

a. Energize vacuum pump and reduce tank pressure to approximately 4 to 8 psi gauge pressure.

b. Wet strip of geomembrane approximately 12 in. by 48 in. with soapy solution.

c. Place box over wetted area.

d. Close bleed valve and open vacuum valve.

e. Ensure that leak-tight seal is created.

f. For minimum of 10 seconds, apply vacuum and examine geomembrane through viewing window for presence of soap bubbles.

g. If no bubbles appear within 10 seconds, close vacuum valve and open bleed valve, move box over to next adjoining area with minimum 3 inches overlap and repeat process.

h. Mark and repair areas where soap bubbles appear.

4. Inaccessible Seams:

a. Cap-strip seams that cannot be nondestructively tested.

b. Cap-strip material shall be composed of same type and thickness geomembrane as geomembrane to be capped.

c. Examine cap-stripping operations with Owner's Representative for uniformity and completeness. Document observations.

D. Destructive Seam Testing

1. General

a. Purpose of destructive seam testing to evaluate seam strength.

b. Perform destructive seam test as seaming progresses.

c. The destructive seam sample shall fail if the grips of testing machine cannot be closed on sample test flap (available flap is 1/2 in. long or less) due to excessive temporary welding.

2. Location and frequency:

a. Test at minimum frequency of one test location per 500 feet of welding length performed by each welding machine.

b. Both primary longitudinal and cross seams, cap strips, and repairs 20 square feet or larger shall be counted in the seam length.

c. Test locations shall be determined during seaming at Owner's Representative's discretion.

d. Installer will not be informed in advance of locations where seam samples will be taken.

e. Owner reserves right to increase frequency of testing in accordance with performance results of samples previously tested.

3. Sampling Procedures:
   a. Cut samples at locations chosen by Owner's Representative.
   b. Owner's Representative shall number each sample and record sample number and location in panel layout drawing.
4. Sample Dimensions: Take two 1-inch wide samples for field testing prior to cutting full laboratory sample.
   a. Field Testing: Cut 1 inch wide samples, 6 inches long with seam centered parallel to width. Distance between these 2 samples shall be 42 inches. Test both samples on field tensiometer in peel. If both samples pass field test, take sample for laboratory testing.
   b. Laboratory Testing: Take laboratory test sample from between samples taken for field testing. Cut sample for laboratory testing 12 inches wide by a minimum 42 inches long with seam centered lengthwise. Cut this sample into three parts. Owner's Representative shall distribute parts as follows:
      i. One part to Installer for optional laboratory testing, a minimum 12 inches by 12 inches.
      ii. One part to Geosynthetic Quality Assurance Laboratory for testing, a minimum 12 inches by 18 inches.
      iii. One part to Owner for archive storage, a minimum 12 inches by 12 inches.
   c. Final determination of sample sizes shall be agreed upon at pre-construction meeting.
   d. Submit laboratory sample for quantitative testing
5. Destructive Test Failure Procedures:
   a. When a sample fails destructive testing, whether test is conducted by the Geosynthetic QAL or by field tensiometer, Contractor has following options:
   b. Repair seam between any 2 passing destructive test locations.
   c. Trace welding path to intermediate point (10 feet minimum from point of failed test in each direction) and take small sample with 1 inch wide die for an additional field test at each location. If these additional samples pass test, then take full laboratory samples. If the laboratory samples pass tests, repair seam between these locations. If either sample fails, repeat process to establish zone in which seam should be repaired.
   d. Acceptable repaired seams shall be bound by 2 locations from which samples passing laboratory destructive tests have been taken. In cases exceeding 150 feet of repaired seam, Owner's Representative may have Installer destructively test repair seam.
   e. When the sample fails, Owner may require additional testing of seams that were welded by same welder and/or welding apparatus during same time shift.

E. Repair Verification
   1. Owner's Representative shall observe number and log each repair.
   2. Nondestructively test each repair.
   3. Nondestructive test results that pass shall indicate adequate repair.
   4. Repairs more than 150 feet long require destructive test sampling.
   5. Failed destructive or nondestructive tests indicate that repair shall be redone and retested until passing test results.

F. Large Wrinkles: Wrinkle is considered to be large when geomembrane can be folded over onto itself.

1. When seaming of geomembrane is completed, and prior to placing overlying materials, Owner's Representative shall identify all excessive geomembrane wrinkles, which should be cut and reseamed.
2. Cut and reseam all wrinkles identified by Owner's Representative. Seams produced while repairing wrinkles shall be nondestructively tested.
3. Repair wrinkles identified by Owner's Representative. Repair during coldest part of installation period.

***END OF SECTION***

# SECTION 31 35 26C
# GEOSYNTHETIC CLAY LINER

## 1.0 GENERAL

### 1.1 Description

A. This Section describes the requirements for the manufacture, supply, installation, and quality control of geosynthetic clay liner (GCL).

B. The Work shall be done in accordance with these Specifications and as shown on the Drawings.

C. The Work includes furnishing all labor, tools, materials, equipment, and supervision as may be required to construct the Work.

D. GCL will be placed over compacted General Fill along the upper portions of the pond sideslopes.

E. Additional GCL may be placed over areas where the existing clay liner does not meet the CCR rule requirements.

### 1.2 Related Sections

A. Liner Quality Control Plan

B. ASTM International (ASTM) (latest version):

1. ASTM D4873 – Standard Guide for Identification, Storage, and Handling of Geosynthetic Rolls and Samples
2. ASTM D5887 – Standard Test Method for Measurement of Index Flux Through Saturated Geosynthetic Clay Liner Specimens Using a Flexible Wall Permeameter
3. ASTM D5888 – Standard Guide for Storage and Handling of Geosynthetic Clay Liners
4. ASTM D5889 – Standard Practice for Quality Control of Geosynthetic Clay Liners
5. ASTM D5890 – Standard Test Method for Swell Index of Clay Mineral Component of Geosynthetic Clay Liners
6. ASTM D5891 – Standard Test Method for Fluid Loss of Clay Component of Geosynthetic Clay Liners
7. ASTM D5993 – Standard Test Method for Measuring Mass per Unit of Geosynthetic Clay Liners
8. ASTM D6102 – Standard Guide for Installation of Geosynthetic Clay Liners
9. ASTM D6496 – Standard Test Method for Determining Average Bonding Peel Strength Between Top and Bottom Layers of Needle-Punched Geosynthetic Clay Liners
10. ASTM D6768 – Standard Test Method for Tensile Strength of Geosynthetic Clay Liners

### 1.3 Qualifications

A. Installation of geosynthetic clay liner shall be performed by a Geosynthetics Installer that can demonstrate a minimum of 1,000,000 square feet of successfully completed multi-component composite liner installation experience or provide satisfactory evidence of installation experience and competence with other geosynthetics, as determined by the Owner's Representative.

## 1.4 Submittals

A. The Contractor shall submit to the Owner's Representative the information listed in this section from the Geosynthetics Manufacturer relating to geosynthetic clay liner.

1. Quality control (QC) certificates issued by the raw material supplier, including the production dates of the raw materials used to manufacture geosynthetic clay liner for the project.
2. The QC Manual followed during the manufacturing process, including those for the polymer materials and for detecting foreign objects in the finished goods, and a description of the QC laboratory facilities, including the name and telephone number of the quality control manager.
3. Certificates for test results at the sampling frequency indicated by the QC Manual.
    a. Certificates for each shift's production shall be signed by responsible parties employed by the Geosynthetics Manufacturer.
    b. The certificates shall include roll numbers and identification, sampling procedures, and results of the QC tests verifying conformance for each of the properties listed in Table 313526C-1. Certificates shall be submitted at the frequency indicated in the QC Manual for geosynthetic clay liner that is continuously produced and supplied to the project and at a frequency of at least one per lot. The certificates shall indicate that geosynthetic clay liner produced for the project meets or exceeds the requirements of these Specifications.

## 1.5 Quality Control and Quality Assurance

A. All Work shall be constructed, monitored, and tested in accordance with the Specifications. The Contractor, the Geosynthetics Installer, and the Geosynthetics Manufacturer shall participate and comply with all items in the Specifications.

B. The Geosynthetics Installer and the Contractor shall be aware of all activities outlined in the Specifications and shall account for these activities in the construction schedule.

C. The Manufacturer's quality control shall be in accordance with ASTM D5889, unless otherwise approved by the Owner's Representative.

D. The Geosynthetics Manufacturer shall assure that the geosynthetic clay liner is delivered to the site at least seven (7) calendar days prior to installation.

E. Samples of geosynthetic clay liner shall be collected at the factory as directed by the Owner's Representative for possible laboratory testing to verify compliance with the Specifications. If such testing is performed, passing results must be confirmed by the Owner's Representative prior to shipment of geosynthetic clay liner to the site.

F. Geosynthetic clay liner rolls that do not meet the requirements of the Specifications in the determination of the Owner's Representative shall be rejected. The Geosynthetics Manufacturer shall be required to replace the rejected material with new material that complies with the Specifications at no cost to the Owner.

## 1.6 Delivery, Storage, And Handling

A. Offloading and storage of geosynthetic clay liner is the responsibility of the Contractor. Handling and care of geosynthetic clay liner after acceptance by the Owner's Representative, prior to and following installation, is the responsibility of the Contractor, until final acceptance of the liner system by the Owner's Representative. Handling and storage of geosynthetic clay liner shall be in accordance with ASTM D5888.

B. Rolls shall be stored on a flat, dry surface. If necessary, the Contractor shall store the material off of the ground on pallets or use equivalent means to keep the material from contacting the ground. Tarping the stored materials is suggested to avoid unnecessary stress on the packaging. Geosynthetic clay

liner shall be protected from ultraviolet light exposure, moisture, puncture, cutting, and other damaging or deleterious conditions. Any additional storage procedures required by the Geosynthetics Manufacturer shall be the responsibility of the Contractor.

C. All rolls of geosynthetic clay liner shall be identified at the factory with the following:

1. Name of the Geosynthetics Manufacturer
2. Product identification
3. Lot number
4. Roll number
5. Roll dimensions

D. Geosynthetic clay liner rolls and offloading straps shall be shipped and stored by the Geosynthetics Manufacturer in relatively opaque and watertight wrappings.

E. Rolls shall be handled using a solid steel bar inserted through the core bar and slings or chains attached to the ends of the bar. The core bar shall be suspended from a spreader bar so that the edges of the geosynthetic clay liner are not damaged by the suspending straps or chains.

F. Rolls shall be stored following all recommendations of the Geosynthetics Manufacturer and the requirements of ASTM D4873.

G. Acceptance at the site shall include the activities described in this section.

1. The Owner's Representative shall take inventory and perform surface inspection for defects and damage of geosynthetic clay liner rolls upon delivery.
2. The Contractor shall unroll and inspect any geosynthetic clay liner roll that may be damaged below the surface layers.
3. The Geosynthetics Installer shall repair damage resulting from handling and transport of geosynthetic clay liner to the site. If the damage is irreparable, in the opinion of the Owner's Representative, damaged materials shall be replaced at no cost to the Owner.

H. The Contractor shall preserve the integrity and readability of geosynthetic clay liner roll labels and store the rolls such that the Owner's Representative shall have access to the package slips or roll labels for each roll to verify roll acceptance.

## 2.0 PRODUCTS

### 2.1 Material:

A. The geosynthetic clay liner shall be "Resistex U40" as manufactured by CETCO Lining Technologies; "BentoLiner CAR Plus" as manufactured by Solmax; or Engineer-approved equivalent. The geosynthetic clay liner for the project shall meet or exceed the requirements shown in Table 313526C-1:

**Table 313526C-1: Geosynthetic Clay Liner Properties**

| Geosynthetic Clay Liner Property | Test Method | Requirement |
|---|---|---|
| Bentonite Mass Per Unit Area | ASTM D5993 | 0.75 pounds per square foot (minimum) |
| Peel Strength | ASTM D6496 | 5.0 pounds per inch (minimum) |
| Grab Tensile Strength | ASTM D6768 | 45 pounds per inch (minimum) |
| Hydraulic Conductivity | ASTM D5887 | $3 \times 10^{-9}$ centimeters per second (maximum) |
| Bentonite Swell Index | ASTM D5890 | 24 milliliters per 2 grams (minimum) |
| Bentonite Fluid Loss | ASTM D5891 | 18 milliliters (maximum) |
| GCL Moisture Content | ASTM D5993 | 35 percent (maximum) |

B. The supplier of any proposed alternate GCL will provide data showing compatibility of their GCL with liquids with chemistry similar to Table 313526C-2.

**Table 313526C-2: Site-Specific Liquid Chemistry Data**

| Parameter | Value | Unit |
|---|---|---|
| pH | 6.52 | |
| Alkalinity | 68.0 | ppm |
| Sb | 0.00155 | ppm |
| As | <0.002 | ppm |
| Ba | 0.0835 | ppm |
| Be | <0.0003 | ppm |
| B | 73.3 | ppm |
| Cd | 0.000348 | ppm |
| Ca | 487 | ppm |
| Cl | 1510 | ppm |
| Cr | 0.00427 | ppm |
| Co | <0.003 | ppm |
| Fe(3) | <0.05 | ppm |
| Fe(2) | <0.05 | ppm |
| F | 17.5 | ppm |
| Pb | <0.0003 | ppm |
| Li | 0.172 | ppm |
| Mg | 809 | ppm |
| Hg | 0.00134 | ppm |
| Mo | 0.241 | ppm |
| N(5) | 3.24 | ppm |
| P | <0.03 | ppm |
| K | 86.9 | ppm |
| Se | 1.3 | ppm |
| Na | 287 | ppm |
| S04(6) | 3260 | ppm |
| Tl | 0.00144 | ppm |

C. Needled geosynthetic clay liners are those that, by a process that employs a needling board, have fibers of a non-woven geotextile pushed through a bentonite layer and integrated into a woven or non-woven geotextile on the opposite side of the bentonite layer from the first geotextile without the use of any chemical binders or adhesives.

D. The geosynthetic clay liner shall be manufactured using the mechanical bonding of the needle-punching process to enhance the frictional characteristics of the product and to maintain the integrity of the geosynthetic clay liner under hydration. No glues or adhesives shall be used in lieu of the needle-punching process so as to retain these characteristics.

E. No disassociation of geotextile components from the bentonite shall occur. A sample of the bentonite and geotextile components placed in tap water at 70 degrees Fahrenheit for one (1) hour shall not show evidence of delamination.

F. The geosynthetic clay liner shall be manufactured utilizing a minimum of 0.75 pound per square foot of polymer-enhance, high-swelling sodium bentonite.

G. Rolls shall be manufactured at least 12 feet wide.

H. All rolls shall be labeled and bagged in packaging that is resistant to photodegradation by ultraviolet light.

I. Accessory bentonite used for sealing seams, penetrations, and repairs shall be the same granular bentonite as used in the production of the geosynthetic clay liner.

## 3.0 EXECUTION

### 3.1 Installation

A. Installation shall be in accordance with ASTM D6102, unless otherwise indicated in these Specifications or on the Drawings.

B. The Geosynthetics Installer shall install the GCL over eroded areas on the sideslopes in accordance with the procedures listed in this section.

1. Repair rough areas and any damage to the subgrade by placing and densifying general fill approved by the Owner's Representative in any ruts caused by equipment prior to GCL deployment. Surfaces to be lined shall be smooth and free of any debris, vegetation, roots, sticks, sharp rocks, protrusions larger than 0.5 inches, soil particles larger than one (1) inch in the longest dimension, and any other deleterious materials, as well as free of any voids, large cracks, standing water, and ice.
2. Install the geosynthetic clay liner so that panel seams are parallel to the dip of the slope.
3. Pull geosynthetic clay liner panels from a roll suspended at the crest of the slope.

C. The Geosynthetics Installer shall install the geosynthetic clay liner over isolated areas not meeting the CCR regulations in accordance with the procedures listed in this section.

1. Repair rough areas and any damage to the subgrade by scarifying and compacting the existing clay liner prior to GCL deployment. Surfaces to be lined shall be smooth and free of any debris, vegetation, roots, sticks, sharp rocks, protrusions larger than 0.5 inches, soil particles larger than one (1) inch in the longest dimension, and any other deleterious materials, as well as free of any voids, large cracks, standing water, and ice.
2. Extend the geosynthetic clay liner a minimum of 24 inches beyond the failing clay liner as determined by the Owner's representative. Cut a small notch measuring approximately three (3) inches wide and eight (8) inches deep in the subgrade approximately 6 inches from the edge of the GCL. The Geosynthetics Installer shall compact a mixture of one (1) part bentonite to four (4) parts soil by volume, blended dry, into the bottom half of the notch. The geosynthetic clay liner

shall then be inserted into the notch. The Geosynthetics Installer shall then fill the remaining notch volume with bentonite or compact the mixture of one (1) part bentonite to four (4) parts soil by volume, blended dry, into the remaining notch volume

D. The Geosynthetic Installer shall install all geosynthetic clay liner in accordance with the following procedures.

3. Do not install geosynthetic clay liner over saturated subgrade, in standing water, or during precipitation events.
4. Overlap geosynthetic clay liner panels in accordance with the recommendations of the Geosynthetics Manufacturer. At a minimum, the overlap shall be six (6) inches along the length of the geosynthetic clay liner panel and 24 inches along the width of the geosynthetic clay liner panel. Contacting surfaces shall be clean and free from dirt or native soil with all edges pulled tight to maximize contact and to smooth out wrinkles and creases. Heat tack the seams with a brief application of a flame torch followed by light pressure or with a hot-air device, also known as a Leister.
5. Augment seams with granular bentonite if recommended by the Geosynthetics Manufacturer to ensure seam integrity. Accessory bentonite shall be of the same type as the bentonite within the geosynthetic clay liner.
6. Place only as much geosynthetic clay liner each day as can be covered on the same day. The geosynthetic clay liner shall be covered before the end of each working day. Exposed edges shall be covered by a temporary tarp or other such water-resistant sheeting until the next working day.
7. Do not drag geosynthetic clay liner or textured geomembrane over previously installed geosynthetic clay liner. Use a smooth rub sheet if needed to prevent damage.
8. Do not allow geosynthetic clay liner to become wetted, except by the subgrade, prior to placement of the overlying geomembrane. All hydrated geosynthetic clay liner shall be removed and replaced by the Geosynthetics Installer at no cost to the Owner.
9. For any penetrations or structures the geosynthetic clay liner will contact, cut a small notch measuring approximately three (3) inches wide and eight (8) inches deep in the subgrade along the edge of the area. The geosynthetic clay liner shall be brought up to the appurtenance and trimmed to fit into the notch. The Geosynthetics Installer shall compact a mixture of one (1) part bentonite to four (4) parts soil by volume, blended dry, into the bottom half of the notch. The geosynthetic clay liner shall then be inserted into the notch. The Geosynthetics Installer shall then fill the remaining notch volume with bentonite or compact the mixture of one (1) part bentonite to four (4) parts soil by volume, blended dry, into the remaining notch volume.

## 3.2 Repair

A. The Geosynthetics Installer shall repair cuts, tears, and holes in the geosynthetic clay liner by covering them with a geosynthetic clay liner patch per the recommendations of the Geosynthetics Manufacturer. The patch shall overlap the edges of the cut, hole, or tear by a minimum of two (2) feet in all directions. Accessory bentonite shall be placed between the patch and the repaired material at a rate of at least one-quarter (1/4) pound per lineal foot of edge.

B. The Geosynthetics Installer shall attach patches to panels using either non-hazardous, non-toxic adhesive as recommended by the Geosynthetics Manufacturer or by spot welding with a hot-air apparatus, also known as a Leister. The attachment method shall be approved by the Owner's Representative prior to use.

C. All repairs shall be made at no additional cost to the Owner.

## 3.3 Conformance Testing

A. The GCL material shall be made available to the Owner's Representative for sampling and conformance testing at a minimum frequency of one (1) sample per lot.

B. If a test result is out of conformance with the Specifications, all material from the lot represented by the failed test is subject to rejection. The amount of rejected material may be reduced by bounding the non-conforming material with passing tests. Additional testing and replaced material will be provided at no additional cost to the Owner. If conformance testing is performed, no material shall be shipped until confirmation has been received from the Owner's Representative that the samples have passed conformance testing.

## 3.4 Field Quality Control

A. The Contractor shall not permit traffic directly over any geosynthetic materials.

B. The Contractor shall place overlying materials in such a manner as to ensure that:

1. The geosynthetic clay liner and underlying materials are not damaged.
2. Excess tensile stresses are not developed in the geosynthetic clay liner by earth moving equipment making sudden starts, stops or turns.
3. Minimal movement and wrinkling or folding of geosynthetic layers occurs.
4. The geosynthetic clay liner is fully covered at the end of each working day to prevent potential damage by moisture and wildlife.

C. Care shall be taken to prevent damage to geosynthetic materials. At no time shall construction equipment come into direct contact with geosynthetic materials. If damage occurs, it shall be repaired by the Contractor at no cost to the Owner.

## 3.5 Survey Control

A. The Owner's Surveyor will perform a survey of geosynthetic clay liner placement areas.

**DIVISION 33**

# Utilities

# SECTION 33 05 33
# POLYETHYLENE PIPE

## 1.0 GENERAL

### 1.1 Summary

A. This Section describes the requirements for polyethylene pipe and fittings.

B. The Work shall be done in strict accordance with these Specifications and as shown on the Drawings.

C. The Contractor shall furnish all labor, tools, materials, equipment, and supervision as may be required to complete the Work.

### 1.2 Related Project Specs

A. Section 31 23 00 – Earthwork

### 1.3 References

A. ASTM International (ASTM) (latest version):

1. ASTM D2321 – Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
2. ASTM D3350 – Standard Specification for Polyethylene Plastics Pipe and Fittings Materials.
3. ASTM F714 – Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Outside Diameter
4. ASTM F2620 – Standard Practice for Heat Fusion Joining of Polyethylene Pipe and Fittings.
5. ASTM F2164 – Standard Practice for Field Leak Testing of Polyethylene (PE) and Crosslinked Polyethylene (PEX) Pressure Piping Systems Using Hydrostatic Pressure

B. Handbook of Polyethylene Pipe, 2nd Edition – Plastic Pipe Institute, 2008

### 1.4 Submittals

A. The Contractor shall submit manufactured materials information for piping components of the Work including, but not limited to, the Manufacturer's product data to the Owner's Representative for approval at least 10 working days prior to delivery.

### 1.5 Tolerances

A. Fill areas are defined by the lines and grades shown on the Drawings.

B. Installation shall achieve uniform gradients without sags or humps and maintain grades and slopes shown on the Drawings to provide positive drainage control at all times.

C. The tolerances for construction, unless otherwise approved by the Owner's Representative, shall be as follows:

1. For pipe invert, the horizontal and vertical construction tolerances are as follows:
   a. Line:± 0.2 feet
   b. Grade:± 0.1 feet

D. Correction of over excavation or locating portions of the Work outside the tolerances shall be completed by the Contractor at no expense to the Owner.

## 1.6 Quality Control/Quality Assurance

A. All Work shall be constructed, monitored, and tested in accordance with the requirements set forth by the Owner's Representative.

B. The Contractor shall be aware of all testing activities and shall account for these activities in the construction schedule.

C. All excavation, backfill, and grading operations shall be carried out under the observation of the Owner's Representative.

D. Any Work found unsatisfactory or any Work disturbed by subsequent operations before acceptance is granted shall be corrected by the Contractor as directed by the Owner's Representative at no additional cost to the Owner.

## 1.7 Protection of Existing Services and Utilities

A. The Contractor shall locate existing utilities, pipes, culverts, and structures, above and below ground, before any excavation starts and shall coordinate the Work with local utility companies and the Owner's Representative. The Contractor shall protect, maintain in service, and prevent damage to utilities not designated for removal.

B. The Contractor shall be responsible for locating all underground utilities and shall exercise care to avoid disturbing or damaging any existing wells, sumps, electrical poles and lines, permanent below-ground utilities, permanent drainage structures, temporary utilities and structures, and other items. If the Contractor encounters any unexpected underground utilities during the course of the Work, the Contractor shall immediately inform the Owner's Representative. When the Work requires the Contractor to be near or cross known utilities, the Contractor shall carefully uncover, support, and protect these utilities and shall not cut, damage, or otherwise disturb them without prior authorization from the Owner's Representative. Unless noted otherwise on the Drawings, utilities damaged by the Contractor shall be immediately repaired by the Contractor to the satisfaction of the Owner's Representative at no additional cost to the Owner. Any required shutdowns of active utilities or site operations shall be coordinated with the Owner.

# 2.0 PRODUCTS

## 2.1 Earthen Materials

A. Bedding and backfill materials used in conjunction with this Work shall be furnished by the Contractor.

B. Pipe bedding materials shall be free of organics and other deleterious materials and shall meet the requirements for Pipe Bedding described in Section 31 00 00 – Earthwork, unless otherwise approved by the Owner's Representative.

C. Pipe embedment materials shall be free of organics and other deleterious materials and shall meet the requirements for Pipe Bedding described in Section 31 00 00 – Earthwork, unless otherwise approved by the Owner's Representative.

D. Backfill materials shall be free of organics and other deleterious materials and shall meet the requirements for Embankment Fill described in Section 31 00 00 – Earthwork, unless otherwise approved by the Owner's Representative.

## 2.2 Piping and Fittings

A. Piping and fittings used in conjunction with this Work shall be furnished by the Contractor.

B. All materials and equipment shall be new and undamaged and shall be approved by the Owner's Representative prior to delivery.

C. Piping shall be solid-wall high-density polyethylene pipe of the diameter and diameter ratio (DR) shown on the Drawings. Piping shall meet the requirements of ASTM D3350 and ASTM F714 (Iron Pipe Size). Joints shall be butt fusion-welded joints, unless otherwise shown on the Drawings or approved by the Owner's Representative

D. Polyethylene piping shall be PE Resin 4710 or alternate as approved by the Owner's Representative.

## 2.3 Plastic Marking Tape

A. Plastic marking tape used in conjunction with this Work shall be furnished by the Contractor.

B. Plastic marking tape shall be acid and alkali-resistant polyethylene film, 6-inches side with minimum thickness of 0.004 inches. The tape shall be manufactured with integral wires, foil backing or other means to enable detection by a metal detector when the tape is buried up to 3 feet deep. The tape shall be of a type specifically manufactured for marking and locating underground utilities. The metallic core of the tape shall be encased in a protective jacket or provide with other means to protect it from corrosion.

C. Plastic marking tape shall be approved by the Owner's Representative prior to delivery.

# 3.0 EXECUTION

## 3.1 Pipe Bedding and Backfill

A. Pipe Bedding shall be placed as follows:

1. The base of pipe excavations shall be constructed to provide a firm and unyielding surface meeting the requirements of prepared subgrade under Section 31 00 00 – Earthwork or as approved by the Owner's Representative.
2. Loose Pipe Bedding material shall have a minimum thickness of 3 inches.
3. The entire barrel of the pipe shall be fully supported for its entire length.
4. The pipe surface shall be kept clean. The Contractor shall exercise care to keep dirt and other material from entering the pipe during placement in the trench and shall close the ends of in-place pipe at the end of the work period to prevent entry of animals and foreign material.

B. Pipe Embedment shall be placed as follows:

1. Pipe embedment shall be placed in uniform horizontal loose lifts not to exceed 6 inches in thickness to a minimum of 12 inches above the top of the pipe(s) being backfilled.
2. Place compact Pipe Bedding under the sides of the pipe to the pipe spring line (haunching area), taking care during placement and compaction of this material to ensure continuous support is developed under the pipe haunches while avoiding either vertical or lateral displacement of the pipe from its intended position. Compact pipe bedding in the haunching area using manual or mechanical tamping techniques.
3. Place and compact Pipe Bedding from the spring line of the pipe to a minimum of 12 inches above the top of the pipe in uniform horizontal lifts. Bring up the level of Pipe Bedding uniformly on both sides of the pipe along the full length of each pipe section taking care not to damage the pipe.
4. Pay special attention to proper compaction of the materials in the pipe haunching area and sides to ensure adequate side support is developed. The material directly above the pipe in the pipe embedment zone shall be only lightly compacted to avoid distorting the pipe. Compacted density requirements do not apply to materials in this area directly over flexible pipe.

C. Pipe Backfill shall be placed as follows:

1. Embankment Fill shall be placed and compacted to the meet the requirements of Section 31 00 00 – Earthwork.
2. The Contractor shall install plastic marking tape (as specified) above the pipe at a depth of 1 to 2 feet below the finished grade.
3. Pipe backfill shall be placed to the grades shown on the Drawings.

## 3.2 Unloading and Storage of Pipe and Fittings

A. The unloading and loading of pipe, fittings, and related accessories shall be performed with care so as to avoid damage to these materials. Upon arrival at the site, the pipe should be inspected for quantity and shipping damage. Unloading can be performed by hand or with equipment using lifting tongs or nylon slings.

B. Materials shall not be stored directly on the ground but shall be placed on pallets or other suitable supports to prevent the entry of mud and debris into the pipe. The Contractor shall also endeavor to store materials in accordance with any special practices that may be recommended by the Manufacturer.

C. Maximum stacking height of HDPE pipe shall be in accordance with the Manufacturer's Manual or equivalent for storage requirements, based on pipe size and wall thickness.

D. When storing HDPE pipe, stack the heaviest pipe at the bottom.

## 3.3 Installation of Piping and Fittings

A. The line and grade of all piping shall be established and verified by survey as described on the Drawings.

B. Piping shall be installed in accordance with ASTM D2321 and per the Manufacturer's recommendations

C. Pipe shall be cut neatly and without damage to the pipe. Unless otherwise recommended by the pipe manufacturer, cut pipe with mechanical cutter only. Cut plastic pipe square, using a hand saw, and remove all burrs.

D. Lower pipe and accessories into trench by means of derrick, ropes, belt slings, or other equipment recommended by the pipe supplier. Take special care in handling prefabricated sections of HDPE pipe. Do not dump or drop any of the materials of this specification into the trench.

E. Heat fusion joining of pipe and fittings shall be in accordance with ASTM F2620 and the Manufacturer's recommendations.

F. Butt fused joints shall be made by craft persons certified for the fusion machine and piping materials being utilized. Initial training or a refresher course by a certified instructor is recommended.

G. Securely close open ends of the pipe, fittings, and valves when work is not in progress.

## 3.4 Inspection and Testing of Piping System

A. Visual testing of pipe systems shall be performed to verify the accuracy of the alignment and grade and freedom from major defects, debris, and obstructions.

B. Pressure piping system constructed from HDPE material shall be leakage tested using the methodology outlined in the ASTM F2164 ("Field Leak Testing of Polyethylene (PE) Pressure Piping Systems Using Hydrostatic Pressure") and the manufacturers recommendations. HDPE pipe expands under test pressure, and this method provides and estimated allowance for this expansion consideration.

1. Test pressure should not exceed 1.5 times the design pressure of the pipe or the lowest rated component in the system. Relief valve shall be provided in the test setup to prevent overpressure due to sun exposure or from accidental over-pumping.
2. The pressure test can be conducted before or after the pipe is backfilled. At a minimum, the pipe should be covered at intervals, particularly at curves and changes in direction to hold the pipe in place during the pressure test. Mechanical joints should be left exposed for visual leak inspection, if practical.

## 3.5 Field Quality Control

A. The Contractor is responsible for quality control during all phases of construction.

B. The Owner's Representative will observe pipe installation to verify that the Contractor is complying with the Specifications and Drawings. The Contractor shall allow the Owner's Representative access to all phases of the Work to carry out the required observations and shall assist the Owner's Representative in obtaining samples and conducting tests as necessary.

## 3.6 Protection of Work

A. The Contractor shall use all means necessary to protect materials and partially completed and completed Work.

B. In the event of damage, the Owner's Representative will identify areas requiring repair, and the Contractor shall make repairs and replacements to the satisfaction of the Owner's Representative at no additional cost to the Owner.

***END OF SECTION***

**DIVISION 35**

# Waterway Construction

# SECTION 35 31 19
# EROSION CONTROL LINING

## 1.0 GENERAL

### 1.1 Description

A. The work shall consist of installing an concrete lining by positioning specially woven, double-layer synthetic forms on the geomembrane-lined sideslopes to be protected and filling them with a pumpable fine aggregate concrete (structural grout) in such a manner as to form a stable lining of required thickness, weight and configuration.

B. The Contractor shall furnish all labor, materials, equipment, and incidentals as maybe required and perform all operations in connection with the installation of the fabric formed concrete erosion control lining systems in accordance with the lines, grades, design, and dimensions shown on the Drawings and as specified herein.

C. The fabric forms are constructed of woven, double-layer synthetic fabric. Hydrotex® uniform section linings, or equal, are installed by positioning fabric forms over the areas to be protected and then pumping, high-strength, fine aggregate concrete into the forms. The high-strength, fine aggregate concrete is used in place of conventional concrete because of its pumpability, high-strength, impermeability, and absorption resistance.

### 1.2 References

24. ASTM D5199 -- Test Method for Measuring Nominal Thickness of Geotextiles and Geomembranes
25. ASTM D5261 -- Test Method for Measuring Mass per Unit Area of Geotextiles
26. ASTM D6241 -- Standard Test Method for Static Puncture Strength of Geotextiles and Geotextile-Related Products Using a 2-inch [50-mm] Probe
27. ASTM D6449 -- Standard Method for Flow of Fine Aggregate Concrete for Fabric Formed Concrete

## 1.3 Submittals

A. The Contractor/Subcontractor shall submit the following at the time of bid:

1. Project References with contacts of direct installation of fabric formed concrete products installed in similar applications, totaling a minimum of 200,000 square feet.
2. Concrete Mix Design

B. The fabric form manufacturer shall furnish the following required submittals:

1. Certification Letter of Approved Installer. This letter should state the contractor or subcontractor has sufficient experience with the manufacturer's product and that the manufacturer certifies the installer is experienced in all aspects of construction as required by the project conditions.
2. Full-Scale Flume Test Report. Report of such hydraulic testing shall be by an industry accredited laboratory, including the tested maximum shear stress, velocity, and other pertinent hydraulic and geometric data.
3. Materials Property Test Results. These results showing conformance must be performed within 90 days prior to the bid date.
4. Certificate of Compliance. This certificate shall state that the fabric forms meet or exceed all aspects of this Specification and shall be signed by an officer of the company.
5. Manufacturer's name and current address; Full product name;
6. Style and product code number; Form number(s)
7. Manufacturer's Hydraulic Stability Calculation Report. This report shall include calculations of applied shear stress, resisting shear stress, with a corresponding factor of safety for the product, along with requirements, recommendations, and details.
8. Concrete Mix Design Approval.This approval from the fabric form manufacturer shall note manufacturer's mix design number and any other designation noted on the mix design report.
9. Shop Drawings and Layout. Individual panel drawings with dimensions and a panel layout drawing.

10. Recommendations or Notes. If applicable, these items should be specifically related to the project.

C. Alternative fabric formed concrete lining materials shall not be considered that do not meet this Specification. Alternative material packages must be submitted to the Engineer a minimum of fourteen (14) days prior to the bid date. Submittal packages must include, as a minimum, the above noted requirements. Material testing reports prepared by a certified geotextile laboratory attesting to the alternative fabric form material's compliance with this Specification. Material laboratory testing shall have been performed within ninety (90) days of the bid date.

## 2.0 PRODUCTS

### 2.1 Fabric Forms

A. The fabric forms for casting the concrete lining(s) shall be as specified, HYDROTEX® Uniform Section US600 fabric forms, or Engineer approved equal, as manufactured by:,

Synthetex, LLC
5550 Triangle Parkway, Suite 220
Peachtree Corners, Georgia 30092 USA
Tel: 800.253.0561 or 770.399.5051
E-Mail: info@synthetex.com

B. The fabric forms shall be composed of synthetic yarns formed into a woven fabric. Yarns used in the manufacture of the fabric shall be composed of polyester. Forms shall be woven with a minimum of 50% textured yarns (by weight). Partially-oriented (POY), draw-textured, and/or staple yarns shall not be used in the manufacture of the fabric. The fabric shall conform to the physical, mechanical and hydraulic requirements Mean Average Roll Values listed in Table 1.0. The fabric forms shall be free of defects or flaws which significantly affect their physical, mechanical, or hydraulic properties.

**Table 353119-1 PROPERTY REQUIREMENTS – HYDROTEX FABRIC [1, 2]**

| Properties | Testing Method | Units | MARV |
|---|---|---|---|
| Composition of Yarns | - | - | Polyester |
| Mass Per Unit Area (double-layer) | ASTM D5261 | oz/yd$^2$ | 13 |
| Thickness (single-layer) | ASTM D 5199 | mils | 15 |
| Mill Width (Woven) minimum | | inch | 84 |
| Wide-Width Strip Tensile Strength - MD \| TD | ASTM D4595 | lbs/inch | 300 \| 350 |
| Elongation at Break - MD \| TD - Max. | | % | 15 \| 15 |
| Trapezoidal Tear Strength - MD \| TD | ASTM D4533 | lbs | 150 \| 175 |
| CBR Puncture Strength | ASTM D6241 | lbs | 1250 |
| Mullen Burst Strength | ASTM D3786 (Mod.) | psi | 500 |
| Apparent Opening Size (AOS) | ASTM D4751 | U.S. Standard Sieve | 30 - 40 |
| Flow Rate | ASTM D4491 | gal/min/ft$^2$ | 30 - 55 |

(1) Conformance of fabric to specification property requirements shall be based on ASTM D4759.
(2) All numerical values represent minimum average roll values (i.e., average of test results from any sample roll in a lot shall meet or exceed the minimum values). Lots shall be sampled according to ASTM D4354.

C. Fabric forms shall consist of double-layer woven fabric joined together by spaced, interwoven cords of uniform length to form a concrete lining of the specified average thickness. The cords shall be

interwoven between the two layers of fabric, in parallel pairs, so that the two (2) cords together in the top layer and two (2) cords together in the bottom layer cross between layers at drop points. Each cord shall have a minimum breaking strength of 160 pounds when tested in accordance with ASTM D2256.

D. Mill widths of fabric shall be a minimum of 84 inches. Each selvage edge of the top and bottom layers of fabric shall be reinforced for a width of not less than 1.35 inches by adding a minimum of 6 warp yarns to each selvage construction. Mill width rolls shall be cut to the length required, and the double-layer fabric separately joined, bottom layer to bottom layer and top layer to top layer, by means of sewing thread, to form multiple mill width panels with sewn seams.

E. Fabric form panels shall be factory-sewn, by jointing together the layers of fabric, top layer to top layer and bottom layer to bottom layer, into predetermined custom sized panels. Sewn seams shall be downward facing as shown on the Contract Drawings. All sewn seams and zipper attachments shall be made using a double line of U.S. Federal Standard Type 401 stitch. All seams sewn shall be not less than 100 lbf/inch when tested in accordance with ASTM D4884. Both lines of stitches shall be sewn simultaneously and be parallel to each other, spaced between 0.25 inches to 0.75 inches apart. Each row of stitching shall consist of 4 to 7 stitches per inch. Thread used for seaming shall be polyester.

F. Revetment cables shall be installed in the longitudinal directions between the two layers of fabric. Longitudinal cables, on approximately 36-inch centers or as required by the Engineer.

G. Revetment cables shall be constructed of **high-strength polyester. Longitudinal cables shall be nominally 0.25 inches in diameter and their rated breaking strength shall be not less than 3.700 pound-force (Consult manufacturer for cable recommendations for the application).** Cable fittings shall be selected so that the resultant cable splice shall provide a minimum of 80 percent of the rated breaking strength of the cable. All cable splices shall have a minimum cable overlap of 6 inches (15.3 cm) and be made with aluminum compression fittings. Polyester Revetment Cables shall be constructed of high tenacity, low elongation, and continuous filament polyester fibers. Cable shall consist of a core constructed of parallel fibers contained within an outer jacket or cover. The weight of the parallel core shall be between 65% to 70% of the total weight of the cable.

H. Baffles shall be installed at predetermined mill width intervals to regulate the distance of lateral flow of fine aggregate concrete. The baffles shall be designed to maintain a full concrete lining thickness along the full length of the baffle. The baffle material shall be nonwoven filter fabric. The grab tensile strength of the filter fabric shall be not less than 180 lbf/inch when tested in accordance with ASTM D4632.

I. The fabric forms shall be kept dry and wrapped such that they are protected from the elements during shipping and storage. If stored outdoors, they shall be elevated and protected with a waterproof cover that is opaque to ultraviolet light. The fabric forms shall be labeled as per ASTM D4873.

J. If recommended by manufacturer, plastic weep tubes (drains) are pre-installed at designated locations to relieve hydrostatic pressure. The tubes have a flange at one end and a point at the other end of a 7/8-inch diameter barrel. The pointed end has four small holes that allow the passage of water but retain large soil particles. There is a flanged cap that is placed over the pointed end and locks in place. The locations of weep tubes, if required, are clearly marked on the fabric form panel shop drawings. Weep tubes are assembled by forcing the pointed end of the weep tube through both the top and bottom layers of the fabric form and locking the flanged cap over the pointed end. A small square of filter fabric can be placed over the in-place flanged cap and secured with a fastener or the fabric form can be placed over a continuous layer of as-specified filter fabric. In either case the filter fabric should prevent fine soil particles from passing through the weep tube.

## 2.2 Fine Aggregate Concrete

A. Fine aggregate concrete consists of a mixture of Portland cement, fine aggregate (sand) and water, so proportioned and mixed as to provide a pumpable fine aggregate concrete.

B. The water/cement ratio of the fine aggregate concrete shall be determined by the ready-mix manufacturer, but generally should be on the order of 0.65 to 0.70. The pumping of fine aggregate

concrete into the fabric forms causes a reduction in the water content by filtering excess mixing water through the permeable fabric. The reduction of mixing water substantially improves the water/cement ratio of the in-place fine aggregate concrete thereby increasing its strength and durability. The sand/cement ratio should be determined by the ready-mix manufacturer and should be on the order of 2.4:1.

C. The consistency of the fine aggregate concrete delivered to the concrete pump should be proportioned and mixed as to have a flow time of 9-12 seconds when passed through the ¾" (19 mm) orifice of the standard flow cone that is described in ASTM C6449-99. Additional Pozzolan and/or admixtures may be used with the approval of the Engineer. The water/cement ratio varies with the exact granulometry of the fine aggregate (sand) and should be determined by the ready-mix manufacturer using the above referenced flow cone.

D. The Contractor should demonstrate the suitability by placing the proposed fine aggregate concrete mix into three (3) 2-inch concrete cubes or grout prisms. The mix should exhibit a minimum compressive strength of 2,000 psi at 28 days, when made and tested in accordance ASTM C109/C109M-13 and ASTM C1019.

E. With a typical loss of approximately 15% of the total mixing water, 27 cubic feet of pumpable fine aggregate concrete will reduce to approximately 25 cubic feet of hardened concrete. The mixing water reduction will also result in an increase of approximately 8% in the sand and cement per cubic foot of concrete. The range of fine aggregate concrete mix proportions provided in the table below has been developed under a variety of field conditions.

F. Typical Range of Mix Proportion

| **Material** | **Mix Proportions lb/yd$^3$** | **After Placement Mix Proportions lb/yd$^3$** |
|---|---|---|
| Cement | 750-850 | 805-915 |
| Sand | 2120-2030 | 2290-2190 |
| Water | 540-555 | 460-470 |
| Air | As Required | As Required |

## 3.0 CONSTRUCTION AND INSTALLATION REQUIREMENTS

### 3.1 Site Preparation

A. The Erosion Control Lining shall be placed directly over the geomembrane. Care shall be taken to prevent damaging the geomembrane.

### 3.2 Fabric Form Placement

A. Factory assembled fabric form panels shall be placed over the 60-mil textured HDPE Geomembrane within the limits shown on the Contract Drawings. Perimeter termination of the fabric forms shall be accomplished through the use of an anchor trench, as shown on the Drawings. When placing panels an allowance for approximately 10% contraction of the form in each direction which will occur as a result of fine aggregate concrete filling. The contractor shall gather and fold the additional slope direction fabric form in the anchor trench to be secured in such a manner as to be gradually released as fabric forms contract during filling. The contractor shall gather the additional transverse direction fabric form at each baffle for self-release during filling.

B. Adjacent fabric form panels shall be joined in the field by means of sewing or zippering closures. Adjacent panels shall be joined top layer to top layer and bottom layer to bottom layer. All field seams

shall be made using two lines of U.S. Federal Standard Type 101 stitches. All sewn seams shall be downward facing.

C. When conventional joining of fabric forms is impractical or where called for on the Contract Drawings, adjacent forms may be overlapped a minimum of 3 feet to form a lap joint, pending approval by the Engineer. Based on the predominant flow direction, the upstream form shall overlap the downstream form. In no case shall simple butt joints between forms be permitted.

D. Expansion joints shall be provided as shown on the Contract Drawings, or as specified by the Engineer.

E. Immediately prior to filling with fine aggregate concrete, the assembled fabric forms shall be inspected by the Engineer, and no fine aggregate concrete shall be pumped therein until the fabric seams have been approved. At no time shall the unfilled fabric forms be exposed to ultraviolet light (including direct sunlight) for a period exceeding five (5) days.

## 3.3 Fine Aggregate Concrete Placement

A. Following the placement of the fabric forms over the geomembrane, fine aggregate concrete shall be pumped between the top and bottom layers of the fabric form through small slits to be cut in the top layer of the fabric form or manufacturer supplied valves. The slits shall be of the minimum length to allow proper insertion of a filling pipe inserted at the end of a 2-inch I.D. concrete pump hose. Fine aggregate concrete shall be pumped between the top and bottom layers of fabric, filling the forms to the recommended thickness and configuration.

B. Holes in the fabric forms left by the removal of the filling pipe shall be temporarily closed by inserting a piece of fabric. The fabric shall be removed when the concrete is no longer fluid and the concrete surface at the hole shall be cleaned and smoothed by hand.

C. Fine aggregate concrete shall be pumped in such a manner that excessive pressure on the fabric forms is avoided. Consultation with the fabric form manufacturer with regard to the selection of grout/concrete pumps is recommended.

D. Cold joints shall be avoided. A cold joint is defined as one in which the pumping of the fine aggregate concrete into a given section of form is discontinued or interrupted for an interval of forty-five (45) or more minutes.

E. The sequence of fine aggregate concrete shall be such as to ensure complete filling of the fabric formed concrete lining to the thickness specified by the Engineer. The flow of the fine aggregate concrete shall first be directed into the lower edge of the fabric form and working back up the slope, followed by redirecting the flow into the anchor trench.

F. Prior to removing the filling pipe from the current concrete lining section and proceeding to the fine aggregate concrete filling of the adjacent lining section, the thickness of the current lining section shall be measured by inserting a length of stiff wire through the lining at several locations from the crest to the toe of the slope. The average of all thickness measurements shall be not less than the specified average thickness of the concrete lining. Should the measurements not meet the specified average thickness, pumping shall continue until the specified average thickness has been attained.

G. Excessive fine aggregate concrete that has inadvertently spilled on the concrete lining surface shall be removed. The use of a high-pressure water hose to remove spilled fine aggregate concrete from the surface of the freshly pumped concrete lining shall not be permitted.

H. Foot traffic will not be permitted on the freshly pumped concrete lining when such traffic will cause permanent indentations in the lining surface. Walk boards shall be used where necessary.

I. After the fine aggregate concrete has set, all anchor trenches shall be backfilled and compacted flush with the top of the concrete lining. The integrity of the trench backfill must be maintained so as to ensure a surface that is flush with the top surface of the concrete lining for its entire service life. No more than five hundred (500) linear feet of pumped concrete lining with non-completed anchor trench

will be permitted at any time.

# 1.0 PURPOSE

## 1.1 Purpose and Scope

This Liner Quality Control Plan (LQCP), is prepared under the direction of a licensed professional engineer, and establishes the procedures for construction, testing, and documentation of the retrofit liner system for FGD-A at the Oak Grove Steam Electric Station (OGSES).

This LQCP was developed to address the construction and quality control testing of components of the liner system in compliance with 40 Code of Federal Regulations (CFR) §257.102(k) in the CCR Rule. Construction and testing of all liner systems components must be according to this LQCP.

The FGD-A retrofit measures will consist of the following.

- Removal of roughly the upper 1 foot of the existing 3-foot thick clay liner
- Retrofit FGD-A with a composite liner system meeting the requirements for new CCR surface impoundments (§257.72)
- Incorporate design improvements

Following removal of all contaminants, FGD-A will be retrofitted by confirming the existing clay liner meets the requirements of §257.70(b) and placement of the following.

- 60-mil textured high density polyethylene (HDPE) geomembrane
- 1.5-foot thick protective cover.

In areas where the existing clay liner does not meet the requirements of §257.70(b) (i.e. is either not at least 2 feet thick or has a hydraulic conductivity exceeding 1 x $10^{-7}$ cm/s), additional clay liner will be placed and compacted to meet the thickness specification, the existing 2-foot clay liner will be removed and recompacted to meet the hydraulic conductivity specifications, or a geosynthetic clay liner (GCL) will be installed as the soil component of the composite liner system. This GCL / geomembrane composite liner will meet the requirements of §257.70(c).

## 1.2 General Responsibilities

OGSES is responsible for fully implementing this LQCP. The site manager (SM) or designated alternate shall be responsible for contracting a qualified Professional of Record (POR) prior to initiating liner and leachate collection system construction.

# 2.0 CLAY LINER EVALUATION

The existing liner system in FGD-A consists of a minimum 3-foot thick compacted clay layer with a maximum hydraulic conductivity of 1 x $10^{-7}$ cm/s. The CCR rules require that the soil component of the composite liner consist of a minimum 2-foot thick clay layer. Therefore, the upper nominal 1 foot of the existing clay liner will be removed. The actual thickness of clay removed will depend on the actual grades of the liner. Care shall be taken to minimize disturbance to the lower 2 feet of the clay liner.

## 2.1 Clay Liner Surface Preparation

The CCR within FGD-A will be removed to within 2 to 3 feet of the top of the existing clay liner prior to retrofit work. The remaining CCR and contaminated soils and sediments will be removed using dozers (or other means) and hauled to Ash Landfill 1 for disposal. The surface of the exposed existing clay liner will be visually inspected to confirm removal of all CCR.

Following removal of the upper portion of the existing clay liner, tube samples will be obtained from the lower 1.5 feet of the existing clay liner for testing in accordance with Table 1. In the event of a failing test, the backup sample will be tested. If the backup sample does not meet the project requirements, the failing area will be delineated by the POR. The failing area shall either be removed and replaced or covered with GCL as described in Section 3.2.5.

The upper 6 inches of the remaining clay liner will be scarified, moisture conditioned (if necessary) and recompacted using a padfoot roller followed by a smooth-drum roller to between 0 to 6% above optimum moisture content and compacted to a minimum of 95% of the maximum dry density as determined by the standard Proctor test (ASTM D698).

The standard Proctor curves from the 2008 clay liner construction are included as Appendix A. The Proctor curve used for determining the compaction criteria shall be selected based on a visual classification of the soil by the POR or his/her representative.

## 2.2 Construction Testing

Construction tests shall be performed in accordance with project-specific testing methods and subject to the minimum testing frequency shown in Table 1.

**Table 1: Clay Liner Construction Testing Requirements**

| Test Parameter | Testing Procedure | Frequency |
|---|---|---|
| In-place Moisture/Density | ASTM D6938, D2937, or D1556 | 1 per 8,000 ft$^2$/upper 6 inches |
| Percent Finer Than No. 200 Sieve | ASTM D1140 or D422 | 1 per 40,000 ft$^2$/ upper 6 inches |
| Atterberg Limits | ASTM D4318 | 1 per 100,000 ft$^2$ / lower 1.5 feet |
| Hydraulic Conductivity(1) | ASTM D5084 | |

Notes:

1. When sampling for hydraulic conductivity tests, two tube samples should be retrieved. One tube shall serve as the primary test sample. The second tube shall serve as the backup sample in case of damage or sample disturbance in the first tube.

## 2.3 Failing Tests

Sections of compacted clay liner that do not pass either the density or moisture requirements in the field shall be reworked and retested until the section in question does pass.

In the event of a failed hydraulic conductivity test, the POR will do following.

1. The test procedures and test sample shall be reviewed for inconsistencies in test procedures or flaws in the test sample. A review of the associated soil characteristic test and field density/moisture content tests shall be performed to confirm that the proper compaction criteria were used.
2. A permeability sample shall be prepared from the backup tube sample and an additional hydraulic conductivity test shall be performed on the backup sample.
3. If the backup sample provides an acceptable result, the results from the first sample will be disregarded. If the backup sample does not provide acceptable results, a review of the required compaction criteria will be performed to determine if the compaction criteria require revision.
4. Additional hydraulic conductivity test samples will be retrieved between the non-conforming location and the surrounding passing test locations. The results from these additional tests will be used to bound the area requiring rework. The area to be reworked will be bounded by passing hydraulic conductivity tests.
5. All reworked areas shall be tested and confirmed to satisfy the hydraulic conductivity criterion. The reporting of retests will clearly indicate the number and location of non-conforming test and subsequent retest.

Alternatively, the clay liner in the failing area will be covered with a GCL meeting the requirements in Section 3.

## 2.4 Clay Liner Perforations

When taking field densities and tube samples, all holes dug or created in the clay liner for density probes or samples must be backfilled with bentonite or a bentonite-rich soil material. This backfill will be tamped in the hole to remove pockets of air or loose soil, and to assure a tight compact seal.

## 2.5 Clay Liner Thickness Verification

The existing clay liner thickness shall be verified by comparing the top of clay liner elevation to the “Subgrade and Clay Liner Elevations” drawing prepared by SAM in 2008.

## 2.6 Care of Clay Liner

The integrity of the clay liner shall be maintained by moistening to prevent the material from desiccating. Conversely, the clay liner shall be kept free of standing water by adequately pumping after rainfall events. Damage caused by rain shall be repaired, and if the lift must be reworked, as determined by the POR, then appropriate retesting (including field moisture-density and permeability tests) shall be performed.

# 3.0 GEOSYNTHETIC CLAY LINER

This section presents general procedures, quality control testing requirements, and installation procedures for geosynthetic clay liner (GCL) construction. The GCL approved for use at the site consists of polymer-enhanced sodium bentonite encapsulated between two geotextile layers, needle-punched or stitched-bonded together. The geosynthetic clay liner shall be “Resistex U40” as manufactured by CETCO Lining Technologies; “BentoLiner CAR Plus” as manufactured by Solmax; or Engineer-approved equivalent

## 3.1 Pre-Installation Material Evaluation

### 3.1.1 Manufacturer’s Quality Control Certificates

Prior to the installation of the GCL, the manufacturer or installer shall provide the POR with quality control certificates signed by a responsible party employed by the manufacturer. Each quality control certificate shall include roll identification numbers, testing procedures, and results of quality control tests. The quality control tests shall be performed in accordance with project-specific testing methods and subject to the minimum testing frequency shown in Table 2. OGSES may require more frequent testing at their discretion.

The quality control testing may be performed in the manufacturing plant. The POR shall review the test results prior to accepting the GCL to ensure that the certified minimum properties meet the values presented in Table 2.

### 3.1.2 Compatibility Testing

Prior to installation of the GCL, the manufacturer or installer shall provide the POR with information showing that the material is compatible with liquids with chemistry similar to liquid obtained from an OGSES surface impoundment.

### 3.1.3 Conformance Testing

In addition to the manufacturer’s quality control certificates, samples of rolls of GCL will be obtained for conformance testing. The samples shall be tested by an independent third-party laboratory in accordance with Table 3. The POR shall review the test results to ensure that they meet the values presented in Table 2.

**Table 2: GCL QC Submittal Frequency & Material Specifications**

| **Property** | **Qualifier** | **Unit** | **Value** | **Test Method(1)** | **Frequency** |
|---|---|---|---|---|---|
| Fluid Loss | max. | ml | 18 | ASTM D5891 | 1 per 50 tons or every truck or railcar |
| Free Swell | min. | ml | 24 | ASTM D5890 | |
| **Geotextile** | | | | | |
| **Property** | **Qualifier** | **Unit** | **Value** | **Test Method(1)** | **Frequency** |
| Mass per Unit Area | Nominal | oz/yd$^2$ | 6 | ASTM D5261 | 1 per 200,000 ft$^2$ |
| Tensile Properties: | — | lb | — | ASTM D4632 | |
| **GCL Product** | | | | | |
| **Property** | **Qualifier** | **Unit** | **Value** | **Test Method(1)** | **Frequency** |

| | | | | | |
|---|---|---|---|---|---|
| Bentonite Mass | min. | lb/ft$^2$ | 0.75 | ASTM D5993 | 1 per 40,000 ft$^2$ |
| GCL Moisture Content | max. | % | 35 | ASTM D5993 | |
| Peel Strength | min. | lb/in | 5.0 | ASTM D6496 | |
| Grab Tensile Strength | min. | lb/in | 45 | ASTM D6768 | 1 per 200,000 ft$^2$ |
| Hydraulic Conductivity | max. | cm$^2$/s | 3 x 10$^{-9}$ | ASTM D5887 | 1 per week for each production line(2) |

Notes:
1. Updated test methods may be implemented based on a review by the POR.
2. Report last 20 test values, ending on production date of supplied GCL.
3. For those properties that do not indicate a value, the GCL material must meet the manufacturer's minimum specification.

**Table 3: GCL Conformance Test Schedule**

| Test | Test Method(1) | Frequency |
|---|---|---|
| Bentonite Mass/Unit Area | ASTM D5993 | Not less than 1 test per 100,000 ft$^2$ |
| Hydraulic Conductivity | ASTM D5887 | |

Notes:
1. Updated test methods may be implemented based on a review by the POR.

## 3.2 Installation Procedures

### 3.2.1 GCL Shipping and Storage

In order to prevent premature hydration, the GCL rolls shall be shipped in plastic wrapping that shall remain intact until material installation. Upon delivery of the GCL, storage and handling procedures shall be documented. The rolls will be stacked, stored, and handled in accordance with ASTM D5888 or manufacturer's recommendations.

### 3.2.2 GCL Subgrade Preparation

Surfaces to be lined should be smooth and free of all rocks greater than 0.75-inch diameter (or as recommended by the manufacturer), sharp/angular objects, sticks, roots, or debris of any kind. The surface should provide a firm, unyielding foundation for the GCL with no sudden, sharp, or abrupt changes or break in grade. The subgrade surface shall be prepared by rolling with a smooth-drum roller to minimize the roughness and press down protruding soil or rock particles prior to GCL deployment. Loose rocks and/or dry soil particles that could damage the GCL shall be removed. Excessive voids or dimples shall be filled with soil.

Standing water or excessive moisture on the subgrade will not be allowed. The subgrade shall be maintained in a smooth, uniform, and drained condition.

### 3.2.3 Anchor Trench Construction

The anchor trench shall be constructed according to the project plans, and the excavation and backfilling operations shall be documented. If the anchor trench is excavated in a clay material susceptible to desiccation, the amount of anchor trench open at any time should be minimized. The inside edge of the trench shall be

rounded to avoid stresses from sharp bends in the GCL. The GCL will not be placed into the anchor trench on top of any rocks greater than 0.75-inch diameter, sharp/angular objects, sticks, roots, or debris of any kind. The anchor trench shall be adequately drained to prevent ponding or hydration of the GCL while the trench is open. The anchor trench shall be backfilled and compacted according to the project plans ; however, backfilling shall be performed, at a minimum, with ordinary compaction as deemed suitable by the POR.

### 3.2.4 GCL Deployment

Equipment used to deploy GCL must not cause excessive rutting of the subgrade. Deployed GCL panels should contain no folds or excessive slack. Installation personnel must not smoke or wear damaging shoes on GCL. GCL should not be placed during excessive winds. In general, only low ground pressure rubber-tired support equipment approved by the POR may be allowed on the GCL. If the POR observes any potential damage done to the clay liner by the support equipment, use of the equipment will cease and the damage will be repaired. Generators, gasoline or solvent cans, tools, or supplies must not be stored directly on the GCL.

Panels should be overlapped and seamed, as recommended by the manufacturer. Augment seams with granular bentonite if recommended by the Geosynthetics Manufacturer to ensure seam integrity.

End-to-end seams on sideslopes should be kept to a minimum. If end-to-end seams on sideslopes are necessary (i.e., if the GCL roll lengths are insufficient to cover the entire slope length), a minimum overlap of 5 feet will be required and may be placed only in the lower half of the slope and must be staggered.

GCL deployment shall be limited to the amount that can be covered with the overlying geomembrane liner the same day. GCL deployment shall not be undertaken during precipitation or when there is an impending threat of precipitation.

Following deployment, the CQA monitor shall visually examine the entire surface of the GCL for even bentonite distribution, thin spots, or other panel defects. All defects will be recorded and repaired in accordance with this LQCP. The POR representative shall also verify the following:

- Proper overlap during deployment
- Seams between GCL panels are constructed per manufacturer’s recommendations
- Defects are patched and overlapped properly
- The bentonite has not become excessively hydrated

Excessively hydrated GCL shall be removed and replaced with new material. Geomembrane shall not be placed on hydrated GCL.

GCL panels shall be given an identification code, mapped, and logged to record relevant installation information.

### 3.2.5 GCL Placement Over Isolated Failing Compacted Clay

GCL may be used as an alternate liner over isolated areas where the hydraulic conductivity of the clay liner exceeds 1 x $10^{-7}$ cm/s. The GCL shall be extended a minimum of 24 inches beyond the failing area as determined by the POR. For areas 15-feet by 15-feet or smaller, a small notch measuring approximately 3 inches wide and 8 inches deep will be cut in the subgrade along the edge of the GCL. The GCL shall be trimmed to fit into the notch. The installer shall then compact a mixture consisting of one part bentonite to four parts soil by volume, blended dry, into the bottom half of the notch. The GCL shall then be inserted into the notch. The

installer shall then fill the remaining notch volume with bentonite or compact the mixture bentonite and soil into the remaining notch volume.

### 3.2.6 Penetrations and Placement Over Isolated Failing Compacted Clay

At penetrations or structures, a small notch measuring approximately 3 inches wide and 8 inches deep will be cut in the subgrade along the edge of the area the GCL will contact. The GCL shall be brought up to the appurtenance and trimmed to fit into the notch. The installer shall then compact a mixture of one part bentonite to four parts soil by volume, blended dry, into the bottom half of the notch. The GCL shall then be inserted into the notch. The installer shall then fill the remaining notch volume with bentonite or compact the mixture bentonite and soil into the remaining notch volume.

### 3.2.7 GCL Repairs

Torn or otherwise damaged geosynthetic facing must be patched with the same type of geosynthetic. The geosynthetic patch must extend at least 12 inches beyond the damaged area and must be heat bonded, or otherwise attached to the main GCL to avoid shifting during placement of overlying geosynthetics. If the GCL damage includes loss of bentonite, the patch must consist of full GCL extending at least 12 inches beyond the damaged area. Lapping procedures must be the same as specified for original laps of GCL panels.

### 3.2.8 GCL Protection

The overlying geosynthetics and soil layers shall be deployed in such a manner as to ensure that the GCL is not damaged. Textured geomembranes shall not be dragged across previously installed GCL. A smooth rubsheet shall be placed between the GCL and textured geomembrane to prevent damage. The rubsheet will be removed when the geomembrane is in position. Other methods may be employed at the POR's discretion.

To avoid local bentonite displacement, and the possible impact on the hydraulic performance of a GCL, the protective cover of suitable thickness should be placed over the geomembrane overlying the GCL as soon as practicable following completion of the geomembrane and leachate collection system construction.

# 4.0 GEOMEMBRANE LINER EVALUATION

This section presents general procedures, quality control testing requirements, and construction specifications for geomembrane liner construction.

The geomembrane will be a textured 60-mil high density polyethylene (HDPE) geomembrane.

## 4.1 Pre-installation Material Evaluation

### 4.1.1 Manufacturer's Quality Control Certificates

Prior to the installation of any geomembrane, the manufacturer or installer shall provide the POR with quality control certificates signed by a responsible party employed by the manufacturer. Each quality control certificate shall include roll identification numbers, testing procedures, and results of quality control tests. The quality control tests shall be performed in the manufacturing plant using the test methods and frequencies listed in the most recent version of the Geosynthetic Research Institute (GRI) test method GM13, “Test Methods, Test Properties and Testing Frequency for High Density Polyethylene (HDPE) Smooth and Textured Geomembranes,” included in Appendix B. . The owner may require more frequent testing at his/her discretion.

The POR shall review the test results prior to accepting the geomembrane to assure that the certified minimum properties meet the minimum values for smooth and textured geomembranes, as determined by the most recent GRI test method GM13, OGSES may require more frequent testing at their discretion.

The rolls delivered to the site shall be inventoried, recording the manufacturer's name and product identification, and the roll thickness, number, and dimensions. Manufacturer's certificates should be cross-referenced to rolls delivered on-site.

Resumes of the installer's supervisor(s) or Master Seamer(s) shall be obtained to verify that adequate seaming experience will be utilized on the project. The installer’s supervisor or Master Seamer shall have had experience totaling a minimum of 2,000,000 square feet of geomembrane installation.

Upon delivery of geosynthetic materials, storage and handling procedures shall also be documented. Rolls of geosynthetic materials shall be handled and stored in such a way as not to damage the material. Generally, rolls of geosynthetic materials should not be stacked more than four rolls high.

In addition to the manufacturer's quality control certificates, samples of the geomembrane will be obtained either at the manufacturing facility or upon delivery to the site for conformance testing. The test samples shall be obtained for conformance testing in accordance with the testing schedule shown in Table 4.

The POR shall review the test results to ensure that they meet the values presented in GRI GM13.

**Table 4: Geomembrane Conformance Test Schedule**

| TEST | METHOD(1) | FREQUENCY |
|---|---|---|
| Thickness (laboratory measurement) | ASTM D5994 (Textured) | Not less than 1 test per 100,000 ft$^2$ with not less than 1 per resin lot |
| Density | ASTM D1505 or D792 | |
| Carbon black content | ASTM D4218 | |

| TEST | METHOD(1) | FREQUENCY |
|---|---|---|
| Carbon black dispersion | ASTM D5596 | |
| Tensile properties | ASTM D6693, Type IV | |

Notes:
1. Updated ASTM or GRI methods may be implemented based on a review by the POR.

## 4.2 Installation Procedures

### 4.2.1 Geomembrane Liner Subgrade Preparation and Acceptance

Prior to geomembrane installation, the top of the clay liner shall be checked for irregularities, protrusions, sharp stones, stones larger than 3/8 inch in size, loose soil, and abrupt changes in grade. The clay liner surface shall be prepared by rolling with a smooth-drum roller to minimize the roughness and to press down protruding soil or rock particles prior to geomembrane deployment. Loose rocks and/or dry soil particles that could damage the geomembrane shall be removed. Excessive voids or dimples shall be filled in with a soil-bentonite mixture. The surface shall not exhibit excessive desiccation prior to geomembrane deployment. The geomembrane subgrade acceptance shall be documented.

### 4.2.2 Anchor Trench Construction

The anchor trench shall be constructed according to the project plans, and the excavation and backfilling operations shall be documented. If the anchor trench is excavated in a clay material susceptible to desiccation, the amount of anchor trench open at any time should be minimized. The inside edge of the trench shall be rounded to avoid stresses from sharp bends in the geomembrane. Excessive amounts of loose soil shall not be allowed underneath the geomembrane in the anchor trench, and the anchor trench shall be adequately drained to prevent ponding or softening of adjacent soils while the trench is open. The anchor trench shall be backfilled and compacted according to the project plans; however, backfilling shall be performed, at a minimum, with ordinary compaction as deemed suitable by the POR.

### 4.2.3 Geomembrane Deployment

The geomembrane shall be installed in direct and uniform contact with the compacted soil liner or GCL. The geomembrane shall not be placed during inclement weather, such as high winds or rain.

Geomembrane seaming should generally not take place when ambient temperatures are below 32 degrees Fahrenheit (°F), unless preheating is used. For extrusion welding, preheating will be required if the temperature is below 32°F. For fusion welding, preheating may be waived if the installer demonstrates that quality welds may be obtained without preheating. Seaming shall not be permitted at ambient temperatures above 104°F, unless the installer can demonstrate that seam quality is not compromised.

In general, only low ground pressure rubber-tired support equipment approved by the POR may be allowed on the geomembrane. If the POR observes any potential damage done to the liner by the support equipment, use of the equipment will cease and the damage will be repaired. Personnel working on the geomembrane shall not smoke, wear damaging shoes, or engage in any other activity likely to damage the geomembrane. Only those sections that are to be placed and seamed in one day should be unrolled. Panels left unseamed should be anchored with sandbags or other suitable weights. In general, seams should be oriented parallel to the line of maximum slope

(i.e., oriented up and down, not across the slope). In corners and odd-shaped geometric locations, the number of field seams should be minimized.

Panels should be overlapped, as recommended by the manufacturer, as appropriate for the type of seam welding to be performed; however, overlapping shall be no less than 2 inches. Field seaming shall only be performed by the method(s) approved by the manufacturer, either by extrusion welding or double-tracked fusion welding. No seaming shall take place without the installer's supervisor or Master Seamer and CQA monitor being present. Fishmouths, or wrinkles at the seam overlap, shall be cut along the ridge of the wrinkle to achieve a flat overlap. The cut shall be seamed and/or patched. Seams shall extend to the outside edge of panels placed in the anchor trench.

Panel layout and field seams shall be given an identification code, mapped, and logged to record relevant installation information. Inspection and testing records shall be logged as well as repair and retest data.

## 4.3 Installation Monitoring and Testing

### 4.3.1 Trial Seams

Each day prior to commencing field seaming, trial seams shall be made on pieces of geomembrane material to verify that conditions are adequate for production seaming. Trial seams shall be made at the beginning of each seaming period and shift (generally, at least twice each day) for each combination of production seaming machine and operator to be used that day. The trial test seam shall be at least 3 feet long by 1 foot wide (after seaming) with the seam centered lengthwise. Four 1-inch wide specimens shall be die-cut from the trial seam sample. Two specimens shall be tested in the field for shear and two for peel (test both inner and outer welds for dual track fusion welding) and shall be compared to the minimum seam strength requirements specified in the most current version of the GRI Test Method GM19, “Seam Strength and Related Properties of Thermally Bonded Polyolefin Geomembranes”. The current versions of the GRI test methods are included in Appendix B.

If any of the trial seam specimens fail, the entire trial seam operation shall be repeated. If an additional specimen fails during the second trial seam, the seaming machine and seamer shall not be used for seaming until the deficiencies are corrected and two consecutive successful trial seams are achieved. Additional trial seams shall be performed if frequent field seaming problems are experienced or if power to the seaming machines is interrupted sufficiently long to require rewarming.

### 4.3.2 Non-Destructive Testing

Continuous, non-destructive testing shall be performed on all seams by the installer. All leaks must be isolated and repaired by following the procedures described in this LQCP.

Air Pressure Testing – ASTM D5820. The ends of the air channel of the dual-track fusion weld must be sealed and pressured to approximately 30 pounds per square inch (psi), if possible. The air pump must then be shut off and the air pressure observed after 2 minutes. A loss of less than 3 psi is acceptable if it is determined that the air channel is not blocked between the sealed ends. A loss greater or equal to 3 psi indicates the presence of a seam leak that must then be isolated and repaired by following the procedures described in this LQCP. The POR or his/her qualified representative must observe and record all pressure gauge readings.

Vacuum-Box Testing – ASTM D5641. Apply a vacuum of approximately 4 to 8 psi to all extrusion welded seams that can be tested in this manner. The seam must be observed for leaks for at least 10 seconds while subjected to this vacuum. The POR or his/her qualified representative must observe 100% of this testing.

### 4.3.3 Destructive Seam Testing

Destructive samples shall be taken at a minimum frequency of one test location, selected randomly, within each 500 linear feet of seam length, inclusive of both primary longitudinal and cross seams, cap strips, and repairs 20 square feet or larger. Each test sample should be of sufficient length and 12 inches wide with the seam located in the middle. Test specimens, approximately 1 inch wide, shall be cut from both ends of the sample for field testing (peel and shear). The remaining sample should be cut into three parts (one for quality assurance laboratory testing, one for installer quality control laboratory testing, and one for archive storage to be maintained at a location selected by the owner).

The field tests shall be conducted on a certified calibrated tensiometer capable of maintaining a constant extension rate of 2 inches per minute. If one of the field test specimens from the ends of the destructive sample fails, then the seam will be considered to have failed, and repairs shall be initiated as described below. If both specimens pass, then a sample for laboratory testing will be sent to the quality assurance laboratory for testing in both peel and shear. Seam strengths for HDPE geomembranes shall meet the minimum values specified in the most current version of the GRI Test Method GM19 “Seam Strength and Related Properties of Thermally Bonded Polyolefin Geomembranes”, included in Appendix B.

Destructive test results for both field and laboratory tests shall include qualitative data, including the location of the failure and locus-of-break code, as described in ASTM D6392. Peel tests on double-tracked fusion welds shall be performed on both inside and outside tracks of the weld. Seam break classifications for extrusion and fusion welds are shown on Figures 1 and 2, respectively.

At a minimum, a destructive test must be done for each welding machine used for seaming or repairs. A sufficient amount of the seam must be removed to conduct field testing, independent laboratory testing, and archiving of enough material to retest the seam when necessary. Destructive seam testing locations shall be cap-stripped and the cap completely seamed by extrusion welding to the geomembrane. Capped sections shall be non-destructively tested. Additional destructive test samples may be taken if deemed necessary by the POR or his/her qualified representative.

Weld Acceptance Criteria: For HDPE seams, the minimum passing criteria for destructive seam testing are described in the GRI Test Method GM19. The POR must use the most current version of GM19 when evaluating welded seams.

Seam Failure Delineation: When a sample fails a destructive test, the installer shall trace the welding path to an intermediate location at least 10 feet in each direction, or a distance determined by the POR, from the point of the failed test and take 1-inch wide specimens for an additional set of field tests. If these additional samples pass the tests, then two laboratory destructive samples shall be taken adjacent to the intermediate locations or at locations determined by the POR or his/her representative. If these laboratory samples pass the tests, then the seam shall be repaired between these locations. If either sample fails, then the process shall be repeated to establish a zone where the seam should be repaired. All acceptable repaired seams shall be bounded by two locations from which samples passing laboratory destructive tests have been taken.

Seam Failure Repairs: Any portion of the geomembrane exhibiting a flaw or failing a destructive or non-destructive test shall be repaired. Repair methods may include spot welding (extrusion) for minor flaws and punctures; patches for larger holes and tears; capping for large lengths of failed seams or panel damage; and extrusion welding of outer flap to repair an inadequate fusion seam (less than 100-feet cumulative length) that has an exposed edge.

For any repair method, the following provisions shall be satisfied:

- Surfaces of the geomembrane that are to be repaired using extrusion methods shall be ground no more than one hour prior to the repair
- All surfaces shall be clean and dry at the time of repair
- Patches or caps shall extend at least 6 inches beyond the edge of the defect, and all corners of patches shall be rounded with a radius of approximately 3 inches
- All repairs shall be non-destructively tested, as previously described
- All seaming equipment, personnel, and operation procedures used in repair work shall meet the same requirements as for new seaming operations

The POR or his/her qualified representative shall observe all non-destructive testing of repairs and shall record the number of each repair, type, date, and test outcome. Repairs that pass the non-destructive tests shall be taken as an indication of an adequate repair. Repairs more than 150 feet long shall also be required to have a destructive test performed. Repairs that fail the initial retest shall be redone and retested until passing test results achieved. All work and testing of repairs shall be fully documented in a repair log.

When placing overlying material on the geomembrane, effort must be made to minimize wrinkle development. If possible, cover should be placed during the coolest weather available. Small wrinkles should be isolated and covered as quickly as possible to prevent their growth. In no case shall the geomembrane be allowed to fold over on itself.

## 5.0 ++ACCESS RAMP AND PROTECTIVE COVER LAYER

Design improvements to FGD-A include construction of an access ramp. The access ramp will be formed with 2.5H:1V sideslopes as indicated on the Drawings.

A 1.5-foot thick protective cover layer will be placed over the liner system on the floor of FGD-A Pond.

The access ramp, peninsula fill, and protective cover material will consist of soil or bottom ash supplied by OGSES. The installation of the access ramp and protective cover material will have continuous inspection by the POR or his/her qualified representative(s).

The access ramp and protective cover material does not require compaction control; however, it should be stable for construction traffic. Care shall be exercised in placement so as not to shift, wrinkle, or damage the underlying geosynthetic layers, and the placement methods shall be documented. Access ramp and protective cover material placement should be conducted at the coolest part of the day to minimize the development of wrinkles in the geosynthetic materials.

The access ramp and protective cover material shall be placed such that the top surface, while spreading, is at least 2 feet above the geosynthetic layers at all times unless low ground pressure dozers are used (i.e., track

pressure less than 5 psi). A greater thickness shall be maintained to support loaded hauling trucks and trailers and for turning areas. Drivers shall proceed with caution when on the overlying soil and prevent spinning of tires, quick stops, or sharp turns.

Access ramp fill material shall generally be placed in an upslope direction for sidewalls.

The required thickness of protective cover shall be verified by comparing the protective cover surface elevation to top of clay liner elevation shot at the points shown on “Subgrade and Clay Liner Elevations” drawing prepared by SAM in 2008.

# 6.0 DOCUMENTATION AND REPORTING

## 6.1 Liner Evaluation Reports

Upon completion of all required liner construction and evaluation, the POR shall prepare and submit a Liner Evaluation Report (LER) to the TCEQ. The LER shall be signed and sealed by the POR performing the evaluation.

The construction documentation provided in the LER will contain a narrative describing the conduct of work and testing programs required by the LQCP, "as-built" or record drawings, and appendices of field and laboratory data.

The construction documentation report will contain or discuss the following information at a minimum:

- For clay liners:
  - Pre-construction soil test results
  - Summary of construction material conformance tests results
  - Summary of field moisture-density control test methods and results
  - Summary of hydraulic conductivity test results
  - Clay liner construction practices for floor and sidewall sections
  - Placement and processing methods
  - Compaction methods, equipment type, compactor weight and foot length
  - Repair of failed and damaged lifts
  - Clay liner thickness verification
  - Post-construction care of clay liner

- GCL and Geomembrane:
  - Roll shipment and receipt information
  - Manufacturer’s quality control certificates and results
  - Conformance test sampling and test results

  - Subgrade acceptance
  - Anchor trench preparation and backfilling
  - Panel deployment, identification, and placement
  - Seam preparation, orientation
  - 100 percent visual inspection for defects, damage, etc.
- For Geomembrane
  - Trial seam tests for each combination of seaming equipment and personnel
  - Seaming methods, times, temperature, and equipment shutdowns and startups
  - Continuous 100 percent non-destructive seam testing, methods, criteria, and results
  - Destructive testing methods, criteria, and results
  - Repairs, including preparation and procedures, failure delineation, patch size and shape, and retesting
- Access ramp fill, and protective cover material placement procedures

The report shall also include pertinent record drawings including:

- As-built drawings showing the elevations of the clay liner surface to confirm its thickness
- As-built geomembrane panel layout drawings showing location of destructive test samples, patches, and repairs
- As-built drawings showing elevations of protective cover to confirm its thickness
- As-built drawings showing pipe locations at 50-foot intervals, and all fittings, turns, bends, etc.

# GRI Test Methods

*Geosynthetic Institute*
475 Kedron Avenue
Folsom, PA 19033-1208 USA
TEL (610) 522-8440
FAX (610) 522-8441

Revision 15: September 9, 2019
Revision schedule on pg. 11

**GRI - GM13 Standard Specification***

Standard Specification for

"Test Methods, Test Properties and Testing Frequency for
High Density Polyethylene (HDPE) Smooth and Textured Geomembranes" SM

This specification was developed by the Geosynthetic Research Institute (GRI), with the cooperation of the member organizations for general use by the public. It is completely optional in this regard and can be superseded by other existing or new specifications on the subject matter in whole or in part. Neither GRI, the Geosynthetic Institute, nor any of its related institutes, warrant or indemnifies any materials produced according to this specification either at this time or in the future.

1. Scope

1.1 This specification covers high density polyethylene (HDPE) geomembranes with a formulated sheet density of 0.940 g/ml, or higher, in the thickness range of 0.75 mm (30 mils) to 3.0 mm (120 mils). Both smooth and textured geomembrane surfaces are included.

1.2 This specification sets forth a set of minimum, physical, mechanical and chemical properties that must be met, or exceeded by the geomembrane being manufactured. In a few cases a range is specified.

1.3 In the context of quality systems and management, this specification represents manufacturing quality control (MQC).

Note 1: Manufacturing quality control represents those actions taken by a manufacturer to ensure that the product represents the stated objective and properties set forth in this specification.

1.4 This standard specification is intended to ensure good quality and performance of HDPE geomembranes in general applications, but is possibly not adequate for the complete specification in a specific situation. Additional tests, or more restrictive

*This GRI standard specification is developed by the Geosynthetic Research Institute through consultation and review by the member organizations. This specification will be reviewed at least every 2-years, or on an as-required basis. In this regard it is subject to change at any time. The most recent revision date is the effective version and it is kept current on the Institute's Website <<geosynthetic-institute.org>>.

**Copyright © 2017 Geosynthetic Institute - All Rights Reserved**

values for test indicated, may be necessary under conditions of a particular application.

Note 2: For information on installation techniques, users of this standard are referred to the geosynthetics literature, which is abundant on the subject.

2. Referenced Documents

2.1 ASTM Standards

D 792 Specific Gravity (Relative Density) and Density of Plastics by Displacement
D 1004 Test Method for Initial Tear Resistance of Plastics Film and Sheeting
D 1238 Test Method for Flow Rates of Thermoplastics by Extrusion Plastometer
D 1505 Test Method for Density of Plastics by the Density-Gradient Technique
D 1603 Test Method for Carbon Black in Olefin Plastics
D 3895 Test Method for Oxidative Induction Time of Polyolefins by Thermal Analysis
D 4218 Test Method for Determination of Carbon Black Content in Polyethylene Compounds by the Muffle-Furnace Technique
D 4833 Test Method for Index Puncture Resistance of Geotextiles, Geomembranes and Related Products
D 5199 Test Method for Measuring Nominal Thickness of Geotextiles and Geomembranes
D 5397 Procedure to Perform a Single Point Notched Constant Tensile Load – (SP-NCTL) Test: Appendix
D 5596 Test Method for Microscopic Evaluation of the Dispersion of Carbon Black in Polyolefin Geosynthetics
D 5721 Practice for Air-Oven Aging of Polyolefin Geomembranes
D 5885 Test method for Oxidative Induction Time of Polyolefin Geosynthetics by High Pressure Differential Scanning Calorimetry
D 5994 Test Method for Measuring the Core Thickness of Textured Geomembranes
D 6370 Standard Test Method for Rubber-Compositional Analysis by Thermogravimetry (TGA)
D 6693 Test Method for Determining Tensile Properties of Nonreinforced Polyethylene and Nonreinforced Flexible Polypropylene Geomembranes
D 7238 Test Method for Effect of Exposure of Unreinforced Polyolefin Geomembrane Using Fluorescent UV Condensation Apparatus
D 7466 Test Method for Measuring the Asperity Height of Textured Geomembranes

2.2 GRI Standards

GM10 Specification for the Stress Crack Resistance of Geomembrane Sheet

2.3 U. S. Environmental Protection Agency Technical Guidance Document "Quality Control Assurance and Quality Control for Waste Containment Facilities," EPA/600/R-93/182, September 1993, 305 pgs.

3. Definitions

Manufacturing Quality Control (MQC) - A planned system of inspections that is used to directly monitor and control the manufacture of a material which is factory originated. MQC is normally performed by the manufacturer of geosynthetic materials and is necessary to ensure minimum (or maximum) specified values in the manufactured product. MQC refers to measures taken by the manufacturer to determine compliance with the requirements for materials and workmanship as stated in certification documents and contract specifications.
ref. EPA/600/R-93/182

Manufacturing Quality Assurance (MQA) - A planned system of activities that provides assurance that the materials were constructed as specified in the certification documents and contract specifications. MQA includes manufacturing facility inspections, verifications, audits and evaluation of the raw materials (resins and additives) and geosynthetic products to assess the quality of the manufactured materials. MQA refers to measures taken by the MQA organization to determine if the manufacturer is in compliance with the product certification and contract specifications for the project.
ref. EPA/600/R-93/182

Formulation - The mixture of a unique combination of ingredients identified by type, properties and quantity. For HDPE polyethylene geomembranes, a formulation is defined as the exact percentages and types of resin(s), additives and carbon black.

Nominal - Representative value of a measurable property determined under a set of conditions, by which a product may be described. Abbreviated as nom. in Tables 1 and 2.

4. Material Classification and Formulation

4.1 This specification covers high density polyethylene geomembranes with a formulated sheet density of 0.940 g/ml, or higher. Density can be measured by ASTM D1505 or ASTM D792. If the latter, Method B is recommended.

4.2 The polyethylene resin from which the geomembrane is made will generally be in the density range of 0.932 g/ml or higher, and have a melt index value per ASTM D1238 of less than 1.0 g/10 min.

4.3 The resin shall be virgin material with no more than 10% rework. If rework is used, it must be a similar HDPE as the parent material.

4.4 No post consumer resin (PCR) of any type shall be added to the formulation.

5. Physical, Mechanical and Chemical Property Requirements

5.1 The geomembrane shall conform to the test property requirements prescribed in Tables 1 and 2. Table 1 is for smooth HDPE geomembranes and Table 2 is for single and double sided textured HDPE geomembranes. Each of the tables are given in English and SI (metric) units. The conversion from English to SI (metric) is soft.

Note 3: The tensile strength properties in this specification were originally based on ASTM D 638 which uses a laboratory testing temperature of 23°C ± 2°C. Since ASTM Committee D35 on Geosynthetics adopted ASTM D 6693 (in place of D 638), this GRI Specification followed accordingly. The difference is that D 6693 uses a testing temperature of 21°C ± 2°C. The numeric values of strength and elongation were not changed in this specification. If a dispute arises in this regard, the original temperature of 23°C ± 2°C should be utilized for testing purposes.

Note 4: There are several tests often included in other HDPE specifications which are omitted from this standard because they are outdated, irrelevant or generate information that is not necessary to evaluate on a routine MQC basis. The following tests have been purposely omitted:

- Volatile Loss
- Dimensional Stability
- Coeff. of Linear Expansion
- Resistance to Soil Burial
- Low Temperature Impact
- ESCR Test (D 1693)
- Wide Width Tensile
- Water Vapor Transmission
- Water Absorption
- Ozone Resistance
- Modulus of Elasticity
- Hydrostatic Resistance
- Tensile Impact
- Field Seam Strength
- Multi-Axial Burst
- Various Toxicity Tests

Note 5: There are several tests which are included in this standard (that are not customarily required in other HDPE specifications) because they are relevant and important in the context of current manufacturing processes. The following tests have been purposely added:

- Oxidative Induction Time
- Oven Aging
- Ultraviolet Resistance
- Asperity Height of Textured Sheet (see Note 6)

Note 6: The minimum average value of asperity height does not represent an expected value of interface shear strength. Shear strength associated with geomembranes is both site-specific and product-specific and should be determined by direct shear testing using ASTM D5321/ASTM D6243 as prescribed. This testing should be included in the particular site's CQA conformance testing protocol for the geosynthetic materials involved, or formally waived by the Design Engineer, with concurrence from the Owner prior to the deployment of the geosynthetic materials.

Note 7: There are other tests in this standard, focused on a particular property, which are updated to current standards. The following are in this category:

- Thickness of Textured Sheet
- Puncture Resistance
- Stress Crack Resistance
- Carbon Black Dispersion (In the viewing and subsequent quantitative interpretation of ASTM D 5596 only near spherical agglomerates shall be included in the assessment).

5.2 The values listed in the tables of this specification are to be interpreted according to the designated test method. In this respect they are neither minimum average roll values (MARV) nor maximum average roll values (MaxARV).

5.3 The properties of the HDPE geomembrane shall be tested at the minimum frequencies shown in Tables 1 and 2. If the specific manufacturer's quality control guide is more stringent and is certified accordingly, it must be followed in like manner.

Note 8: This specification is focused on manufacturing quality control (MQC). Conformance testing and manufacturing quality assurance (MQA) testing are at the discretion of the purchaser and/or quality assurance engineer, respectively.

6. Workmanship and Appearance

6.1 Smooth geomembrane shall have good appearance qualities. It shall be free from such defects that would affect the specified properties of the geomembrane.

6.2 Textured geomembrane shall generally have uniform texturing appearance. It shall be free from agglomerated texturing material and such defects that would affect the specified properties of the geomembrane.

6.3 General manufacturing procedures shall be performed in accordance with the manufacturer's internal quality control guide and/or documents.

7. MQC Sampling

7.1 Sampling shall be in accordance with the specific test methods listed in Tables 1 and 2. If no sampling protocol is stipulated in the particular test method, then test specimens shall be taken evenly spaced across the entire roll width.

7.2 The number of tests shall be in accordance with the appropriate test methods listed in Tables 1 and 2.

7.3 The average of the test results should be calculated per the particular standard cited and compared to the minimum value listed in these tables, hence the values listed are the minimum average values and are designated as "min. ave."

8. MQC Retest and Rejection

8.1 If the results of any test do not conform to the requirements of this specification, retesting to determine conformance or rejection should be done in accordance with the manufacturing protocol as set forth in the manufacturer's quality manual.

9. Packaging and Marketing

9.1 The geomembrane shall be rolled onto a substantial core or core segments and held firm by dedicated straps/slings, or other suitable means. The rolls must be adequate for safe transportation to the point of delivery, unless otherwise specified in the contract or order.

10. Certification

10.1 Upon request of the purchaser in the contract or order, a manufacturer's certification that the material was manufactured and tested in accordance with this specification, together with a report of the test results, shall be furnished at the time of shipment.

**ENGLISH UNITS**

# Table 1(a) – High Density Polyethylene (HDPE) Geomembrane -Smooth

| Properties | Test Method | Test Value | | | | | | | Testing Frequency (minimum) |
|---|---|---|---|---|---|---|---|---|---|

| Oxidative Induction Time (OIT) (min. ave.) *(5)* | | | | | | | | | 200,000 lb |
| (a) Standard OIT - min. | D 3895 | 100 | 100 | 100 | 100 | 100 | 100 | 100 | |
| — or — | | | | | | | | | |
| (b) High Pressure OIT - min. | D 5885 | 400 | 400 | 400 | 400 | 400 | 400 | 400 | |
| Oven Aging at 85°C *(5), (6)* | D 5721 | | | | | | | | |
| (a) Standard OIT (min. ave.) - % retained after 90 days | D 3895 | 55 | 55 | 55 | 55 | 55 | 55 | 55 | per each formulation |
| — or — | | | | | | | | | |
| (b) High Pressure OIT (min. ave.) - % retained after 90 days | D 5885 | 80 | 80 | 80 | 80 | 80 | 80 | 80 | |
| UV Resistance *(7)* | D 7238 | | | | | | | | |
| (a) Standard OIT (min. ave.) | D 3895 | N.R. *(8)* | N.R. *(8)* | N.R. *(8)* | N.R. *(8)* | N.R. *(8)* | N.R. *(8)* | N.R. *(8)* | per each formulation |
| — or — | | | | | | | | | |
| (b) High Pressure OIT (min. ave.) - % retained after 1600 hrs *(9)* | D 5885 | 50 | 50 | 50 | 50 | 50 | 50 | 50 | |

*(1)* Machine direction (MD) and cross machine direction (XMD) average values should be on the basis of 5 test specimens each direction.
Yield elongation is calculated using a gage length of 1.3 inches
Break elongation is calculated using a gage length of 2.0 in.

*(2)* The yield stress used to calculate the applied load for the SP-NCTL test should be the manufacturer's mean value via MQC testing.

*(3)* Other methods such as D 1603 (tube furnace) or D 6370 (TGA) are acceptable if an appropriate correlation to D 4218 (muffle furnace) can be established.

*(4)* Carbon black dispersion (only near spherical agglomerates) for 10 different views:
9 in Categories 1 or 2 and 1 in Category 3

*(5)* The manufacturer has the option to select either one of the OIT methods listed to evaluate the antioxidant content in the geomembrane.

*(6)* It is also recommended to evaluate samples at 30 and 60 days to compare with the 90 day response.

*(7)* The condition of the test should be 20 hr. UV cycle at 75°C followed by 4 hr. condensation at 60°C.

*(8)* Not recommended since the high temperature of the Std-OIT test produces an unrealistic result for some of the antioxidants in the UV exposed samples.

*(9)* UV resistance is based on percent retained value regardless of the original HP-OIT value.

**SI (METRIC) UNITS**

## Table 1(b) – High Density Polyethylene (HPDE) Geomembrane - Smooth

| Properties | Test Method | Test Value | | | | | | | Testing Frequency (minimum) |

*(1)* Machine direction (MD) and cross machine direction (XMD) average values should be on the basis of 5 test specimens each direction
Yield elongation is calculated using a gage length of 33 mm
Break elongation is calculated using a gage length of 50 mm

*(2)* The yield stress used to calculate the applied load for the SP-NCTL test should be the manufacturer's mean value via MQC testing.

*(3)* Other methods such as D 1603 (tube furnace) or D 6370 (TGA) are acceptable if an appropriate correlation to D 4218 (muffle furnace) can be established.

*(4)* Carbon black dispersion (only near spherical agglomerates) for 10 different views:
9 in Categories 1 or 2 and 1 in Category 3

*(5)* The manufacturer has the option to select either one of the OIT methods listed to evaluate the antioxidant content in the geomembrane.

*(6)* It is also recommended to evaluate samples at 30 and 60 days to compare with the 90 day response.

*(7)* The condition of the test should be 20 hr. UV cycle at 75°C followed by 4 hr. condensation at 60°C.

*(8)* Not recommended since the high temperature of the Std-OIT test produces an unrealistic result for some of the antioxidants in the UV exposed samples.

***(9)*** UV resistance is based on percent retained value regardless of the original HP-OIT value.

*(1)* Alternate the measurement side for double sided textured sheet

*(2)* Machine direction (MD) and cross machine direction (XMD) average values should be on the basis of 5 test specimens each direction.
Yield elongation is calculated using a gage length of 1.3 inches
Break elongation is calculated using a gage length of 2.0 inches

*(3)* SP-NCTL per ASTM D5397 Appendix, is not appropriate for testing geomembranes with textured or irregular rough surfaces. Test should be conducted on smooth edges of textured rolls or on smooth sheets made from the same formulation as being used for the textured sheet materials.
The yield stress used to calculate the applied load for the SP-NCTL test should be the manufacturer's mean value via MQC testing.

(4) Other methods such as D 1603 (tube furnace) or D 6370 (TGA) are acceptable if an appropriate correlation to D 4218 (muffle furnace) can be established.

(5) Carbon black dispersion (only near spherical agglomerates) for 10 different views:
9 in Categories 1 or 2 and 1 in Category 3

(6) The manufacturer has the option to select either one of the OIT methods listed to evaluate the antioxidant content in the geomembrane.

(7) It is also recommended to evaluate samples at 30 and 60 days to compare with the 90 day response.

(8) The condition of the test should be 20 hr. UV cycle at 75°C followed by 4 hr. condensation at 60°C.

(9) Not recommended since the high temperature of the Std-OIT test produces an unrealistic result for some of the antioxidants in the UV exposed samples.

(10) UV resistance is based on percent retained value regardless of the original HP-OIT value.

*(1)* Alternate the measurement side for double sided textured sheet

*(2)* Machine direction (MD) and cross machine direction (XMD) average values should be on the basis of 5 test specimens each direction.
Yield elongation is calculated using a gage length of 33 mm
Break elongation is calculated using a gage length of 50 mm

*(3)* The SP-NCTL test is not appropriate for testing geomembranes with textured or irregular rough surfaces. Test should be conducted on smooth edges of textured rolls or on smooth sheets made from the same formulation as being used for the textured sheet materials.
The yield stress used to calculate the applied load for the SP-NCTL test should be the manufacturer's mean value via MQC testing.

*(4)* Other methods such as D 1603 (tube furnace) or D 6370 (TGA) are acceptable if an appropriate correlation to D 4218 (muffle furnace) can be established.

*(5)* Carbon black dispersion (only near spherical agglomerates) for 10 different views:
9 in Categories 1 or 2 and 1 in Category 3

*(6)* The manufacturer has the option to select either one of the OIT methods listed to evaluate the antioxidant content in the geomembrane.

*(7)* It is also recommended to evaluate samples at 30 and 60 days to compare with the 90 day response.

*(8)* The condition of the test should be 20 hr. UV cycle at 75°C followed by 4 hr. condensation at 60°C.

*(9)* Not recommended since the high temperature of the Std-OIT test produces an unrealistic result for some of the antioxidants in the UV exposed samples.

*(10)* UV resistance is based on percent retained value regardless of the original HP-OIT value.

**Adoption and Revision Schedule**
**for**
**HDPE Specification per GRI-GM13**

"Test Methods, Test Properties, Testing Frequency for
High Density Polyethylene (HDPE) Smooth and Textured Geomembranes"

| | |
|---|---|
| Adopted: | June 17, 1997 |
| Revision 1: | November 20, 1998; changed CB dispersion from allowing 2 views to be in Category 3 to requiring all 10 views to be in Category 1 or 2. Also reduced UV percent retained from 60% to 50%. |
| Revision 2: | April 29, 1999: added to Note 5 after the listing of Carbon Black Dispersion the following: "(In the viewing and subsequent quantitative interpretation of ASTM D5596 only near spherical agglomerates shall be included in the assessment)" and to Note (4) in the property tables. |
| Revision 3: | June 28, 2000: added a new Section 5.2 that the numeric table values are neither MARV or MaxARV. They are to be interpreted per the the designated test method. |
| Revision 4: | December 13, 2000: added one Category 3 is allowed for carbon black dispersion. Also, unified terminology to "strength" and "elongation". |
| Revision 5: | May 15, 2003: Increased minimum acceptable stress crack resistance time from 200 hrs to 300 hrs. |
| Revision 6: | June 23, 2003: Adopted ASTM D 6693, in place of ASTM D 638, for tensile strength testing. Also, added Note 2. |
| Revision 7: | February 20, 2006: Added Note 6 on Asperity Height clarification with respect to shear strength. |
| Revision 8: | Removed recommended warranty from specification. |
| Revision 9: | June 1, 2009: Replaced GRI-GM12 test for asperity height of textured geomembranes with ASTM D 7466. |
| Revision 10 | April 11, 2011: Added alternative carbon black content test methods |
| Revision 11 | December 13, 2012: Replaced GRI-GM11 with the equivalent ASTM D 7238. |
| Revision 12 | November 14, 2014: Increased minimum acceptable stress crack resistance time from 300 to 500 hours. Also, increased asperity height of textured sheet from 10 to 16 mils (0.25 to 0.40 mm). |
| Revision 13 | November 4, 2015: Removed Footnote (1) on asperity height from tables. |
| Revision 14 | January 6, 2016: Removed Trouser Tear from Note 5. |
| Revision 15: | September 9, 2019: Editorial update to harmonize tables. |

**GRI Test Method GM19***

Standard Specification for

# Seam Strength and Related Properties of Thermally Bonded Polyolefin Geomembranes

This specification was developed by the Geosynthetic Research Institute (GRI), with the cooperation of the member organizations for general use by the public. It is completely optional in this regard and can be superseded by other existing or new specifications on the subject matter in whole or in part. Neither GRI, the Geosynthetic Institute, nor any of its related institutes, warrant or indemnifies any materials produced according to this specification either at this time or in the future.

## 1. Scope

1.1 This specification addresses the required seam strength and related properties of thermally bonded polyolefin geomembranes; in particular, high density polyethylene (HDPE), linear low density polyethylene both nonreinforced (LLDPE) and scrim reinforced (LLDPE-R) and flexible polypropylene both nonreinforced (fPP) and scrim reinforced (fPP-R).

1.2 Numeric values of seam strength and related properties are specified in both shear and peel modes.

Note 1: This specification does not address the test method details or specific testing procedures. It refers to the relevant ASTM test methods where applicable.

1.3 The thermal bonding methods focused upon are hot wedge (single and dual track) and extrusion fillet.

*This GRI standard is developed by the Geosynthetic Research Institute through consultation and review by the member organizations. This specification will be reviewed at least every 5-years, or on an as-required basis. In this regard it is subject to change at any time. The most recent revision date is the effective version.

**Copyright © 2002, 2003, 2005, 2013 Geosynthetic Institute**
**All rights reserved**

Note 2: Other acceptable, but less frequently used, methods of seaming are hot air and ultrasonic methods. They are inferred as being a subcategory of hot wedge seaming.

1.4 This specification does not suggest a specific distance between destructive seam samples to be taken in the field, i.e., the sampling interval. A separate GRI Standard Practice is focused on this issue, see GRI-GM29.

1.5 This specification is only applicable to laboratory testing.

1.6 This specification does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

## 3. Definition

3.1 Geomembrane, n – An essentially impermeable geosynthetic composed of one or more synthetic sheets used for the purpose of liquid, gas or solid containment.

3.2 Hot Wedge Seaming – A thermal technique which melts the two opposing geomembrane surfaces to be seamed by running a hot metal wedge or knife between them. Pressure is applied to the top or bottom geomembrane, or both, to form a continuous bond. Seams of this type can be made with dual bond tracks separated by a nonbonded gap. These seams are referred to as dual hot wedge seams or double-track seams.

3.3 Hot Air Seaming – This seaming technique introduces high-temperature air or gas between two geomembrane surfaces to facilitate localized surface melting. Pressure is applied to the top or bottom geomembrane, forcing together the two surfaces to form a continuous bond.

3.4 Ultrasonic Seaming - A thermal technique which melts the two opposing geomembrane surfaces to be seamed by running a ultrasonically vibrated metal wedge or knife between them. Pressure is applied to the top or bottom geomembrane, or both, to form a continuous bond. Some seams of this type are made with dual bond tracks separated by a nonbonded gap. These seams are referred to as dual-track seams or double-track seams.

3.5 Extrusion Fillet Seaming – This seaming technique involves extruding molten resin at the edge of an overlapped geomembrane on another to form a continuous bond. A depreciated method called “extrusion flat” seaming extrudes the molten resin between the two overlapped sheets. In all types of extrusion seaming the surfaces upon which the molten resin is applied must be suitably prepared, usually by a slight grinding or buffing.

## 4. Significance and Use

4.1 The various methods of field fabrication of seams in polyolefin geomembranes are covered in existing ASTM standards mentioned in the referenced document section. What is not covered in those documents is the numeric values of strength and related properties that the completed seam must meet, or exceed. This specification provides this information insofar as minimum, or maximum, property values are concerned when the field fabricated seams are sampled and laboratory tested in shear and peel. A separate GRI standard, GRI-GM29 (DRAFT), provides guidance as to the spacing that destructive samples should be taken in typical field installation projects.

## 5. Sample and Specimen Preparation

5.1 The spacing for taking field seam samples for destructive testing is provided in GRI-GM29 (DRAFT), a standard-of-practice. The process describes a progression from the most restrictive interval of 1 per 500 feet (1 per 150 m) to the complete use and reliance of the electrical leak location survey (ELLS) method. Intermediate between these extremes are variations depending upon the installers experience and performance.

5.2 The size of field seam samples is to be according to the referenced test method, e.g., ASTM D6392 or site-specific CQA plan.

5.3 The individual test specimens taken from the field seam samples are to be tested according to the referenced test method, i.e., ASTM D6392 for HDPE, LLDPE and fPP, and ASTM D751 (modified to a 150 mm + seam width gage length) for fPP-R. The specimens are to be conditioned prior to testing according to these same test methods and evaluated accordingly.

## 6. Assessment of Seam Test Results

6.1 HDPE seams – For HDPE seams (both smooth and textured), the strength of four out of five 1.0 inch (25 mm) wide strip specimens in shear should meet or exceed the values given in Tables 1(a) and 1(b). The fifth must meet or exceed 80% of the given values. In addition, five out five specimens should meet the shear percent elongation, calculated as follows, and exceed the values given in Tables 1(a) and 1(b):

$$E = \frac{L}{L_o}(100) \quad (1)$$

where

E = elongation (%)
L = extension at end of test (in. or mm)
$L_o$ = original average length (usually 1.0 in. or 25 mm)

Note 3: The assumed gage length is considered to be the unseamed sheet material on either side of the welded area. It generally will be 1.0 in. (25 mm) from the edge of the seam to the grip face.

For HDPE seams (both smooth and textured), the strength of four out of five 1.0 in. (25 mm) wide strip specimens tested in peel should meet or exceed the values given in Tables 1(a) and 1(b). The fifth must meet or exceed 80% of the given values.

In addition, the peel separation (or incursion) should not exceed the values given in Tables 1(a) and 1(b) for all five out of five specimens. The value shall be based on

the proportion of area of separated bond to the area of the original bonding as follows:

$$S = \frac{A}{A_o}(100) \qquad (2)$$

where

S = separation (%)
A = average area of separation, or incursion ($in^2$ or $mm^2$)
$A_0$ = original bonding area ($in^2$ or $mm^2$)

Note 4: The area of peel separation can occur in a number of nonuniform patterns across the seam width. The estimated dimensions of this separated area is visual and must be done with care and concern. The area must not include squeeze-out which is part of the welding process.

Regarding the locus-of-break patterns of the different seaming methods in shear and peel, the following are unacceptable break codes per their description in ASTM D6392 (in this regard, SIP is an acceptable break code);

Hot Wedge: AD and AD-Brk > 25%
Extrusion Fillet: AD1, AD2
Exception: AD-WLD (unless strength is achieved)

Note 5: Separation-in-plane (SIP) is a locus-of-break where the failure surface propagates within one of the seamed sheets during destructive testing (usually in the peel mode). It is not merely a surface skin effect producing a few ductile fibrils (sometimes called ductile drawdown). SIP is acceptable if the required strength, shear elongation and peel separation criteria are met.

In this regard, five out of five specimens shall result in acceptable break patterns.

6.2 LLDPE seams – For LLDPE seams (smooth, textured and scrim reinforced), the strength of four out of five 1.0 in. (25 mm) wide strip specimens in shear should meet or exceed the values given in Tables 2(a) through 2(d). The fifth must meet or exceed 80% of the given values. Note that the unreinforced specimens are 1.0 in. (25 mm) wide strips and the scrim reinforced specimens are 4.0 in. (100 mm) wide grab tests. In addition, the shear percent elongation, calculated as follows, should exceed the values given in Tables 2(a) through 2(d). All five out of five should meet the shear elongation requirement.

$$E = \frac{L}{L_o}(100) \qquad (1)$$

where
E = elongation (%)
L = extension at end of test (in. or mm)
$L_o$ = original average length (usually 1.0 in. or 25 mm)

Note 3 (Repeated): The assumed gage length is considered to be the unseamed sheet material on either side of the welded area. It generally will be 1.0 in. (25 mm) from the edge of the seam to the grip face.

Shear elongation is not relevant to scrim reinforced geomembranes and as such is listed as "not applicable" in Tables 2 (c) and (d).

For LLDPE seams (smooth, textured and scrim reinforced), the strength of four out of five 1.0 in. (25 mm) wide strip specimens tested in peel should meet or exceed the values given in Tables 2(a) through 2(d). The fifth must meet or exceed 80% of the given values.

In addition, the peel separation (or incursion) should not exceed the values given in Tables 2(a) through 2(d). All five out of five specimens shall meet the peel separation value. The value shall be based on the proportion of area of separated bond to the area of the original bonding as follows:

$$S = \frac{A}{A_o}(100) \qquad (2)$$

where

S = separation (%)
A = average depth of separation, or incursion ($in.^2$ or $mm^2$)
$A_0$ = original bonding distance ($in.^2$ or $mm^2$)

Note 4 (Repeated): The area of peel separation can occur in a number of nonuniform patterns across the seam width. The estimated dimensions of this separated area is visual and must be done with care and concern. The area must not include squeeze-out which is part of the welding process.

Regarding the locus-of-break patterns of the different seaming methods in shear and peel, the following are unacceptable break codes per their description in ASTM D6392 (in this regard, SIP is an acceptable break code);

Hot Wedge: AD and AD-Brk > 25%
Extrusion Fillet: AD1, AD2
Exception: AD-WLD (unless strength is achieved)

Note 5 (Repeated): Separation-in-plane (SIP) is a locus-of-break where the failure surface propagates within one of the seamed sheets during destructive testing (usually in the peel mode). It is not merely a surface skin effect producing a few ductile fibrils (sometimes called ductile drawdown). SIP is acceptable if the required strength, shear elongation and peel separation criteria are met.

In this regard, five out of five specimens shall result in acceptable break patterns.

6.3 fPP Seams – For fPP seams (both nonreinforced and scrim reinforced), the strength of four out of five specimens in shear should meet or exceed the values given in Tables 3(a) and 3(b). The fifth must meet or exceed 80% of the given values. Note that the unreinforced specimens are 1.0 in. (25 mm) wide strips and the scrim reinforced specimens are 4.0 in. (100 mm) wide grab tests. In addition, the shear percent elongation on the unreinforced specimens, calculated as follows, should exceed the values given in Tables 3(a) and 3(b). All five out of five specimens should meet the shear elongation requirement.

$$E = \frac{L}{L_o}(100) \quad (1)$$

where
E = elongation (%)
L = extension at end of test (in. or mm)
$L_o$ = original gauge length (usually 1.0 in. or 25 mm)

Note 3 (Repeated): The assumed gage length is considered to be the unseamed sheet material on either side of the welded area. It generally will be 1.0 in. (25 mm) from the edge of the seam to the grip face.

Shear elongation is not relevant to scrim reinforced geomembranes and as such is listed as "not applicable" in Tables 3(a) and 3(b).

For fPP seams (both nonreinforced and scrim reinforced), the strength of four out of five specimens in peel should meet or exceed the values given in Tables 3(a) and 3(b). The fifth must meet or exceed 80% of the given values. Note that the unreinforced specimens are 1.0 in. (25 mm) wide strips and the scrim reinforced specimens are grab tests. In addition, the peel percent separation (or incursion) should not exceed the values given in Tables 3(a) and 3(b). All five out of five specimens should meet the peel separation value. The values should be based on the proportion of area of separated bond to the area of the original bonding as follows.

$$S = \frac{A}{A_o}(100) \quad (2)$$

where

S = separation in (%)
A = average depth of separation, or incursion (in.$^2$ or mm$^2$)
$A_o$ = original bonding distance (in.$^2$ or mm$^2$)

Note 4 (Repeated): The area of peel separation can occur in a number of nonuniform patterns across the seam width. The estimated dimensions of this separated area is visual and must be done with care and concern. The area must not include squeeze-out which is part of the welding process.

Regarding the locus-of-break patterns of the different seaming methods in shear and peel, the following are unacceptable break codes per their description in ASTM D6392 (in this regard, SIP is an acceptable break code);

Hot Wedge: AD and AD-Brk > 25%
Extrusion Fillet: AD1, AD2
Exception: AD-WLD (unless strength is achieved)

Note 5 (Repeated): Separation-in-plane (SIP) is a locus-of-break where the failure surface propagates within one of the seamed sheets during destructive testing (usually in the peel mode). It is not merely a surface skin effect producing a few ductile fibrils (sometimes called ductile drawdown). SIP is acceptable if the required strength, shear elongation and peel separation criteria are met.

In this regard, five out of five specimens shall result in acceptable break patterns.

## 7. Retest and Rejection

7.1 If the results of the testing of a sample do not conform to the requirements of this specification, retesting to determine conformance or rejection should be done in accordance with the construction quality control or construction quality assurance plan for the particular site under construction.

## 8. Certification

8.1 Upon request of the construction quality assurance officer or certification engineer, an installer's certification that the geomembrane was installed and tested in accordance with this specification, together with a report of the test results, shall be furnished at the completion of the installation.

Table 1(a) – Seam Strength and Related Properties of Thermally Bonded **Smooth and Textured** High Density Polyethylene (HDPE) Geomembranes **(English Units)**

| Geomembrane Nominal Thickness | 30 mils | 40 mils | 50 mils | 60 mils | 80 mils | 100 mils | 120 mils |
|---|---|---|---|---|---|---|---|
| Hot Wedge Seams[1] | | | | | | | |
| shear strength[2], lb/in. | 57 | 80 | 100 | 120 | 160 | 200 | 240 |
| shear elongation at break[3], % | 50 | 50 | 50 | 50 | 50 | 50 | 50 |
| peel strength[2], lb/in. | 45 | 60 | 76 | 91 | 121 | 151 | 181 |
| peel separation, % | 25 | 25 | 25 | 25 | 25 | 25 | 25 |
| Extrusion Fillet Seams | | | | | | | |
| shear strength[2], lb/in. | 57 | 80 | 100 | 120 | 160 | 200 | 240 |
| shear elongation at break[3], % | 50 | 50 | 50 | 50 | 50 | 50 | 50 |
| peel strength[2], lb/in. | 39 | 52 | 65 | 78 | 104 | 130 | 156 |
| peel separation, % | 25 | 25 | 25 | 25 | 25 | 25 | 25 |

Notes for Tables 1(a) and 1(b):

1. Also for hot air and ultrasonic seaming methods
2. Value listed for shear and peel strengths are for 4 out of 5 test specimens; the 5th specimen can be as low as 80% of the listed values
3. Elongation measurements should be omitted for field testing

Table 1(b) – Seam Strength and Related Properties of Thermally Bonded **Smooth and Textured** High Density Polyethylene (HDPE) Geomembranes **(S.I. Units)**

| Geomembrane Nominal Thickness | 0.75 mm | 1.0 mm | 1.25 mm | 1.5 mm | 2.0 mm | 2.5 mm | 3.0 mm |

**Adoption and Revision Schedule**
**for**
**Seam Specification per GRI-GM19**

"Seam Strength and Related Properties of Thermally Bonded Polyolefin Geomembranes"

Adopted: February 18, 2002

Revision 1: May 15, 2003; Increased selected shear and peel test requirements, per the following:

| Material | Test | Seam Type | Current GM19 | Proposed GM19 | Difference |
|---|---|---|---|---|---|
| HDPE | Shear | Hot Wedge | 95% yield | 95% yield | no change |
| | | Extrusion | 95% yield | 95% yield | no change |
| | Peel | Hot Wedge | 62% yield | 72% yield | 16% increase |
| | | Extrusion | 62% yield | 62% yield | no change |
| LLDPE | Shear | Hot Wedge | 1300 psi break | 1500 psi break | 15% increase |
| | | Extrusion | 1300 psi break | 1500 psi break | 15% increase |
| | Peel | Hot Wedge | 1100 psi break | 1250 psi break | 14% increase |
| | | Extrusion | 1100 psi break | 1100 psi break | no change |

Revision 2: January 28, 2005; added Note 6 (in three locations) stating that incursion is measured on an area basis and not depth as in ASTM D6392.

Revision 3: June 4, 2010; Removed Note 6 on peel incursion since ASTM D6392 (2008) now uses area of incursion whereas previously they used linear length of incursion. Thus ASTM is now in agreement with GM19 in this regard.

Revision 4: November 15, 2010; Added Note 6 (in three locations) stating what separation-in-plane (SIP) is, and is not, and that it is acceptable if the required strength, shear elongation and peel separation criteria are met.

Revision 5: July 12, 2011; AD1 and AD2 breaks are now unacceptable even if strength is achieved.

Revision 6: October 3, 2011; Added LLDPE-R to the various geomembrane types, in particular, Tables 2(c) and 2(d) and made editorial changes.

Revision 7: November 3, 2013; clarified issues of 4 out of 5 passing strength and 5 out of 5 passing locus-of-break, shear elongation and peel separation.

Revision 8: February 12, 2015; upgraded standards and terminology

| Description of Work |
|---|
| **Safety:**<br>• Daily safety incidences (total for project): 0 (0)<br>• Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.<br>• The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:<br>1. Work plan for the day<br>2. Equipment to be used.<br><br>**Water Management**<br>• Oak Grove Steam Electric Station received approximately 0.5" of rain in the morning. Rain stopped at approximately 0900.<br>• MSI placed pumps in low spots on the pond floor to have water removed from FGD-A Pond (See Photo 1).<br>• Daily load count for the water truck (4,000 gal): 0<br>• Due to morning rain events, water truck was not needed for the day.<br><br>**Construction Activities:**<br>• MSI installed silt fence around FGD-A Pond.<br>• MSI continued to remove unsuitable clay material from pond floor and side slopes (See Photo 2).<br>• See Progress Map on page 4 for approximate area where unsuitable material has been removed.<br><br>**Surveying Activities:**<br>• Not applicable. |

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | MSI used to haul excavated material |
| Volvo Haul Truck | 2 | A40G | MSI used to haul excavated material |
| Komatsu Haul Truck | 1 | HM-400 | MSI used to haul excavated material |
| Volvo Trackhoe | 1 | EC350E | MSI used to cut material |
| CAT Bulldozer | 2 | D6 | MSI used to cut material |
| Water Truck | 1 | 4,000 Gal | MSI used for dust control |
| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (0)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Water from previous rain event (October 27, 2021) continues to be pumped out of the pond.
- Daily load count for the water truck (4,000 gal): 10
- MSI used the 4,000 gal water truck for dust control around FGD-A Pond.

**Construction Activities:**

- MSI continued to remove the access ramp located on the southwestern side slope of FGD-A Pond.
- MSI began removing CCR and unsuitable clay material for the southern corner of the pond. (See Photo 1)
- After all available water was pumped out, MSI mixed in dry material with the remaining ponded water to have all water removed from the pond area.
- CAT D6 bulldozer and Volvo trackhoe were used to remove CCR on southern slope, west of peninsula.(See Photo 2)
- See Progress Map on page 4 for approximate area where unsuitable material has been removed.

**Surveying Activities:**

- Not applicable.

|---|

**Safety:**

- Daily safety incidences (total for project): 0 (0)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 5
- MSI used 4,000 gal water truck for dust control around FGD-A Pond and to hydrate structural fill.

**Construction Activities:**

- MSI used the Volvo trackhoe to load structural fill into haul trucks. (See Photo 1)
- MSI haul trucks placed structural fill on FGD-A Pond floor and used CAT D6 bulldozer to spread material. (See Photos 2 and 3)
- MSI used CAT sheeps foot roller to compact material.
- Structural fill was only placed in areas that were already determined to have been over excavated.
- See Progress Map on page 5 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- Jeremy Davis was on site to survey FGD-A Pond and borrow area. (See Photo 4)
- Survey will determine all areas below clay liner elevations and volume of structural fill available in borrow area. Results to be provided by November 9, 2021.

## Description of Work

**Safety:**

- Daily safety incidences (total for project): 0 (0)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 2
- MSI used 4,000 gal water truck for dust control around FGD-A Pond and to hydrate structural fill.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI haul trucks continued to place structural fill on FGD-A Pond floor and used CAT D6 bulldozer to spread material. Structural fill has been placed west and north of the peninsula. (See Photos 1 and 2)
- MSI continued to use CAT sheeps foot roller to compact material.
- 9 passing density tests were taken.
- 18" shelby tubes were collected from the bottom 18 inches of existing clay liner and shipped via FedEx.
- Structural fill was only placed in areas that were already determined to have been over excavated.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- No surveying activities today.
- Survey scheduled for Friday, November 12th, to survey the remainder of the borrow area.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI haul trucks continued to place structural fill on FGD-A Pond floor and used CAT D6 bulldozer to spread material. Structural fill has been placed north and west of the peninsula. (See Photo 1)
- MSI continued to use CAT sheeps foot roller to compact material.
- 7 passing density tests were taken.
- Structural fill was only placed in areas that were already determined to have been over excavated.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- No surveying activities today.
- Survey scheduled for Friday, November 12th, to survey the remainder of the borrow area.

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | MSI used to haul structural fill |
| Volvo Haul Truck | 2 | A40G | MSI used to haul structural fill |
| Volvo Trackhoe | 1 | EC350E | MSI used trackhoe to load structural fill from borrow area |
| CAT Bulldozer | 2 | D6 | MSI used to spread structural fill in over excavated areas<br>GPS bulldozer down for repairs |
| Water Truck | 1 | 4,000 Gal | MSI used for dust control and hydrate structural fill |
| CAT Sheeps Foot Roller | 1 | CP56 | Used to compact structural fill |
| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (0)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 3
- MSI used 4,000 gal water truck for dust control around FGD-A Pond and to hydrate structural fill.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI haul trucks continued to place structural fill on FGD-A Pond floor and used CAT D6 bulldozer to spread material. Structural fill has been placed north and west of the peninsula. (See Photos 1 and 2)
- MSI continued to use CAT sheeps foot roller to compact material.
- 6 passing density tests were taken.
- Structural fill was only placed in areas that were already determined to have been over excavated.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- Jeremy Davis was on site to survey the entire borrow area.

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | Not used today |
| Volvo Haul Truck | 2 | A40G | MSI used to haul structural fill |
| Volvo Trackhoe | 1 | EC350E | MSI used trackhoe to load structural fill from borrow area |
| CAT Bulldozer | 2 | D6 | MSI used 1 GPS bulldozer to spread structural fill in over excavated areas |
| Water Truck | 1 | 4,000 Gal | MSI used for dust control and hydrate structural fill |
| CAT Sheeps Foot Roller | 1 | CP56 | Used to compact structural fill.<br>Demobilized toady at 1100. |
| Volvo Sheeps Foot Roller | 1 | SD115B | Mobilized today at 1100. Used to compact structural fill on side slopes. |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (0)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 4
- MSI used 4,000 gal water truck for dust control around FGD-A Pond and to hydrate structural fill.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI haul trucks placed structural fill on FGD-A Pond northern and western floor and used CAT D6 bulldozer to spread material. (See Photo 1)
- MSI continued to construct the peninsula ramp with structural fill. (See Photo 2)
- MSI continued to use CAT sheeps foot roller to compact material.
- 18 passing density tests were taken on the structural fill.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.
- A Volvo Sheeps Foot Compactor was mobilized on site today at 1100. Due to the grade of the side slopes, the CAT compactor was not able to travel up the slopes.
- CAT compactor was demobilized from site at 1100.

**Surveying Activities:**

- No surveying activities.

## Description of Work

**Safety:**

- Daily safety incidences (total for project): 1 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- At approximately 1:00 PM an accident involving the Volvo trackhoe occurred causing the trackhoe to turn on its side.
    1. Oak Grove Control Room was promptly notified.
    2. MSI and Luminant safety personnel arrived on site to conduct an on going investigation.

**Water Management**

- Daily load count for the water truck (4,000 gal): 3
- MSI used 4,000 gal water truck for dust control around FGD-A Pond and to hydrate structural fill.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI placed structural fill on the western side slope of the pond.
- MSI used the CAT D6 bulldozer to spread material.
- MSI used the Volvo trackhoe and CAT D6 bulldozer to excavate the existing peninsula ramp.
- Existing peninsula ramp was completely excavated. (See Photos 1 and 2)
- Volvo haul trucks were used to haul unsuitable material into the landfill.
- MSI continued to use CAT sheeps foot roller to compact material.
- Placement and compaction of structural fill is estimated to be complete by December 1, 2021.
- 2 passing density tests were taken on the structural fill.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- No surveying activities.

|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- 4,000 gal water truck was not used today.

**Construction Activities:**

- MSI installed the silt fence between FGD-A/B Pond embankment for crossover pipeline. (See Photo 1)
- MSI used the CAD D6 bulldozer to begin excavation of the FGD-A/B Pond embankment. (See Photo 2)
- MSI demobilized the Volvo Trackhoe (EC350E) from site today.
- SCS obtained a bucket of soil to be used to backfill the FGD-A/B embankment and shipped via FedEx for preconstruction testing. Results expected by December 6, 2021.
- See map on page 4 for project progress.

**Surveying Activities:**

- No surveying activities.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- 4,000 gal water truck was not used today.

**Construction Activities:**

- MSI continues placing structural fill on W Peninsula.
- MSI is using the CAT D6 GPS dozer to spread material. Also using the Volvo excavator to process material on peninsula.
- MSI is using the Volvo sheeps foot to compact material on the peninsula.
- SCS continued density testing with passing results.
- See map on page 4 for project progress.

**Surveying Activities:**

- No surveying activities.

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | Not used today |
| Volvo Haul Truck | 2 | A40G | Used 1 truck to haul structural fill |
| Genie Forklift | 1 | GTH 844 | Not used today |
| CAT GPS Bulldozer | 1 | D6 | Used to spread structural fill |
| Water Truck | 1 | 4,000 Gal | Not used today |
| Volvo Sheeps Foot Roller | 1 | SD115B | Used to compact structural fill |
| Volvo Excavator | 1 | EC 480 | Used to load structural fill |
| | | | |
| | | | |
| | | | |

## Description of Work

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- 4,000 gal water truck was not used today.

**Construction Activities:**

- MSI continued placing structural fill on the west peninsula.
- MSI is using the Volvo excavator to load structural fill at the borrow area. Hauling material to the FGD-A pond.
- MSI is spreading material with the CAT D6 GPS dozer.
- MSI is using the Volvo sheeps foot to compact structural fill.
- MSI fine graded the East/South slope.
- SCS continued density testing with passing results.
- See map on page 4 for project progress.

**Surveying Activities:**

- No surveying activities.

## Materials Delivered

| **General Contractor (GC):** Mine Service, Inc. | **GC Superintendent:** Jeff Hoffman | |
| **Onsite Specialty Contractors:** | | |
| **CQA Technician:** Danny Rennicks | **Certifying Engineer:** J. Roy Murray, P.E. | |
| **Weather:** AM: 68°, cloudy, light winds approx. 10 mph<br>PM: 77°, cloudy, light winds approx.. 10 mph | **Rain Gauge Reading: 0.5" from 12/14 – 12/15** | |

**Distribution List:** Luminant: Melvin Mejia, Casey Hayes, Garrett Foreman, Erick Dieperink, Eric Hassell, Razen Thomas, Darren Thomas, Charles Koudelka, Tim Newman, Eric Chavers, Gary Spicer, Vic Modeer, Matt Ballance, Nick Cambiano, Robert Moeller SCS: J.Roy Murray, Sam Franco, Danny Rennicks Mine Service, Inc.: Eddie Noak; Scott Mendoza, Jeff Hoffman Ray W. Davis Consulting Engineers, Inc.: Jeremy Davis

## Onsite Personnel

| Name | Position | Arrival | Departure | Hours |
|---|---|---|---|---|
| Danny Rennicks | CQA Technician | 0600 | 1700 | 11 |
| | | | | |

## Project-Related Visitors *(does not include contractors or subcontractors)*

| Name | Position |
|---|---|
| Melvin Mejia | Luminant Project Manager |
| J.Roy Murray | CQA Project Director |
| Sam Franco | CQA Project Manager |
| Pat Kamesch | Lone Star Lining Project Manager |

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | Not used today |
| Volvo Haul Truck | 2 | A40G | Used to haul structural fill |
| Genie Forklift | 1 | GTH 844 | Not used today |
| CAT GPS Bulldozer | 1 | D6 | Used to grade structural fill |
| Water Truck | 1 | 4,000 Gal | Not used today |
| Volvo Sheeps Foot Roller | 1 | SD115B | Used to compact structural fill |
| Volvo Excavator | 1 | EC 480 | Used to load structural fill into haul trucks |
| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- Due to recent rain events, water truck was not needed.
- Site received 0.5" of rain over 12/14 – 12/15.

**Construction Activities:**

- MSI continued to use the Volvo trackhoe to load structural fill into haul trucks.
- MSI backfilled the area where the existing plant inlet pipes were located (southern corner).
- MSI used the CAT D6 bulldozer to spread material.
- MSI continued to use CAT sheeps foot roller to compact material.
- 4 passing density tests were taken on the structural fill.
- See Progress Map on page 4 for approximate areas where structural fill has been placed.

**Surveying Activities:**

- Survey is scheduled for December 20, 2021 for subgrade certification.

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- MSI did not use water truck today.

**Construction Activities:**

- 2 trucks of GCL were delivered to Oak Grove today. (See Photo 1)
- MSI used the Genie forklift to remove GCL rolls from the shipping trucks and place them on the geosynthetic pad. (See Photo 2)
- All GCL rolls were covered with a plastic tarp with sandbags placed around the edges of the tarp.
- MSI used the CAT D6 bulldozer to mix in dry material on the pond floor.
- See Progress Map on page 4 for approximate areas where structural fill has been placed and certified areas.

**Surveying Activities:**

- Due to wet conditions, pond floor was unable to be surveyed.
- Survey is tentatively scheduled for Tuesday, January 4, 2022.

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| Volvo Haul Truck | 1 | A45G | Not used today |
| Volvo Haul Truck | 2 | A40G | Temporarily off site |
| Genie Forklift | 1 | GTH 844 | Not used today |
| CAT GPS Bulldozer | 1 | D6 | Not used today |
| Water Truck | 1 | 4,000 Gal | Not used today |
| Volvo Sheeps Foot Roller | 1 | SD115B | Not used today |
| Volvo Excavator | 1 | EC 480 | Not used today |
| CAT Mini Excavator | 1 | 304E | Used to excavate anchor trench |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- MSI did not use water truck today.

**Construction Activities:**

- Oak Grove received light amount of rain overnight.
- MSI continued to excavate the liner anchor trench along the peninsula of the pond. (See Photo 1)
- Lone Star on site; pond subgrade was too wet for deployment.
- Began raining again at 10:00 AM.
- See Progress Map on page 4 for certified areas.

**Surveying Activities:**

- No surveying activities.

    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- Lone Star Lining crew also participated in the morning JSA conducted by MSI.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- MSI did not use water truck today.

**Construction Activities:**

- MSI used the CAT D6 bulldozer to fine grade the eastern pond floor.
- MSI used the Volvo trackhoe to remove excess material from the eastern pond floor.
- MSI continued to excavate the liner anchor trench along the western side slope
- MSI continued to roll subgrade with CAT smooth drum.
- Lone Star began GCL and HDPE deployment on the south slope, west of the peninsula, and continued in west direction. (See Photos 1 and 2)
- Lone Star welded all available HDPE seams. (See Photo 3)
- All deployed GCL was covered by HDPE.
- All HDPE edges were lined with sandbags to protect against wind. (See Photo 4)
- See Progress Map on page 5 for approximate area of geosynthetic installation.

**Surveying Activities:**

- No surveying activities.

## Description of Work

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- Lone Star Lining crew also participated in the morning JSA conducted by MSI.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- MSI did not use water truck today.

**Construction Activities:**

- Oak Grove received ¼" of rain overnight.
- Pond floor was too wet for equipment.
- No GCL was compromised from the rain event.
- Pond subgrade was too wet for geosynthetic deployment in the morning.
- Lone Star began air testing all fusion welded seams and completed all available repairs.
- Destructive Samples (DS) were collected and shipped to TRI via FedEx.
- In the afternoon, Lone Star continued deployment of GCL and HDPE across the FGD-A/B crossover embankment and continued across the northern slope in the east direction. (See Photos 1 and 2)
- Lone Star welded all available HDPE seams.
- All deployed GCL was covered by HDPE.
- All HDPE edges were lined with sandbags to protect against wind.
- See Progress Map on page 4 for approximate area and quantities of geosynthetic installation.

**Surveying Activities:**

- Geomembrane panel location survey scheduled for Friday, January 14th.

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- Lone Star Lining crew also participated in the morning JSA conducted by MSI.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0
- MSI did not use water truck today.

**Construction Activities:**

- MSI used the Volvo smooth drum roller to roll the floor subgrade for geomembrane deployment.
- MRGeo (revetment installer) began staging the HYDROTEX fabric forms around FGD-A Pond.
- Lone Star continued deployment of GCL and HDPE across the western slope and northern pond floor.
- Lone Star welded all available HDPE seams.
- All deployed GCL was covered by HDPE.
- All HDPE edges were lined with sandbags to protect against wind.
- See Progress Map on page 4 for approximate area and quantities of geosynthetic installation.

**Surveying Activities:**

- Jeremy Davis on site to survey deployed geomembrane

| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- Lone Star Lining crew also participated in the morning JSA conducted by MSI.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MRGeo (revetment installer) continued pumping concrete into the HYDROTEX fabric forms along the western side slope.
- Due to high winds, no GCL or HDPE deployment took place today.
- Due to low temperatures, no welding was allowed to take place until 10:00 AM.
- Lone Star continued to work on repairs and vacuum testing all repairs.
- 17 HDPE destructive were shipped to the testing lab for delivery on January 21st.
- See Progress Map on page 4 for approximate area and quantities of geosynthetic and revetment installation.

**Surveying Activities:**

- No surveying activities today.

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- Lone Star Lining crew also participated in the morning JSA conducted by MSI.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MRGeo (revetment installer) continued to deploy HYDROTEX fabric forms along the northern slope and southwestern corner of FGD-A Pond.
- MRGeo also continued to pump concrete into the HYDROTEX fabric forms.
- MSI continues to pump water out of FGD-A Pond.
- Lone Star completed all remaining air tests, repairs, and vacuum tests.
- Lone Star placed remaining GCL material into cocoons.
- Lone Star disposed of all trash in and around FGD-A Pond.
- See Progress Map on page 5 for approximate area and quantities of geosynthetic and revetment installation.

**Surveying Activities:**

- Geomembrane panel survey scheduled for Friday, January 28th.

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE
- At approximately 0930, a concrete truck got stuck near the entrance ramp to FGD-A Pond. MSI was able to successfully remove the truck. (See Photo 1)
- At approximately 1600, a Boral haul truck got stuck at the bottom of the peninsula ramp. MSI was able to successfully remove the truck from the pond. (See Photo 2)
- Additional JSA's were conducted after each vehicle was removed.
- Luminant engineering and plant personnel was immediately contacted and kept up to date.

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MSI continued pumping water out of FGD-A Pond into FGD-B pond.
- MR Geo continued to pump concrete into the HYDROTEX fabric forms on the northern slope. (See Photo 3)
    - 5 concrete trucks were used today.
- Boral continued to haul bottom ash to FGD-A Pond.
    - 1 load of bottom ash was hauled and placed in the pond.
- MSI continued to use the CAT D6 bulldozer to spread the bottom ash on the pond floor.

**Surveying Activities:**

- No surveying activities today.

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MSI continued pumping water out of FGD-A Pond into FGD-B pond.
- MR Geo continued to deploy HYDROTEX fabric form panels along the eastern slope. (See Photo 1)
- MR Geo continued to pump concrete into the HYDROTEX fabric forms on the eastern slope. (See Photo 2)
    - 13 concrete trucks were used today.
- Boral continued to haul bottom ash to FGD-A Pond. (See Photo 3)
    - 30 load of bottom ash was hauled and placed in the pond.
- MSI continued to use the CAT D6 bulldozer to spread the bottom ash on the pond floor. (See Photo 4)
- See Progress Map on page 5 for approximate areas of protective cover placement and revetment installation.

**Surveying Activities:**

- No surveying activities today.

| CAT GPS Bulldozer | 1 | D6 | Used to spread protective cover |
| Volvo Sheeps Foot Compactor | 1 | SD115B | Not used today |
| Genie Forklift | 2 | GTH-844 | Not used today |
| Bobcat Skid Steer | 1 | 595 | Used by railroad tracks |
| Case Excavator | 1 | CX210D | Used to move/list pipe |
| Manitou | 1 | MTA-1055 | Used to move pipe |
| | | | |
| | | | |
| | | | |
| | | | |

## Description of Work

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MSI continued pumping water out of FGD-A Pond into FGD-B pond.
- MSI continues to place and weld pipes for the pond inlets. (See Photo 1)
- MR Geo continues to deploy HYDROTEX fabric panels on the east slope of the peninsula.
- MR Geo continues to pump concrete into the HYDROTEX fabric panels on the east slope of the peninsula. (See Photo 2)
    - 12 concrete trucks were used today.
- Boral continued to haul bottom ash to FGD-A Pond. (See Photo 3)
    - 32 load of bottom ash was hauled and placed in the pond.
- MSI continued to use the CAT D6 bulldozer to spread the bottom ash on the pond floor. (See Photo 3)
- See Progress Map on page 5 for approximate areas of protective cover placement and revetment installation.

**Surveying Activities:**

- No surveying activities today.

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| CAT GPS Bulldozer | 1 | D6 | Used to spread protective cover |
| Volvo Sheeps Foot Compactor | 1 | SD115B | Not used today |
| Bobcat Skid Steer | 1 | 595 | Not used today |
| Case Excavator | 1 | CX210D | Used to move pipe materials |
| Manitou Forklift | 1 | MTA-1055 | Not used today |
| Genie Forklift | 1 | GTH-844 | Used to move pipe materials |
| | | | |
| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MSI continued pumping water out of FGD-A Pond into FGD-B pond.
- MR Geo on site to deploy HYDROTEX fabric forms on the north end of the peninsula. (See Photo 1)
    - No pumping of concrete took place.
- MSI continues to place and weld pond inlet pipes. (See Photo 2)
- MSI began installation of the FGD-A/B crossover pipeline on the pond floor. (See Photo 3)
- Boral continued to haul bottom ash to FGD-A Pond. (See Photo 4)
    - 10 loads of bottom ash was hauled and placed in the pond.
- MSI continued to use the CAT D6 bulldozer to spread the bottom ash on the pond floor. (See Photo 4)
- See Progress Map on page 5 for approximate areas of protective cover placement and revetment installation.

**Surveying Activities:**

- Survey for protective cover quantities and top of revetment points scheduled for Wednesday, March 2nd.

## Equipment List

| Description | Qty. | Model No. | Comments |
|---|---|---|---|
| CAT GPS Bulldozer | 1 | D6 | Used to spread protective cover |
| Volvo Sheeps Foot Compactor | 1 | SD115B | Not used today |
| Bobcat Skid Steer | 1 | 595 | Used to remove revetment concrete debris |
| Case Excavator | 1 | CX210D | Used to move pipe materials |
| Manitou Forklift | 1 | MTA-1055 | Not used today |
| Genie Forklift | 1 | GTH-844 | Used to move pipe materials |
| | | | |
| | | | |
| | | | |
| | | | |

| Description of Work |
|---|

**Safety:**

- Daily safety incidences (total for project): 0 (1)
- Before accessing the site, per Vistra's on site COVID-19 policy, all on site employees were cleared to work after passing the temperature scan and screening questions.
- The morning Job Safety Analysis (JSA) was conducted by Jeff Hoffman of MSI. Topics discussed included the following:
    1. Work plan for the day
    2. Equipment to be used.
    3. Social distancing
    4. Proper PPE

**Water Management**

- Daily load count for the water truck (4,000 gal): 0

**Construction Activities:**

- MSI continued pumping water out of FGD-A Pond into FGD-B pond.
- MR Geo on site to remove concrete debris from revetment installation. (See Photo 1)
- MSI continued welding FGD-A drain line and inlet pipes. (See Photo 2)
- Concrete forms were installed around the FGD-A to pump station riser and A/B crossover pipe. (See Photo 3)
- Boral continued to haul bottom ash to FGD-A Pond. (See Photo 4)
    - 4 loads of bottom ash was hauled and placed in the pond.
- MSI continued to use the CAT D6 bulldozer to spread the bottom ash on the pond floor.
- See Progress Map on page 5 for approximate areas of protective cover placement and revetment installation.

**Surveying Activities:**

- Survey for protective cover quantities and top of revetment points has been re-scheduled for Friday, March 4th.

## Certificates of Completion

**SCS Engineers**

***Certificate of Completion***

---

**Status of Certificate: Partial** _____ **Final** ✓

Client: Luminant Project Name: FGD-A Pond Retrofit

Date: 3/8/22 Project No. 16221045.00

**Description of Work:** Completion of pond cleanout, structural fill compaction, clay liner compaction, and placement of protective cover

I hereby state the the above identified work is complete and has been installed as per the contract documents and/or the approved CQA plan.

**CONTRACTOR REPRESENTATIVE**

Signature: _____ Date: 03/09/2022

Name (print) Eddie Noak

Title: Vice President - Project Director

Representing: Mine Service, Inc.

I hereby state that the above identified work has been inspected and that it is has been installed as per the contract documents and or/the approved CQA plan. I further state that all required field and laboratory testing has been completed and the results have been deemed acceptable by the CQA Firm. The work described above is suitable for its intended use.

**CQA REPRESENTATIVE**

Signature: Samuel Franco Date: 3/8/22

Name (print) Samuel Franco

Title: Project Professional

Representing: SCS Engineers

## PRODUCT CERTIFICATIONS

PROJECT NAME:
CUSTOMER P.O.: 22121-CETCO1
ORDER NUMBER: 55056648
PREPARED FOR: LONE STAR LINING COMPANY

The GCL Manufactured for the above-referenced order number is certified to meet the values listed in the tables below:

### GCL PROPERTY SPECIFICATIONS FOR RESISTEX® U40 DN9

| Test Method | Test Method Property | Test Frequency | Certified Value |
|---|---|---|---|
| ASTM D6243 | GCL Hydrated Internal Shear Strength | 1/Project | 500 - psf |
| ASTM D6496 | GCL Peel Strength | 40,000 sq ft (4,000 sq m) | 5.0 - lbs/in |
| ASTM D5890 | Bentonite Free Swell | 1 per 50 Tons | 24 - ml |
| ASTM D6768 | GCL Grab Strength | 200,000 sq ft (20,000 sq m) | 50 - lbs/in |
| ASTM D5891 | Bentonite Fluid Loss | 1 per 50 Tons | 18 - ml |
| ASTM D5993 | Bentonite Mass/Area | 40,000 sq ft (4,000 sq m) | .75 - lbs/sq ft |
| ASTM D5887 | GCL-Hydraulic Conductivity | 1/Lot | 3x10-9 - cm/s |
| ASTM D5887 | GCL-Index Flux | 1/Lot | 1x10-8 - m3/m2/s |

All tensile testing is in the machine direction using ASTM D 6768. All peel strength testing is performed using ASTM D 6496. An "*" indicates non-standard testing, frequency, or certified value .

### NEEDLE DETECTION AND REMOVAL PROCEDURE

CETCO® hereby affirms that all Bentomat® geosynthetic clay liner material manufactured for this project is continually passed under a magnet for needle removal and then screened with a metal detection device. CETCO® certifies Bentomat® to be essentially free of broken needless and fragments of needles that would negatively affect the performance of the final product.

Sincerely,

NICHOLLS, RYAN J
Quality Assurance Coordinator
CETCO® Lovell Plant

## GCL MANUFACTURING QUALITY CONTROL TEST DATA

The following rolls in GCL certification package number 55056648 have been tested in our production facility lab.

| Product | Lot# Tested | Roll# Tested | Mass Area | Grab Strength | Peel Strength | | | |
|---|---|---|---|---|---|---|---|---|
| | | ASTM Test Method: | ASTM D5993 | ASTM D6768 | ASTM D6496 | | | |
| | | Required Value: | .75 - lbs/sq ft | 50 - lbs/in | 5.0 - lbs/in | | | |
| RESISTEX® U40 DN9 | LL-19-2021 | 1 | .92 | 106.8 | 13.3 | | | |
| RESISTEX® U40 DN9 | LL-19-2021 | 19 | .97 | 106.8 | 19 | | | |
| RESISTEX® U40 DN9 | LL-19-2021 | 37 | .96 | 106.8 | 13.5 | | | |

## BENTONITE CLAY CERTIFICATION

The Bentonite Clay used to produce package 55056648 was tested in our production facility lab and yielded the following results.

| Clay Lot # | Moist | Swell | Fluid Loss |
|---|---|---|---|
| ASTM Test Method: | ASTM D2216 | ASTM D5890 | ASTM D5891 |
| Required Value: | 12 - % | 24 - ml | 18 - ml |
| L050421A | 11.27 | 60 | 7.6 |
| L050421B | 11.2 | 64 | 7.4 |

## GCL MANUFACTURING QUALITY CONTROL TEST DATA

The following rolls in GCL certification package number 55063182 have been tested in our production facility lab.

| Product | Lot# Tested | Roll# Tested | Mass Area | Grab Strength | Peel Strength | | | |
|---|---|---|---|---|---|---|---|---|
| ASTM Test Method: | | | ASTM D5993 | ASTM D6768 | ASTM D6496 | | | |
| Required Value: | | | .75 - lbs/sq ft | 50 - lbs/in | 5 - lbs/in | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 67 | .82 | 116.8 | 9.9 | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 85 | .8 | 116.8 | 7.7 | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 103 | .85 | 116.8 | 11.6 | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 121 | .85 | 116.8 | 11 | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 139 | .9 | 116.8 | 14 | | | |
| RESISTEX® U40 DN9 | LL-48-2021 | 157 | .9 | 135.1 | 12.4 | | | |

## BENTONITE CLAY CERTIFICATION

The Bentonite Clay used to produce package 55063182 was tested in our production facility lab and yielded the following results.

| Clay Lot # | Moist | Swell | Fluid Loss |
|---|---|---|---|
| ASTM Test Method: | ASTM D2216 | ASTM D5890 | ASTM D5891 |
| Required Value: | 12 - % | 24 - ml | 18 - ml |
| L113021B | 9.82 | 62 | 8 |
| L113021C | 10.88 | 64 | 6.8 |
| L113021D | 10.63 | 61 | 7.8 |

Kent-

Sorry for the delay. I just received this from our Lab:

We have made 4 "lots" of the product during development. Below are the data sets for testing against the standardized leachates. We see perms of <5x10-9 cm/sec, and some <1x10-9 cm/sec.

| Sample ID | Additive | Permeant Type | Permeant pH | Permeant Electrical Conductivity (µS/cm) | Permeant Ionic Strength by ICP (M) | Flux (m3/m2/sec) | Hydraulic Conductivity (cm/sec) |
|---|---|---|---|---|---|---|---|
| 19GCL012-12 | Resistex U40 | 0.03 M CaCl2 | 6.3 | 6150 | 0.09 | 1.46E-09 | 5.66E-10 |

Kent-

Since the Resistex U40 is a new (latest) generation polymer modified GCL, we don't have 20 previous production week perm tests with this product. We can provide our last 20 perm tests on our standard GCL materials, however, the standard GCLs are specified to have perms values less than 5x10-9 cm/sec not 3x10-9 cm/sec.

Hi Kent,

The perm result for the GCL for Oak Grove meets the required value. However, as stated in the Liner Quality Control Plan, the hydraulic conductivity test results should include the last 20 test values, ending on production date of the supplied GCL, see page 7 of the attached LQCP.

Can you have CETCO include the last 20 perm tests as part of their submittal?

Let me know if you have any comments or questions.

Thanks,

Samuel Franco, P.E.

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the ***final*** laboratory report for the Conformance testing of one (1) Resistex U40 DN9 GCL sample.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **June 7, 2021**

**REFERENCE TRI JOB NO.:** G210469

**DATE RECEIVED:** May 26, 2021

**SAMPLED BY:** TRI-CA at CETCO, WY

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI CONTROL NUMBER* |
|---|---|
| R#2 L#LL-19-2021 | 156082 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D5993 | Mass Per Unit Area |
| 2. ASTM D5084 | Hydraulic Conductivity |

**TEST RESULTS:** The test results are summarized in the attached Table 1.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,
**TRI Environmental, Inc. - California**

It shall be noted that the samples tested are believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Retained conformance samples are disposed of after one (1) month.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the ***final*** laboratory report for the Conformance testing of three (3) 60mil HDPE Double Sided Textured geomembrane samples.

**PROJECT NAME:** Oak Grove Steam Electric Station

DATE REPORTED: **June 3, 2021**

**REFERENCE TRI JOB NO.:** G210468

**DATE RECEIVED:** May 26, 2021

**SAMPLED BY:** TRI-CA at SOLMAX, TX

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI CONTROL NUMBER* |
|---|---|
| R#0102-200397 L#D661L3PL3B | 156078 |
| R#0102-200647 L#21C1073 | 156079 |
| R#0102-200662 L#20J1245 | 156081 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D5994 | Thickness |
| 2. ASTM D1505 | Density |
| 3. ASTM D6693 (Type IV) | Tensile Strength |
| 4. ASTM D4218 | Carbon Content Muffle |
| 5. ASTM D5596 | Carbon Black Dispersion |

**TEST RESULTS:** The test results are summarized in the attached Tables 1 to 3.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,
**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the samples tested are believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Retained conformance samples are disposed of after one (1) month.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

Samuel Franco
***SCS ENGINEERS***
12651 Briar Forest Dr., Suite 205
Houston, TX 770077

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the ***final*** laboratory report for the Conformance testing of three (3) 60mil HDPE Double Sided Textured geomembrane samples.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **June 4, 2021**

**REFERENCE TRI JOB NO.:** G210477

**DATE RECEIVED:** May 27, 2021

**SAMPLED BY:** TRI-CA at SOLMAX, TX

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI CONTROL NUMBER* |
|---|---|
| R#104197182 L#19J1008 | 156113 |
| R#105197550 L#19J1007 | 156114 |
| R#108203110 L#19G1020 | 156115 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D5994 | Thickness |
| 2. ASTM D1505 | Density |
| 3. ASTM D6693 (Type IV) | Tensile Strength |
| 4. ASTM D4218 | Carbon Content Muffle |
| 5. ASTM D5596 | Carbon Black Dispersion |

**TEST RESULTS:** The test results are summarized in the attached Tables 1 to 3.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,
**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the samples tested are believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Retained conformance samples are disposed of after one (1) month.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

Houston, TX 770077

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the ***final*** laboratory report for the Conformance testing of four (4) 60mil HDPE Double Sided Textured geomembrane samples.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **June 3, 2021**

**REFERENCE TRI JOB NO.:** G210467

**DATE RECEIVED:** May 26, 2021

**SAMPLED BY:** TRI-CA at SOLMAX, TX

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI CONTROL NUMBER* |
|---|---|
| R#0102-198266 L#20C1308 | 156074 |
| R#0102-199418 L#20E1328 | 156075 |
| R#0102-199430 L#20E1327 | 156076 |
| R#0102-200273 L#20J1249 | 156077 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D5994 | Thickness |
| 2. ASTM D1505 | Density |
| 3. ASTM D6693 (Type IV) | Tensile Strength |
| 4. ASTM D4218 | Carbon Content Muffle |
| 5. ASTM D5596 | Carbon Black Dispersion |

**TEST RESULTS:** The test results are summarized in the attached Tables 1 to 4.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,
**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the samples tested are believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Retained conformance samples are disposed of after one (1) month.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

Dear Mrs. Herman:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

| | |
|---|---|
| Project: | **Martin Lake CCR Impoundment Reline East Ash Pond** |
| TRI Job Reference Number: | 66814 |
| Material(s) Tested: | Six, Solmax 60 mil Textured HDPE Geomembrane(s) |
| Test(s) Requested: | Thickness (ASTM D 5994)<br>Density (ASTM D 1505)<br>Carbon Black Content (ASTM D 4218)<br>Carbon Dispersion (ASTM D 5596)<br>Tensile Properties (ASTM D 6693)<br>Puncture Strength (ASTM D 4833)<br>Tear Resistance (ASTM D 1004) |

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Mansukh Patel
Laboratory Manager
Geosynthetic Services Division

Greetings

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs.
TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

| | |
|---|---|
| Project: | **US Ecology Cell 51 Phase II Liner System Const** |
| TRI Job Reference Number: | 62022 |
| Material(s) Tested: | One, Solmax 60 mil Smooth HDPE Geomembrane |
| Test(s) Requested: | Thickness (ASTM D 5199)<br>Density (ASTM D 1505)<br>Carbon Black Content (ASTM D 1603, mod.)<br>Carbon Dispersion (ASTM D 5596)<br>Tensile Properties (ASTM D 6693)<br>Puncture Strength (ASTM D 4833)<br>Tear Resistance (ASTM D 1004) |

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Checked by Zahirul

**Bill To:**

**<= Same (P.O. # 306-778)**

Dear Mr. Islam:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

| | |
|---|---|
| Project: | **Us Ecology Texas Cell 51 Phase 2** |
| TRI Job Reference Number: | 61963 |
| Material(s) Tested: | Four, Solmax 60 mil HDPE Textured Geomembrane |
| Test(s) Requested: | Thickness (ASTM D 5994)<br>Density (ASTM D 1505)<br>Carbon Black Content (ASTM D 1603, mod.)<br>Carbon Dispersion (ASTM D 5596)<br>Tensile Properties (ASTM D 6693)<br>Puncture Strength (ASTM D 4833)<br>Tear Resistance (ASTM D 1004) |

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Mansukh Patel
Technical Director
Geosynthetic Services Division

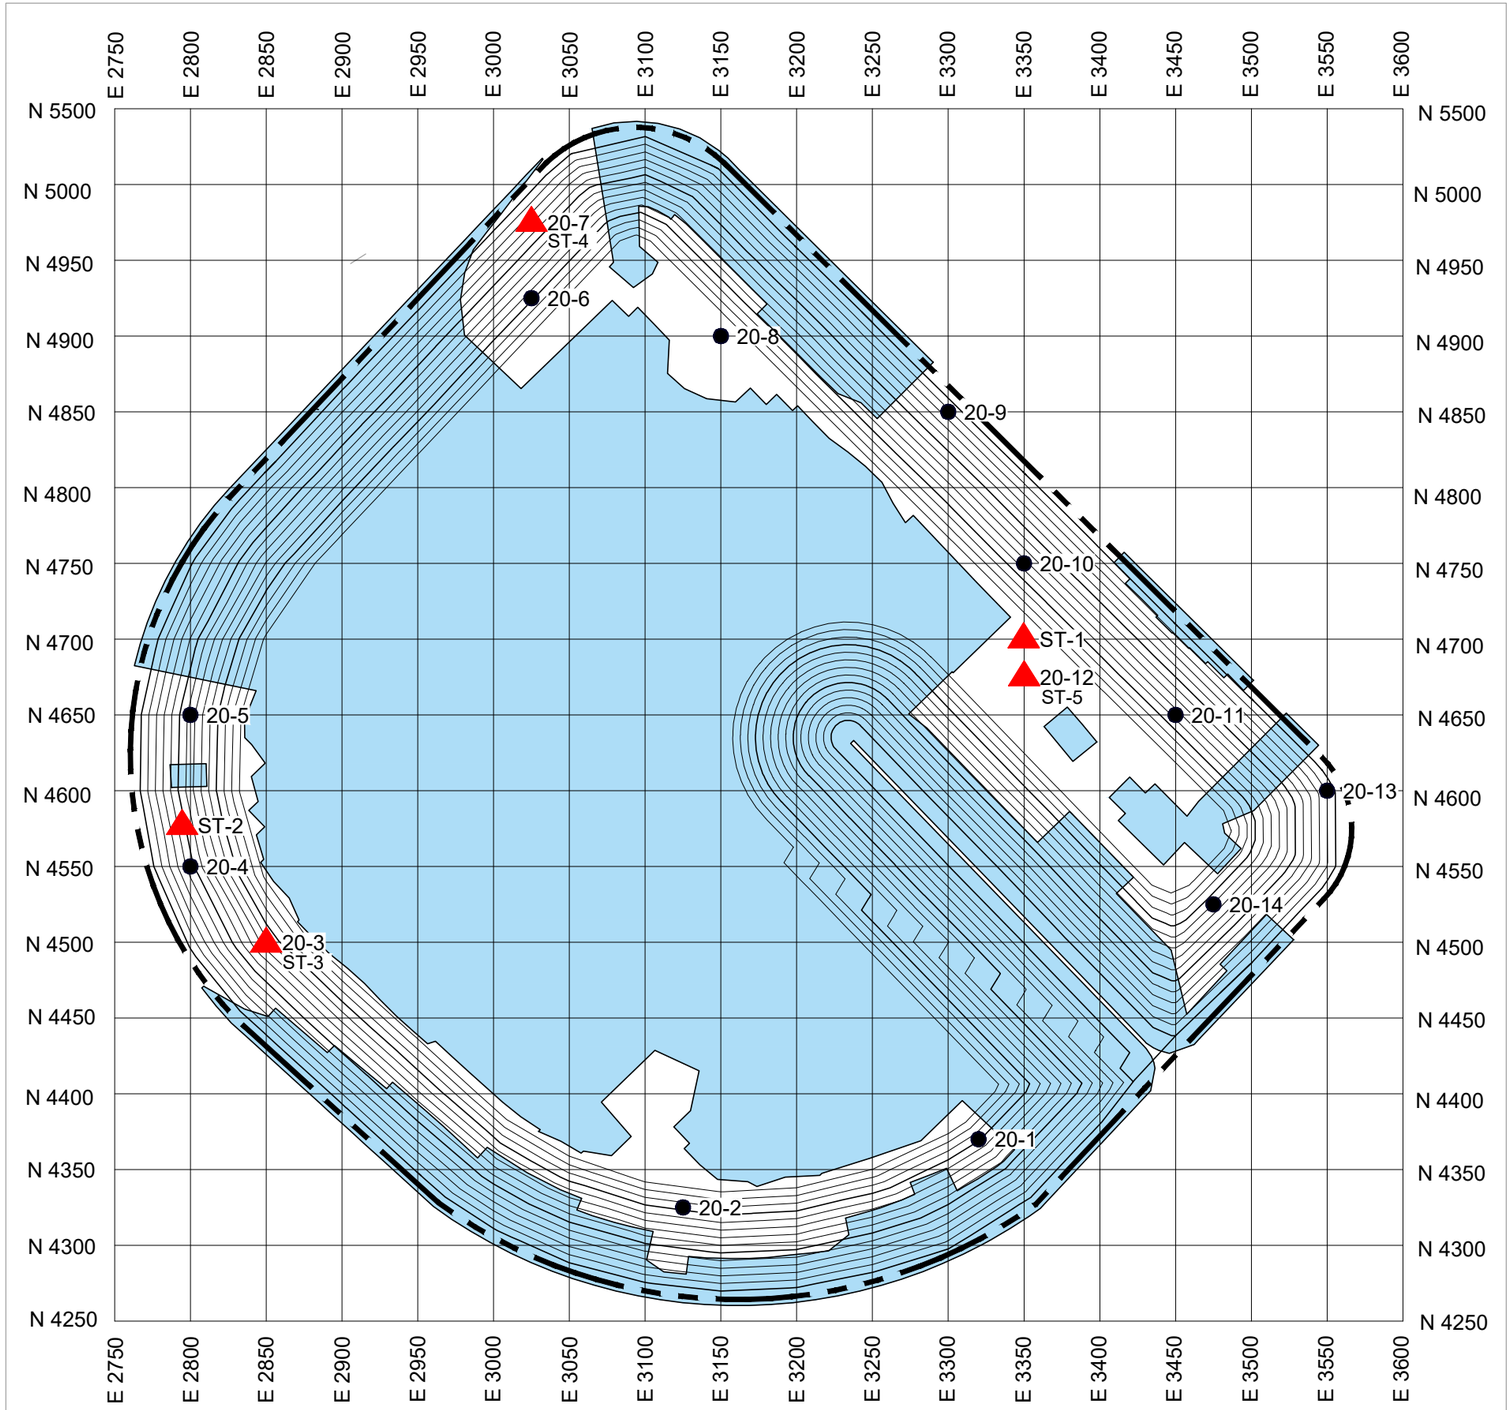
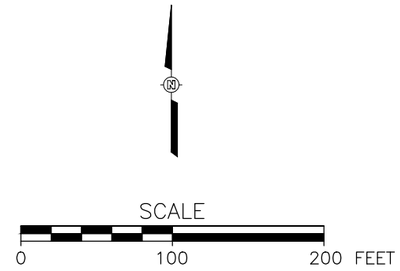
# Test Location Maps





## LEGEND

- FGD-A POND LIMITS
- AREA COVERED WITH GCL
- 20-6 DENSITY TEST LOCATION
- ST-1 SHELBY TUBE LOCATION

NOTE:

1. DENSITY TESTS ONLY TAKEN ON UPPER 6" OF THE IN-SITU CLAY LINER.
2. ST-1 AND ST-2 WERE TAKEN FROM THE BOTTOM 18" OF IN-SITU CLAY LINER.

## CALIBRATION CERTIFICATE

Tensiometer Model: Pro-Tester T-0100

Device Calibrated: S-Type load cell
Range: 0 - 340 kilos Max Tension
A/D Module Model No: T-029

Calibration Apparatus:
Pro-Cal unit, model TC-0100/A

Load Cell Serial No: 158699

Channel No: N/A

Load Cell Model No: M2405-750#
AD Module Serial No. 4521158699

| Dead Weight (kilos): | |
|---|---|
| W1 | 1 |
| W2 | 69 |
| W3 | 137 |

| Reference Cell: | |
|---|---|
| R1 | 1 |
| R2 | 69 |
| R3 | 137 |

Indicator reading with no load: 0

Offset: 4.999117 Scale: 3.324482

| Applied Force in kilos | Cell Response: | Deviation Error: |
|---|---|---|
| 1 | 1 | 0.00 |
| 24 | 24 | 0.00 |
| 46 | 46 | 0.00 |
| 69 | 69 | 0.00 |
| 92 | 92 | 0.00 |
| 114 | 114 | 0.00 |
| 137 | 137 | 0.00 |

Total Deviation Error (%): 0.00%

Temperature at time of calibration: 17 degrees C
Exitation Voltage: 5 V DC

This calibration conforms to the standards set by ASTM E4 and is traceable to NIST standards

Note: A/D Module and load cell above have been systems calibrated and are considered a matched pair. In general, calibrated A/D Modules and load cells are not interchangeable.

Calibration Technician: TT Date: 11/23/21

Signature: Tahoe Taylor

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the *final* laboratory report for the Seam testing of nine (9) HDPE Seam sample/s.

**PROJECT NAME: Oak Grove Steam Electric Station** DATE REPORTED: **January 14, 2022**

**REFERENCE TRI JOB NO.:** CA220014

**DATE RECEIVED:** January 14, 2022

**SAMPLE(S) SENT BY:** SCS Engineers

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI-CA CONTROL NUMBER* | *SAMPLE ID* | *TRI-CA CONTROL NUMBER* |
|---|---|---|---|
| DX-1 R9/P14 | 161089 | DS-5 P25/P26 | 161094 |
| DS-1 P1/P2 | 161090 | DS-6 P26/P27 | 161095 |
| DS-2 P2/P3 | 161091 | DS-7 P36/P38 | 161096 |
| DS-3 P11/P13 | 161092 | DS-8 P38/P39 | 161097 |
| DS-4 P13/P14 | 161093 | | |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D6392 | Shear Bond Strength |
| 2. ASTM D6392 | Peel Bond Adhesion |

**TEST RESULTS:** The test results are summarized in the attached Table(s) 1 to 5.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,

**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the **sample/s** tested **is/are** believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Failed seam samples are kept for two (2) years and good seam samples are disposed of after two (2) weeks.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the *final* laboratory report for the Seam testing of fifteen (15) HDPE Seam sample/s.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **January 18, 2022**

**REFERENCE TRI JOB NO.:** CA220019

**DATE RECEIVED:** January 18, 2022

**SAMPLE(S) SENT BY:** SCS Engineers

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI-CA CONTROL NUMBER* | *SAMPLE ID* | *TRI-CA CONTROL NUMBER* |
|---|---|---|---|
| DX-2 R29/P73 | 161108 | DS-15 P66/P67 | 161116 |
| DX-3 P82/R80 | 161109 | DS-16 P71/P73 | 161117 |
| DS-9 P47/P48 | 161110 | DS-17 P74/P73 | 161118 |
| DS-10 P50/P51 | 161111 | DS-18 P74/P25 | 161119 |
| DS-11 P57/P58 | 161112 | DS-19 P75/P76 | 161120 |
| DS-12 P60/P61 | 161113 | DS-20 P76/P81 | 161121 |
| DS-13 P61/P70 | 161114 | DS-21 P80/P82 | 161122 |
| DS-14 P70/P71 | 161115 | | |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D6392 | Shear Bond Strength |
| 2. ASTM D6392 | Peel Bond Adhesion |

**TEST RESULTS:** The test results are summarized in the attached Table(s) 1 to 8.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,

**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the **sample/s** tested **is/are** believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Failed seam samples are kept for two (2) years and good seam samples are disposed of after two (2) weeks.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

Sam Franco
***SCS Engineers***
12651 Briar Forest Dr. Suite 205
Houston, TX, 77077

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the *final* laboratory report for the Seam testing of seventeen (17) HDPE Seam sample/s.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **January 21, 2022**

**REFERENCE TRI JOB NO.:** CA220028

**DATE RECEIVED:** January 21, 2022

**SAMPLE(S) SENT BY:** SCS Engineers

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI-CA CONTROL NUMBER* | *SAMPLE ID* | *TRI-CA CONTROL NUMBER* |
|---|---|---|---|
| DS- 22 P81/P83 | 161155 | DS- 29 P99/P98 | 161164 |
| DS- 23 P84/P83 | 161156 | DS- 30 P101/P99 | 161165 |
| DS- 24 P85/P84 | 161157 | DS- 31 P103/P101 | 161166 |
| DS- 25 P86/P85 | 161158 | DS- 32 P106/P104 | 161167 |
| DS- 26 P91/P86 | 161159 | DS- 33 P109/P107 | 161168 |
| DS- 27 P94/P92 | 161160 | DS- 34 P112/P110 | 161169 |
| DS- 28 P94/P96 | 161161 | DS- 35 P9/P110 | 161170 |
| DX- 4 P125/P101 | 161162 | DS- 36 P115/P116 | 161171 |
| DX- 5 P113/P142 | 161163 | | |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D6392 | Shear Bond Strength |
| 2. ASTM D6392 | Peel Bond Adhesion |

**TEST RESULTS:** The test results are summarized in the attached Table(s) 1 to 9.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,

**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the **sample/s** tested **is/are** believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Failed seam samples are kept for two (2) years and good seam samples are disposed of after two (2) weeks.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

***SCS Engineers***
12651 Briar Forest Dr. Suite 205
Houston, TX, 77077

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the *final* laboratory report for the Seam testing of sixteen (16) HDPE Seam sample/s.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **January 25, 2022**

**REFERENCE TRI JOB NO.:** CA220037

**DATE RECEIVED:** January 25, 2022

**SAMPLE(S) SENT BY:** SCS Engineers

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI-CA CONTROL NUMBER* | *SAMPLE ID* | *TRI-CA CONTROL NUMBER* |
|---|---|---|---|
| DS- 37 P25/P26 | 161219 | DS- 48 P161/P166 | 161227 |
| DS- 39 P128/P127 | 161220 | DS- 49 P177/P176 | 161228 |
| DS- 40 P129/P128 | 161221 | DS- 50 P178/P1150 | 161229 |
| DS- 42 P148/1P47 | 161222 | DS- 51 P176/P139 | 161230 |
| DS- 43 P150/P149 | 161223 | DS- 38 P127/P87 | 161215 |
| DS- 44 P155/P156 | 161224 | DS- 41 P140/P141 | 161216 |
| DS- 46 P167/P168 | 161225 | DS- 45 P168/P163 | 161217 |
| DS- 47 P170/P169 | 161226 | Dx- 6 P86/R177 | 161218 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D6392 | Shear Bond Strength |
| 2. ASTM D6392 | Peel Bond Adhesion |

**TEST RESULTS:** The test results are summarized in the attached Table(s) 1 to 9.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,

**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the **sample/s** tested **is/are** believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Failed seam samples are kept for two (2) years and good seam samples are disposed of after two (2) weeks.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

Houston, TX, 77077

**Re:** FINAL LABORATORY TEST REPORT

Dear Mr. Franco:

Thank you for consulting TRI California for your material testing needs.

Enclosed is the *final* laboratory report for the Seam testing of two (2) HDPE Seam samples.

**PROJECT NAME:** Oak Grove Steam Electric Station DATE REPORTED: **January 26, 2022**

**REFERENCE TRI JOB NO.:** CA220042

**DATE RECEIVED:** January 26, 2022

**SAMPLE(S) SENT BY:** SCS Engineers

**SAMPLE IDENTIFICATIONS:**

| *SAMPLE ID* | *TRI-CA CONTROL NUMBER* |
|---|---|
| DX- 7 P177/ R226 | 161249 |
| DX- 8 P168/ R237 | 161250 |

**TESTS REQUIRED / PERFORMED:**

| *TEST METHOD* | *DESCRIPTION* |
|---|---|
| 1. ASTM D6392 | Shear Bond Strength |
| 2. ASTM D6392 | Peel Bond Adhesion |

**TEST RESULTS:** The test results are summarized in the attached Table 1.

Note: The general conditioning and testing of the material samples identified in this report were performed within the range of the laboratory environmental conditions; i.e., 20-24°C and 45-65% RH. Otherwise, the actual environmental conditions are indicated in the respective test method reported.

Respectfully,

**TRI Environmental, Inc. - California**

Maria Espitia
Quality Assurance

Chad Blackwell
TRI-CA Director

*Signatures are on file*

It shall be noted that the **sample/s** tested **is/are** believed to be true representatives of the material produced under the designation herein stated. In addition, the attached laboratory tests results are considered indicative only of the quality of samples/specimens that were actually tested. The appropriate test methods hereby employed are based on the current and accepted industry practices. TRI neither accepts responsibility for nor makes claims to the intended final use and purpose of the material. The test data and all associated project information shall be held confidential and not to be reproduced and/or disclosed to other parties except in full and with prior written approval from pertinent entity duly authorized by the respective client or from the client itself. It is our policy to keep physical records of each job for two (2) years commencing from the date of receipt of the samples and keep its corresponding electronic file for seven (7) years. ***Failed seam samples are kept for two (2) years and good seam samples are disposed of after two (2) weeks.*** On the other hand, should you need us to keep them at a longer period, please advise us in writing.

**BREAK DESCRIPTION (ASTM D6392 FUSION):**

| | |
|---|---|
| AD | ADHESION FAILURE. |
| BRK | BREAK IN SHEETING. |
| SE1 | BREAK AT OUTER EDGE OF SEAM. |
| SE2 | BREAK AT INNER EDGE OF SEAM. |
| AD-BRK | BREAK IN FIRST SEAM AFTER SOME ADHESION FAILURE. |
| SIP | SEPARATION IN THE PLANE OF THE SHEET. |

**EXTRUSION:**

| | |
|---|---|
| AD1 | ADHESION FAILURE. SPECIMENS DELAMINATED UNDER THE BEAD. |
| AD2 | ADHESION FAILURE. |
| AD-WLD | BREAK THROUGH THE FILLET. |
| SE1 | BREAK AT BOTTOM EDGE OF SEAM. |
| SE2 | BREAK AT TOP EDGE OF SEAM. |
| SE3 | BREAK AT BOTTOM EDGE OF SEAM (for PEEL only) |
| BRK1 | BREAK IN BOTTOM SHEETING. |
| BRK2 | BREAK IN TOP SHEETING. |
| AD-BRK | BREAK IN FIRST SEAM AFTER SOME ADHESION FAILURE. |
| HT | BREAK AT EDGE OF HOT TACK |
| SIP | SEPARATION IN THE PLANE OF THE SHEET. |

(End of Table 1)

By accepting the data and results presented on this report, the Client agrees to limit the liability of TRI Environmental, Inc. from Client and all other parties for claims on issues, due to the use of this data, to the cost for the respective tests presented in this report; and the Client agrees to indemnify and hold harmless TRI Environmental, Inc. from and against all liabilities in excess of the aforementioned limit.

# APPENDIX - E

## Resumes

# CQA

# JAMES ROY MURRAY III, P.E.

Vice President/Satellite Office Manager

## Education

Texas A&M University, Bachelor of Science in Civil Engineering

## Professional Licenses

Registered Professional Engineer, Maryland (No. 17665)
Registered Professional Engineer, Texas (No. 73860)

## Professional Affiliations

Solid Waste Association of North America
Texas Solid Waste Association of North America

## Professional Experience

Mr. Murray has over 35 years of experience in civil and environmental permitting, design and construction including municipal solid waste landfills and associated systems, liner systems, leachate collection systems, utilities, roadways, hydrologic analysis and hydraulic design including open channel systems, storm drainage pipe systems, culverts, bridges, basins, and other systems for the conveyance and control of stormwater. Mr. Murray has served as Certifying Engineer for over 47 liner construction projects. Mr. Murray also has extensive experience in landfill design, operation and construction having served for over 20 years as a consultant preparing landfill expansion permit applications. Mr. Murray has served as an expert witness and provided legal support for landfill permits. Mr. Murray also served as an engineer for several landfill facilities in Texas. Responsibilities included project management of permit amendments and modifications, compliance and construction. Selected projects representative of Mr. Murray's experience include:

### Landfill Design/Permit Application

- Design Engineer and project manager for the preparation of a vertical and horizontal expansion permit application for a landfill in Houston, Texas.
- Design Engineer and project manager for the preparation of a vertical and horizontal expansion permit application for a landfill in Hutto, Texas.
- Design Engineer and project manager for the preparation of a greenfield site permit application for a landfill in Laredo, Texas.
- Design Engineer and project manager for the preparation of a horizontal and vertical expansion permit application for a landfill in League City, Texas.
- Design Engineer and project manager for the preparation of a horizontal and vertical expansion permit application for a landfill in Brownsville, Texas.

- Project Manager for the preparation of a 30 foot vertical expansion permit application for a landfill in Cnverse, Texas.
- Project Manager for the preparation of a 700 acre horizontal expansion permit application for a landfill in Converse, Texas.
- Design Engineer and project manager for the preparation of a limited scope permit amendment to add Class 1 waste disposal at a landfill in Laredo, Texas.
- Design engineer and project manager for a grit trap waste permit application at a waste water treatment facility in Victoria, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an initial oil and gas landfill development, including: roads; drainage channels, ponds, culverts, 2 receiving pits, a truck wash and settling basin, site utilities; perimeter fencing; and a 12-acre landfill disposal cell for a landfill near Nordheim, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an initial oil and gas landfill development, including: roads; drainage channels, ponds, culverts, 3 receiving pits, 1 contaminated storm water pond, a truck wash and settling basin, site utilities; perimeter fencing; and a 12-acre landfill disposal cell for a landfill in Reeves County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an initial oil and gas landfill development, including: roads; drainage channels, ponds, culverts, 2 receiving pits, 1 collecting pit, a truck wash and settling basin, site utilities; perimeter fencing; and a 9-acre landfill disposal cell for a landfill in Reagan County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an initial oil and gas landfill development, including: roads; drainage channels, ponds, culverts, 3 receiving pits, 1 collecting pit, a truck wash and settling basin, scalehouse and associated facilities, site utilities; perimeter fencing; and an 8-acre landfill disposal cell for a landfill in Howard County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an initial landfill development, including: roads; drainage channels, ponds, culverts and other structures; scalehouse and associated facilities; site utilities; perimeter fencing; and two 8-acre landfill disposal cells for a landfill in Laredo, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an 6-acre landfill disposal cells for a landfill in Reeves County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an 8-acre landfill disposal cells for a landfill in Brownsville, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 5-acre landfill disposal cell for a landfill in Austin, Texas.
- Project manager for the preparation of design plans and technical specifications for a 4-acre landfill disposal cell for a landfill in Hardin County, Texas.

- Design Engineer and project manager for the preparation of design plans and technical specifications for an 11-acre landfill disposal cell for a landfill in Hutto, Texas.
- Project manager for the preparation of design plans and technical specifications for a 5-acre landfill disposal cell for a landfill in Austin, Texas.
- Project manager for the preparation of design plans and technical specifications for a 4-acre landfill disposal cell for a landfill in Hardin County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 9-acre landfill disposal cell for a landfill in Kingsville, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 4-acre landfill disposal cell for a landfill in Hardin County, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 7-acre landfill disposal cell for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 6-acre landfill disposal cell for a landfill in Brownsville, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 14-acre landfill disposal cells for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 12-acre landfill Pre-Subtitle D final cover for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 13-acre landfill Pre-Subtitle D final cover for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 22-acre landfill disposal cell for a landfill in Jaltipan, Vera Cruz.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an 8-acre landfill disposal cell for a landfill in Brownsville, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for two 14-acre landfill disposal cells for a landfill in San Antonio, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 7-acre landfill disposal cells for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for a 9-acre landfill disposal cell for a landfill in Austin, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for two 8-acre landfill disposal cells for a landfill in Brownsville, Texas.
- Design Engineer and project manager for the preparation of design plans and technical specifications for an 11-acre Type I and a 5.4-acre Type IV landfill disposal cells for a landfill in Kingsville, Texas.

- Design Engineer and project manager for the design and preparation of construction plans, specifications, and construction documents for temporary external embankment and top dome surface erosion and sediment controls for a landfill in Brownsville, Texas.

- Design Engineer and project manager for the design and preparation of construction plans, specifications, and construction documents for final cover maintenance plans for a landfill in Austin, Texas.

- Design Engineer for the design and preparation of construction plans, specifications, and construction documents for temporary stormwater facilities associated with three 8-acre low level radioactive material disposal cells in Fernald, Ohio.

- Project Manager for the preparation of detailed construction phasing plans for a landfill in Carson City, Nevada.

- Project manager for the preparation of design plans and technical specifications for a 0.9-acre leachate evaporation pond and 105 feet of leachate forcemain for a landfill in Lacy Lakeview, Texas.

- Project manager for the preparation of design plans and technical specifications for a 1.8-acre leachate evaporation pond for a landfill in La Gloria, Texas.

- Project manager for the preparation of design plans and technical specifications for a 0.7-acre leachate evaporation pond and 370 feet of leachate forcemain for a landfill in Hutto, Texas.

- Project Manager and Design Engineer for the preparation of construction plans for a 35-acre landfill cell, and leachate forcemain system for a landfill in San Antonio, Texas.

- Design Engineer and project manager for the preparation of design plans and technical specifications for two one-acre leachate evaporation ponds and 4,000 feet of leachate forcemain for a landfill in Brownsville, Texas.

- Design Engineer for the leachate distribution and storage facilities for a landfill in San Antonio, Texas.

- Design Engineer and project manager for the preparation of design plans for a 10-acre industrial waste landfill cap for an industrial waste site in Travis County, Texas.

- Design Engineer and project manager for the preparation of Site Operating Plans in accordance with the TCEQ Site Operating Plan call-in for seven (7) landfills in Texas.

- Design Engineer for the preparation of permit plans, specifications, and design report for a landfill expansion in Nantucket, Massachusetts.

- Project Manager for the preparation of a variety of landfill design and permit modifications. These included the design of alternate liner systems, alternate final cover system, leachate collection systems, leachate evaporation ponds, site stormwater drainage systems, site roadways and facility designs, site sediment and erosion control systems, gas monitoring systems, groundwater monitoring systems, liner construction, final cover construction, site operating plans, and other environmental protection and monitoring plans.

## Construction Quality Assurance/Construction Quality Control

- Certifying engineer for a 12-acre Texas Railroad Commission waste facility in DeWitt County, Texas.
- Certifying engineer for a 1.8-acre Texas Railroad Commission contact water pond retrofit in Reeves County, Texas.
- Certifying engineer for an 8-acre Class 1 Subtitle D cell for a landfill in Laredo, Texas.
- Certifying engineer for two 6-acre Texas Railroad Commission waste disposal cell in Reeves County, Texas.
- Certifying engineer for an 8-acre Subtitle D cell for a landfill in Brownsville, Texas.
- Certifying engineer for a 12-acre Texas Railroad Commission waste facility in DeWitt County, Texas.
- Certifying engineer for a 9-acre Texas Railroad Commission waste facility in Howard County, Texas.
- Certifying engineer for a 4-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 12-acre Texas Railroad Commission waste facility in Reeves County, Texas.
- Certifying engineer for a 9-acre Texas Railroad Commission waste facility in Reagan County, Texas.
- Certifying engineer for an 8-acre Texas Railroad Commission waste facility in Reeves County, Texas.
- Certifying engineer for a 9-acre Texas Railroad Commission waste facility in Howard County, Texas.
- Certifying engineer for a 15-acre Class 1 Subtitle D cell for a landfill in Laredo, Texas.
- Certifying engineer for a 50-acre GCL and geomembrane lined evaporation pond for a coal power plant in Wilbarger County, Texas.
- Certifying engineer for an 11-acre Subtitle D cell for a landfill in Hutto, Texas.
- Certifying engineer for a 16-acre pre-Subtitle D and Subtitle D final cover for a landfill in Hutto, Texas.
- Certifying engineer for a 7-acre Subtitle D cell for a landfill in Lacy Lakeview, Texas.
- Certifying engineer for a 14-acre pre-Subtitle D and Subtitle D final cover for a landfill in Lacy Lakeview, Texas.
- Certifying engineer for a 4-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 1-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 3-acre Type IV cell for a landfill in Austin, Texas.

- Certifying engineer for a 3-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 5-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 9-acre Subtitle D cell for a landfill in Kingsville, Texas.
- Certifying engineer for a 6-acre Subtitle D cell for a landfill in Brownsville, Texas.
- Certifying engineer for a 7-acre Type IV cell for a landfill in Austin, Texas.
- Certifying engineer for a 14-acre Subtitle D cell for a landfill in Austin, Texas.
- Certifying engineer for a 13-acre Subtitle D and Pre-Subtitle D final cover for a landfill in Austin, Texas.
- Certifying engineer for a 12-acre Pre-Subtitle D final cover for a landfill in Austin, Texas.
- Certifying engineer for two 1-acre leachate evaporation ponds for a landfill in Brownsville, Texas.
- Certifying engineer for a 5-acre Subtitle D cell for a landfill in Kingsville, Texas.
- Certifying engineer for a 6-acre Type IV cells for a landfill in Austin, Texas.
- Certifying engineer for a 6-acre Type IV cells for a landfill in Austin, Texas.
- Certifying engineer for a 5-acre Type IV cells for a landfill in Austin, Texas.
- Certifying engineer for a 3-acre Subtitle D cell for a landfill in Hutto, Texas.
- Certifying engineer for an 11-acre Subtitle D cell for a landfill in Kingsville, Texas.
- Certifying engineer for a 7-acre Subtitle D cell for a landfill in Hutto, Texas.
- Certifying engineer for three 8-acre Subtitle D cells for a landfill in Brownsville, Texas.
- Certifying engineer for a 9-acre Subtitle D cell for a landfill in Austin, Texas.
- Certifying engineer for a 4-acre Type IV cell for a landfill in League City, Texas.
- Certifying engineer for a 7-acre Subtitle D cell for a landfill in Austin, Texas.
- Certifying engineer for a 6-acre Subtitle D cell for a landfill in Sherman, Texas.
- Certifying engineer for two 5-acre Type IV cells for a landfill in Austin, Texas.
- Certifying engineer for a 1.5 and 1.6 acre Type IV cells for a landfill in Austin, Texas.

## Hydrologic Analysis

- Project Manager for the study of the ultimate development condition of the 93 square mile drainage area for a Bayou in Houston, Texas. Study included modifying the current FEMA hydrologic model (HEC-1) to reflect the impact of the ultimate developed condition on the drainage basin hydrologic characteristics. These included the ultimate developed effect on rainfall loss rates, time of concentrations, basin storage volumes, bayou storage characteristics, off channel detention effects, and other hydrologic variants. This study was prepared as a guide for determining future basin improvements and to serve as the basis for a Conditional Letter of Map Revision from FEMA. The study also included the design of 4 regional stormwater detention basins.

- Project Engineer for the study of a 3,798-acre drainage area in Boling, Texas. The drainage area was modeled for the 25 and 100-year, 24 hour storm events, utilizing the Clark Unit Hydrograph Technique for design storm hydrographs and rainfall loss rates. This study was utilized to determine the effects of severe storm events on the site and as the basis for designing channel improvements, culverts, bridges, and other drainage systems included in the project.

- Project Manager for the hydrologic analysis of 6 drainage basins ranging in size from 33 acres to 426 acres for a landfill in Converse, Texas. The drainage areas were modeled for the pre-developed, current, and post-development conditions for the 25 and 100-year, 24-hour storm events, utilizing the Rational Method for drainage areas less than 200 acres and the Soil Conservation Service method for design storm hydrographs and rainfall loss rates. Once the design peak flows were determined, 3 stormwater detention ponds were designed to attenuate the peak 25-year, 24-hour storm from the developed condition to the lesser of the pre-developed or current conditions.

- Project Manager for a Conditional Letter of Map Revision from FEMA for a 845 acre landfill in Angleton, Texas.

- Design Engineer for a landfill final cover and perimeter drainage system for a landfill near Carlsbad, New Mexico.

## Hydraulic Design

- Project Manager for the hydraulic design and preparation of permit and construction plans for over 12,000 linear feet of drainage channels and over 24 single and multiple barrel culverts for a landfill in Converse, Texas.

- Project Manager on the hydraulic analysis of over 23 miles of bayou in Houston, TX. The study initiates the bayou's confluence with Buffalo Bayou and proceeds upstream through 49 bridges through a variety of improved and non-improved channel sections.

- Project Manager on the design of a 60,000 gallon per minute stormwater pumping station for Fort Bend Levee Improvements District No. 7 in Sugarland, Texas.

- Project Manager on the planning and design of roadways and their associated stormwater systems. These systems included the layout of piped storm drainage systems including a variety of stormwater inlets, manholes, outlet structures. These conduits included reinforced concrete pipe, corrugated metal pipe, and various plastic pipes, all ranging in size from 8" to 72" in diameter.

Also designed culvert ranging in size from single barrel 24" pipes to multiple barrel 8'x8' box culverts. A partial list of Mr. Murray's roadway and associated stormwater system design includes the following:

1. Willow Hills Subdivision - Anne Arundel County, Maryland
2. Yorktown Manor Subdivision - Prince George's County, Maryland
3. Bishops Bequest Subdivision - Prince George's County, Maryland
4. Bel Air Estates Subdivision - Prince George's County, Maryland
5. Summerfield Subdivision - Prince George's County, Maryland
6. Churchill's Choice Subdivision - Prince George's County, Maryland
7. Clayton's Bend Subdivision - Sugarland, Texas
8. Lackland City Subdivision - San Antonio, Texas
9. Ventura Subdivision - San Antonio, Texas
10. Heritage Park Subdivision - San Antonio, Texas
11. Lackland City Subdivision - San Antonio, Texas
12. Collington Corporate Center - Prince George's County, Maryland
13. Chesapeake Centre - Anne Arundel County, Maryland
14. Westinghouse ATL - Anne Arundel County, Maryland
15. Largo Town Center - Prince George's County, Maryland
16. La Cantera, Fiesta Texas Theme Park - San Antonio, Texas

## Expert Witness and Legal Support

- Provide expert witness services in an administrative hearing in support of a 499-acre greenfield landfill permit amendment in Laredo, Texas. Mr. Murray provided testimony in support of many aspects of the proposed facility's location and design. This included testimony on traffic, flood plains, landfill layout, stormwater analysis and design, landfill gas monitoring system, leachate collection system, and site operating plan.

- Provide expert witness services in an administrative hearing in support of a 373-acre landfill expansion permit amendment in Hutto, Texas. Mr. Murray provided testimony in support of many aspects of the proposed facility's location and design. This included testimony on surrounding land use, traffic, flood plains, landfill layout, stormwater analysis and design, landfill gas monitoring system, leachate collection system, and site operating plan.

- Provide expert witness services in an administrative hearing in support of a landfill expansion permit amendment in Austin, Texas. Mr. Murray provide expert witness support for the landfill stormwater analysis and design.

## Publications and Presentations

- Murray, J. R., "Manual De Protocolo De Construccion Nuevos Rellenos Sanitarios Con Revestimientos Compuestos (Construction of New Sanitary Landfills with Composite Liners)", Comision Centroamericana de Ambiente Y Desarrollo and United States International Development (USAID), November 30, 2010.

- Murray, J. R., "Manual De Protocolo De Operacion Nuevos Rellenos Sanitarios Para Desechos Solidos (Inspection Protocol for Construction and Operation of Landfills, Operation of New Sanitary Solid Waste Landfills)", Comision Centroamericana de Ambiente Y Desarrollo and United States International Development (USAID), September 2011.

SCS ENGINEERS

# SAMUEL A. FRANCO, P.E.

## Education

BS – Environmental Engineering, Texas A&M University – Kingsville, 2015

## Specialty Certifications

Registered Professional Engineer, Texas, 2020
APNGA Certified - Training Course Regarding Nuclear Density Testing Equipment and Radiology Safety
Radiation Safety Officer (RSO) - Troxler Radiation Safety Officer Certification

## Professional Experience

As a Project Professional, Mr. Franco is responsible for supporting SCS's Texas engineering practice. Mr. Franco has over 7 years of experience providing support for a variety of solid waste projects for both private and municipal facilities in Texas. Mr. Franco has participated in the permitting and design of landfills, transfer stations, and storm water protection and drainage systems.

Mr. Franco's responsibilities have included construction quality assurance (CQA), including performing as the on-site lead CQA technician for soil and geosynthetic liner systems; hydrologic analysis of landfill drainage and erosion control systems; development of construction plans and specifications; analysis of landfill operation and developmental costs; and permit application, modification, and amendment preparation. He is familiar with ASTM procedures concerning testing and inspection of soils and geosynthetics. His involvement with soils includes determining moisture/density relationships, Atterberg limits, sieve analysis, and permeability testing. His involvement with geosynthetics includes oversight of testing methods for geosynthetic clay liner (GCL), HDPE geomembrane, and geotextiles.

Mr. Franco is trained and certified to operate Troxler 3400 series nuclear density gauges for testing soil density and moisture content.

The following are representative of the projects in which Mr. Franco has participated.

### Landfill Engineering

- Staff Engineer for the preparation of compost facility permit modifications to the site development plans and site operating plans for multiple municipal solid waste landfills in Fort Bend County and Harris County.
- Staff Engineer for the preparation of a permit modification to the site development plan and site operating plan for a municipal solid waste landfill in Williamson County.
- Staff Engineer for the air permit preparation for a liquid solidification operation at a municipal solid waste landfill in Laredo, Texas.
- Participated in the permit registration for a transfer station in Bastrop County, Texas.
- Staff Engineer for the annual preparation of financial assurance letters for two MSW landfills in Texas.
- Staff Engineer for the preparation of temporary authorizations and permit modifications for alternative daily cover for two MSW landfills in Texas.

- Staff Engineer for the preparation of construction plans, bid documents, and specifications for the initial facility development for six oil and gas waste facilities. These plans also included construction of the perimeter fence, roads, scale house, and storm water control features.
- Staff Engineer for the preparation of a SWP3 for compliance with the National Pollutant Discharge Elimination System/ Texas Pollutant Discharge Elimination System (NPDES/TPDES) General Permits related to discharge from industrial activities and construction activities. Assisted a landfill in Laredo, Texas with compliance, monitoring, and reporting activities required by the SWP3 plan.
- Staff Engineer for the preparation of construction plans, bid documents, and specifications for a 8.6 acre cell at a municipal solid waste landfill in Cameron County, Texas. These plans also included construction of roads, stormwater control features, erosion control features, and culvert analysis.
- Staff Engineer for the preparation of construction plans, bid documents, and specifications for a 6.2 acre cell at a municipal C&D landfill in Erath County, Texas.
- Staff Engineer for the preparation of a Citizens' Collection Station submittal in Erath County, Texas.
- Staff Engineer for the preparation of construction plans, bid documents, and specifications for a 7.5 acre cell at a private solid waste landfill near Laredo, Texas.
- Staff Engineer for the preparation of Geomembrane Liner Evaluation Reports (GLER) and Soil Liner Evaluation Reports (SLER) for various solid waste landfills.
- Staff Engineer for the preparation of Title V semi-annual deviation reports for two MSW landfills in Texas.
- Participated in the preparation of cost estimated for solid waste landfills. Conducted analysis and cost estimate for the construction of two cells for a privately owned landfill.
- Participated in the preparation of airspace calculations for various solid waste landfills. Conducted analysis and prepared reports for conceptual final and base grade alterations, waste footprint expansions, projected airspace gains, airspace consumed, and airspace remaining using AutoCAD software.
- Staff Engineer for the preparation of a permit modification to revise the maximum closure area and closure costs for a privately owned landfill in Laredo, Texas.

**Construction Quality Assurance**

- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 15 acre MSW acre landfill near Laredo, Texas.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 4 acre MSW landfill in Port Arthur, Texas.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 9 acre MSW landfill in Nacogdoches, Texas.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 4 acre MSW landfill near Paris, Texas.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a power station for a 50 acre evaporation pond in Wilbarger County, Texas.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 10 acre MSW landfill in Fort Bend County, Texas.

- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at an 11 acre MSW landfill near Waco, TX.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 9 acre MSW landfill near Livingston, TX.
- Field Construction Quality Assurance Technician for a leak detection and leachate collection geomembrane liner system at a 12 acre landfill near Orla, TX.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 10 acre landfill near Hutto, TX.
- Field Construction Quality Assurance Technician for a Subtitle D geomembrane liner at a 10 acre landfill near Angleton, TX
- Field Construction Quality Assurance Technician for a leak detection and leachate collection geomembrane liner system at a 12 acre landfill near Big Spring, TX.
- Field Construction Quality Assurance Technician for a leak detection and leachate collection geomembrane liner system at a 24 acre landfill near Nordheim, TX.

**Other Experience**

- Previously employed by waste hauling company in Laredo, Texas as a Customer Relations Specialist.

ATLANTIC COAST CONSULTING, INC.

# Danny Rennicks

## Senior Construction Quality Assurance Monitor

6 Years of Experience

**Education:** Cobb County High School, Cobb County, Georgia (1978)

**Certifications:** OSHA 40 Hour HAZWOPER

Mr. Rennicks is a Senior Construction Quality Assurance (CQA) Monitor who specializes in the construction of solid waste landfills, waste impoundments, leachate collection systems, and landfill closures. His experience includes on-site management of numerous solid waste cell and closure certification projects which involved the placement of structural fill, clay liner and geosynthetic materials throughout the United States.

### Project Experience

- ***Resident Soils Monitor & Lead Geosynthetics Monitor*** for the construction of a 12-acre double lined Subtitle D sanitary landfill cell and associated double lined leachate collection ponds located near Nordheim, Texas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 25 acres located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a double lined Subtitle D sanitary landfill cell totaling approximately 11 acres located in Randolph County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 15 acres located near Laredo, Texas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 20 acres located in Ball Ground, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of two double lined Subtitle D sanitary landfill cell totaling approximately 15.5 acres located in Randolph County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data. In addition, this Greenfield project included the oversight construction for numerous roads, a bridge, a maintenance building, a scale house building, additional site facility structures, leachate containment structures and tanks, and leachate forcemain pipelines.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 11 acres located in Williamson County, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils and Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 20 acres located in Hampton, Virginia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.

- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a 25-acre Subtitle D sanitary landfill closure project located near Ball Ground, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 10 acres located in Randolph County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 10 acres located in Ball Ground, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 14 acres located near Rome, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Lead Geosynthetics Monitor*** for the construction of a 12-acre Subtitle D sanitary landfill cell located near Ballground, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Lead Geosynthetics Monitor*** for the construction of a 12-acre Subtitle D sanitary landfill closure project located in Cumberland County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils & Lead Geosynthetics Monitor*** for the construction of a 9-acre Subtitle D sanitary landfill cell located near Iowa Park, Texas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a double lined Subtitle D sanitary landfill cell totaling approximately 5.2 acres located in Welsh, Louisiana. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils & Geosynthetics Monitor*** for the construction of a 7.5-acre Subtitle D sanitary landfill cell located near Thomasville, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils & Geosynthetics Monitor*** for the construction of a 6-acre Subtitle D sanitary landfill cell located in Butler County, Nebraska. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils & Lead Geosynthetics Monitor*** for the construction of a 6-acre Subtitle D sanitary landfill cell located in Gordon County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 3 acres located near Weatherford, Texas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.

- ***Resident Soils and Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 6 acres located in Berkeley County, South Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 7 acres located in Montgomery County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 4.4 acres located in Banks County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 3 acres located near Vail, Colorado. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a clay lined retention wall located in Travis County, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Building Monitor*** for the construction of a landfill operations building located in Hernando County, Florida. Responsibilities included technical guidance to site personnel and monitoring of the overall building construction.

# Paul Vaillancourt

## Senior Construction Quality Assurance Monitor

11 Years of Experience

**Education:** B.S. Industrial Technology, Memphis State University (1965)

**Certifications:** GCI-ICP – Soils Technician
GCI-ICP – Geosynthetic Technician
OSHA 40 Hour HAZWOPER

Mr. Vaillancourt is a Senior Construction Quality Assurance (CQA) Monitor who specializes in the construction of solid waste landfills, waste impoundments, leachate collection systems, and landfill closures. His experience includes on-site management of numerous solid waste cell and closure construction projects which involved the placement of structural fill, clay liner and geosynthetic materials throughout the United States.

### Project Experience

- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a triple geomembrane layer, composite municipal solid waste landfill closure totaling approximately 15 acres located in Hardee County, Florida. This project also included some landfill gas system repairs and installation work. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a 10-acre Subtitle D sanitary landfill cell located near Randleman, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a 15-acre Subtitle D sanitary landfill cell located near Ball Ground, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of two Subtitle D municipal solid waste landfill cell totaling approximately 11.3 acres located in Bradley County, Tennessee. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a protective cover soil layer for an 11-acre Subtitle D sanitary landfill cell located in Jefferson County, Alabama. Responsibilities included technical guidance to site personnel, monitoring of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Lead Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling over 8 acres located in Harper Kansas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling over 8.2 acres located near Enoree, South Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of an 8-acre Subtitle D sanitary landfill cell located near Aulander, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of two Subtitle D sanitary landfill cells totaling over 15 acres located in McAllen, Texas. Responsibilities included technical

guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.

- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell and closure totaling over 16 acres located in Springdale, Arkansas. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils and Geosynthetics Monitor*** for the construction of a double lined Subtitle D sanitary landfill cell totaling approximately 11 acres located in Randolph County, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling over 6.5 acres located near Ridgely, Tennessee. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 15 acres located near Charlotte, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 11 acres located in Williamson County, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a 7-acre Subtitle D sanitary landfill cell located in Butler County, Nebraska. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 6 acres located near Pecos, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 8 acres located near Houston, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 7.5 acres located near Thomasville, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soil Monitor & Geosynthetics Manager*** for the construction of a soil liner landfill closure project totaling approximately 7 acres located in Bartow County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a composite municipal solid waste landfill cell project totaling approximately 9 acres located near Dillon, Colorado. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soil Monitor & Geosynthetics Manager*** for the construction of a 3-acre Subtitle D sanitary landfill cell located near Meno, Oklahoma. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.

- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary holding pond totaling over 6 acres located near Pecos, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soil Monitor & Geosynthetics Monitor*** for the construction of a C&D landfill closure project totaling approximately 14 acres located in Milton, Georgia. Responsibilities included technical guidance to site personnel, monitoring and testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soil Monitor, Geosynthetics Monitor & Gas Systems Monitor*** for the construction of a 9-acre Subtitle D sanitary landfill cell and a landfill gas system located near Sand Springs, Oklahoma. Responsibilities included technical guidance to site personnel, testing of the pipeline system and review of collected data.
- ***Resident Soil Monitor & Geosynthetics Monitor*** for the construction of a Subtitle D municipal solid waste landfill cell totaling approximately 10 acres located in Columbia, South Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a 4.4-acre Subtitle D sanitary landfill cell located in Banks County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Gas Systems Monitor*** for the construction of a landfill gas system located near Sand Springs, Oklahoma. Responsibilities included technical guidance to site personnel, testing of the pipeline system and review of collected data.
- ***Resident Soils Monitor*** for the construction of a 4-acre Subtitle D sanitary landfill cell located in Banks County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a Subtitle D sanitary landfill cell totaling approximately 3 acres located near Abilene, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a 10-acre Subtitle D sanitary landfill cell located near Houston, Texas. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a soil liner landfill closure project totaling approximately 28 acres located near Clinton, Iowa. Responsibilities included technical guidance to site personnel, testing of all soil materials and review of collected data.
- ***Resident Soils Monitor*** for the construction of a soil liner landfill closure project totaling approximately 7 acres located in Walton County, Georgia. Responsibilities included technical guidance to site personnel, testing of all soil materials and review of collected data.
- ***Resident Gas Systems Monitor*** for the construction of a landfill gas system located near Columbia, South Carolina. Responsibilities included technical guidance to site personnel, testing of the pipeline system and review of collected data.
- ***Resident Soils Monitor*** for the construction of an approximately 5-acre C&D landfill cell located in Stanley, North Carolina. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.

- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a 9.5-acre Subtitle D sanitary landfill cell located in Houston County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Soil Monitor*** for the construction of an approximately 6-acre C&D landfill cell located near Houston, Texas. Responsibilities included technical guidance to site personnel, monitoring and testing of soils materials and review of collected data.
- ***Resident Gas Systems Monitor*** for the construction of a landfill gas system located in Houston County, Georgia. Responsibilities included technical guidance to site personnel, testing of the pipeline system and review of collected data.
- ***Soils Monitor & Geosynthetics Monitor*** for the construction of a 21-acre Subtitle D sanitary landfill cell located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Gas Systems Monitor*** for the construction of a landfill gas system located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, testing of the pipeline system and review of collected data.
- ***Soils Monitor*** for the construction of a 20-acre Subtitle D sanitary landfill cell located in DeKalb County, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Soils Monitor & Geosynthetics Monitor*** for the construction of a composite municipal solid waste landfill closure totaling approximately 14 acres located in Spartanburg County, South Carolina. Responsibilities included technical guidance to site personnel, testing of soil and geosynthetics materials and review of collected data.
- ***Resident Monitor*** for the construction of a landfill methane gas conversion and refueling station project located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, monitoring of pipeline construction and material placement and the review of the collected as-built system data.
- ***Resident Monitor*** for the removal of waste material and backfilling with clean structural fill material at the Carrie Mays Park Improvements project located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.
- ***Resident Monitor*** for the emergency repair construction for various elements of a Subtitle D municipal solid waste landfill facility located in Augusta, Georgia. Responsibilities included technical guidance to site personnel, testing of soil materials and review of collected data.

# 1.0 INTRODUCTION

## 1.1 Purpose and Scope

The Oak Grove SES Power Station is located in Robertson County, Texas. The FGD-B Pond is the subject of this Liner Evaluation Report (LER). The location of the Oak Grove SES Power Station is presented on Figure 1. The FGD-B Pond is located on the northern portion of the facility presented on Figure 2. The FGD-B Pond in plan view is approximately 492,900 square feet or 11.3 acres.

Golder Associates Inc. (Golder) was retained by Luminant Power (Luminant) to provide third party Construction Quality Assurance (CQA) monitoring and testing services during the construction of the composite liner for the FGD-B Pond. This report summarizes the CQA monitoring activities, observations and the results of the tests conducted by Golder during the preparation of the subgrade and installation of the clay and geomembrane liners. It is Golder's opinion that the FGD-B Pond was constructed in compliance with the project plans, specifications and Quality Control Plan (QCP).

## 1.2 Project Team

Golder Associates Inc. (Golder) of Houston, Texas prepared the project drawings for the FGD-B Pond. Ranger Excavating (Ranger) of Austin, Texas performed the construction of the clay liner. The installation of the geomembrane liner was performed by Texas Environmental Plastics, Inc. (TEP) of Houston, Texas. Record surveying services for lines and grades, including clay liner and protective cover thickness verification, were provided by Survey and Mapping, Inc. (SAM) of Austin, Texas.

Golder monitored structural fill placement and clay and geomembrane liner construction activities. Golder's field personnel consisted of a resident CQA manager who was on-site full time during construction. Mr. Greg McQuaid and Mr. Mark Day fulfilled the resident CQA manager duties during the FGD-B Pond composite liner construction. They were assisted by Mr. Andrew Keeton and Mr. Allen Burks during portions of the project. A resume detailing their experience is provided in Appendix A. In addition to the presence of a CQA monitor, the professional of record made regular site visits during the course of the project.

The professional of record for the construction of the FGD-B Pond clay liner was Mr. Charles F. Rickert, P.E. Mr. Rickert is a registered professional engineer in the State of Texas (PE 62392). He has over 30 years of civil engineering and extensive earthwork construction experience, having been directly involved with numerous CQA earthwork projects. A resume detailing Mr. Rickert's experience is presented in Appendix A. The lines of communication between Mr. Rickert and Golder's field personnel were maintained regularly by telephone. Mr. Rickert visited the Oak Grove SES Power Station site frequently during clay liner construction and was in attendance at weekly progress meetings held on site. Mr.

Rickert made visits to the site on April 21, May 17, 24, 31, June 7, 14, 21, 28, July 12, 19, 28, August 2, 9, 16, 23, 30, September 13, 20, 27, October 4, 11, 25, November 1, 7, 15, and 29, 2011.

## 1.3 Project Work Schedule

Construction of the FGD-B Pond clay liner system took place between October 7 and November 9, 2011. Prior to that period CQA monitoring activities included preconstruction sampling and testing, and CQA activities associated with monitoring of the subgrade preparation. Ranger personnel typically worked 10 to 12 hours per day, 6 to 7 days per week.

# 2.0 PROJECT DOCUMENTS AND DESCRIPTION

## 2.1 Project Specifications and Drawings

Golder monitored the composite clay and geomembrane liner construction for FGD-B Pond at the Oak Grove SES Power Station utilizing construction drawings and quality assurance documents prepared by Golder.

## 2.2 Project Description

The liner area in plan view is approximately 492,900 square feet or 11.3 acres. The project specifications required the construction of a minimum 2-foot thick clay liner on the FGD-B Pond floor and slopes [3(H):1(V)] overlain by a textured 60-mil high-density polyethylene (HDPE) geomembrane and a 1-foot thick protective cover soil layer. The certification drawing provided by SAM is included as Figure 12. CQA soil testing was performed according to the project plans, specifications and QCP.

An overflow pipe consisting of a 12-inch diameter HDPE SDR17 pipe was installed between the FGD-A and FGB-B Ponds. The pipe inlet in FGD-A Pond is at elevation 442 feet, MSL and details are presented on Figure 9. Photographs are included in Appendix N.

# 3.0 EARTHWORKS CONSTRUCTION QUALITY ASSURANCE ACTIVITIES

The CQA monitoring and testing performed by Golder for the structural fill and clay liner construction consisted of the following activities:

- Participation in the preconstruction and weekly progress meetings between Luminant, Ranger, and Golder, prior to and during construction of the clay liner;
- Collection of preconstruction samples of potential material to be used for the construction of the structural fill and clay liner;
- Observation and documentation of construction procedures during construction of the structural fill and clay liner;
- Performance of field moisture/density tests on the structural fill and clay liner;
- Acquisition of thin wall tube samples and performance of hydraulic conductivity tests on each lift during clay liner construction;
- Determination of Atterberg limits and particle size distribution (sieve analysis) of clay liner material; and
- Review of survey data for grade control and clay liner thickness verification.

A description of each of the above activities with a summary of the observations is presented in the following sections. A photograph log showing various construction activities is included in Appendix N. The actual number of quality assurance tests performed for this project met or exceeded the minimum number required for compliance with the QCP.

## 3.1 Preconstruction and Construction Sampling and Laboratory Testing

Prior to the use of site soils for the construction of the FGD-B Pond clay liner, samples were obtained from on-site borrow areas in conjunction with the FGD-B Pond clay liner construction. The soil tests were performed in Golder Associates Inc. geotechnical laboratory in Houston, Texas or Atlanta, Georgia. Testing included moisture content (ASTM D2216), particle size analyses (ASTM D 422) and Atterberg limits (ASTM D 4318). Moisture/density relationships (ASTM D 698) were developed for use during construction to document that the percent compaction and moisture content achieved in the field met the requirements of the project specifications and QCP. Hydraulic conductivity tests ASTM D 5084 - Method F (Houston) were performed on remolded specimens as required by the QCP. The test results showed the proposed material was suitable for clay liner construction. The laboratory preconstruction test results are provided in Appendix B.

## 3.2 Structural Fill

Field moisture/density tests were performed using a nuclear density gauge (ASTM D 2922 and ASTM D 3017) to determine whether the project specifications for compaction had been achieved. The minimum number of density tests required for compliance with the project specifications was one test per 5,000

cubic yards of fill material. A total of 434 field moisture/density tests were performed on the structural fill exceeding the minimum requirement for approximately 150,000 cubic yards of material.

The degree of compaction achieved in the field was computed on the basis of the dry density of the soil tested in the fill and the appropriate density standard developed in the laboratory for the subgrade material. The initial 6 lifts of structural fill were placed at a minimum of 95 percent of the maximum dry density (MDD) to bridge over soft subgrade soils. The remaining structural fill was placed at a minimum of 95 percent MDD and +3 to -3 percent of the optimum moisture content. Holes in the subgrade formed by the mandrel used for the nuclear density test were backfilled with bentonite powder. A summary of the structural fill density test data is included in Appendix C.

## 3.3 Clay Liner Construction Procedures

Construction of the FGD-B Pond clay liner generally progressed in the following manner:

- Clay liner material was excavated from the on-site clay borrow source with track-mounted excavators and hauled to the placement area in articulated dump trucks. Material was dumped and spread in loose lifts of approximately 8-inches thick. Loose lift thickness was monitored by Golder;
- Soil clods were broken down by the blade and tracks of the bulldozer as the lift was struck to the proper thickness. A water wagon was used to moisture condition the soils when it was necessary to add water following placement in the impoundment;
- The clay was compacted using a CAT 815B tamping-foot roller;
- Prior to placement of subsequent lifts, the soil surface was watered as needed and then roughened by the cleats of the compactor to facilitate a good interlift bond; and
- Throughout construction of the clay liner, water was added as necessary to the surface of previous lifts to prevent excessive drying under the elements of weather.

The above procedures were followed for each lift of the FGD-B Pond clay liner. Four complete lifts were placed across the impoundment for the compacted clay liner with each compacted lift being approximately 6-inches thick. The final surface of the uppermost lift was smoothed using a steel drum roller after the required density had been achieved. A final survey was performed of the prepared clay liner surface for the purpose of thickness verification.

## 3.4 Field Moisture/Density Tests

The field moisture/density tests were performed using a nuclear density gauge (ASTM D 2922 and ASTM D 3017) to determine whether the project specifications for compaction and moisture content had been achieved. Additional field moisture/density tests were performed using a drive ring (ASTM D 2937) method. The drive ring tests were periodically performed in conjunction with the nuclear density gauge to verify the results. The degree of compaction achieved in the field was computed on the basis of the dry density of the soil tested in the fill and the appropriate density standard developed in the laboratory for the

clay material. Holes in the clay liner formed by the mandrel used for the nuclear density test were backfilled with bentonite powder, and holes formed by the drive cylinder were backfilled and compacted with a bentonite/clay mixture.

Project specifications for the construction of the FGD-B Pond clay liner required that the material be placed between 2 to 6 percent above the optimum moisture content and compacted to a minimum of 95 percent of the maximum dry density as determined by the standard Proctor moisture/density test (ASTM D 698). The minimum number of density tests required for compliance with the QCP was 62 tests per lift via the nuclear gauge method and a total of 4 via the drive ring method. A minimum of 67 field moisture/density tests per lift were performed via the nuclear gauge method. A total of 12 field moisture/density tests via the drive ring method were performed.

A summary of the clay liner density test data is included in Appendix D. The moisture/density reference curves (standard Proctor) are presented in Appendix B. The locations of each clay liner field moisture/density test are presented on Figures 3 through 6 for Lifts 1 through 4, respectively.

In accordance with the QCP, nuclear density gauge moisture content measurements were compared with oven/microwave moisture contents. The results are provided in Appendix E.

Additionally the trench backfill for the overflow pipe consisting installed between the FGD-A and FGB-B Ponds was placed and tested in accordance with clay liner specifications. The density test data is also included in Appendix D.

## 3.5 Hydraulic Conductivity Sampling and Testing

To comply with the project specifications and permit requirements, one hydraulic conductivity test was required for every 40,000 square feet of compacted clay liner, for each 6-inch (compacted) lift. This equates to 13 tests per lift. A minimum of 13 hydraulic conductivity tests were performed on samples collected from each of Lifts 1 through 4. The samples were obtained by pushing a thin-walled tube (ASTM D1587) into the clay liner. The sample was sent to and tested at Golder's Atlanta, Georgia or Houston, Texas geotechnical laboratory. The coefficient of hydraulic conductivity was determined according to ASTM D 5084 -Method D (Atlanta) or Method F (Houston). The holes formed in the clay liner by the thin-walled tubes were backfilled with a bentonite/clay mixture and compacted. Project specifications for the construction of the FGD-B Pond clay liner required in-place material to have a hydraulic conductivity of no greater than $1.0 \times 10^{-7}$ centimeters per second (cm/sec).

The laboratory data for the clay liner hydraulic conductivity for the FGD-B Pond are provided in Appendix B.

## 3.6 Atterberg Limits/Sieve Analysis Sampling and Testing

To comply with the project specifications and permit requirements, one Atterberg limits (ASTM D 4318) and sieve analysis (ASTM D 422) were required for every 50,000 square feet of compacted clay liner, for each 6-inch (compacted) lift. This equates to 10 tests per lift. A minimum of 13 Atterberg limits and sieve analysis were performed on samples collected from each of Lifts 1 through 4. Project specifications for the clay liner required that the material used exhibit a liquid limit of no less than 30 percent, a plasticity index of no less than 15 percent, and that the soil fraction passing the No. 200 sieve be no less than 30 percent.

The clay liner Atterberg limits and percentage of fines (soil fraction smaller than 0.074 mm, which corresponds to the No. 200 sieve) laboratory test results are provided in Appendix B.

## 3.7 Thickness Verification

Clay liner thickness was verified by means of an engineering survey, performed by SAM, at points located on a 50-foot grid. Additional data was collected at break lines in the grade of the impoundment floor and at other points which would have otherwise fallen between the points on the grid. These points were compared to the bottom of liner points surveyed on the surface of the subgrade prior to clay liner construction. The SAM thickness verification survey drawing for the FGD-B Pond clay liner is presented as Figure 12.

## 4.0 GEOMEMBRANE QUALITY ASSURANCE ACTIVITIES

The quality assurance monitoring and testing performed by Golder Associates Inc. for geomembrane installation consisted of the following activities:

- Participating in the weekly progress meetings prior to and during installation of the geomembrane;
- Reviewing manufacturer's raw materials and geomembrane roll quality control documents;
- Observing the soil liner surface to verify that the surface was generally free of irregularities, protrusions and loose soil;
- Observing the anchor trench excavation to verify that the surface was free of loose soil;
- Observing and documenting geomembrane panel placement and verifying thickness during panel deployment;
- Observing and documenting trial seam procedures and evaluating test results;
- Observing and documenting field seams and seaming operations;
- Observing and documenting non-destructive seam continuity testing;
- Locating and documenting seam strength destructive test locations;
- Performing destructive tests on geomembrane seams and evaluation of the test results;
- Locating geomembrane panel and seam defects, and observing and documenting repairs;
- Observing and documenting non-destructive continuity testing of repairs;
- Observing backfill placed in the anchor trenches; and
- Observing protective soil cover placement to ensure that no damage was done to the underlying geomembrane.

A description of the CQA activities and a summary of the observations are presented in the following sections.

### 4.1 Geomembrane Material

The geomembrane liner material installed at this site consisted of a nominal 60-mil textured high density polyethylene (HDPE) geomembrane manufactured in approximately 23 foot wide rolls by Poly-Flex, Inc. (Poly-Flex) A total area of approximately 492,900 square feet of this geomembrane was deployed. Golder Associates' personnel inventoried all of the geomembrane material, and a complete inventory list is presented in Appendix F. Copies of the geomembrane resin and roll quality control documents from Poly-Flex are included in Appendix G. All test values reported by Poly-Flex for the geomembrane met the project specifications.

### 4.2 Soil Liner Surface

Prior to deployment of the geomembrane, Ranger, who had constructed the clay liner, maintained the soil liner surface. The surface of the soil liner was rolled smooth with a steel drum roller and maintained in a

moist condition by a water truck to prevent desiccation. Prior to deployment of the geomembrane the surface was examined by Golder and TEP personnel for any objects that could potentially damage the geomembrane, and any such objects found were removed. Subgrade acceptance certificates are presented in Appendix H.

## 4.3 Geomembrane Deployment

Geomembrane panels were deployed using a rubber tired front end loader with a spreader bar to unroll the geomembrane, and the panels were placed into final position by use of man power. Panels were aligned with a minimum 6 inch overlap. Free edges of the geomembrane were temporarily secured with sand bags.

Each geomembrane panel was marked with a field identification number by Golder Associates' CQA personnel. These numbers indicate the order of panel deployment and can be correlated to the manufacturer's roll number using the panel deployment summary in Appendix I. A plan view of the geomembrane panel layout is shown on Figures 7 and 8.

Each panel was visually examined for manufacturing defects and installation damage. Defects were marked, recorded and subsequently repaired. Panel thickness measurements were taken by Golder Associates' CQA personnel with a micrometer at locations on the leading edge of each panel. Results of field thickness measurements are included in Appendix I. All measured thickness values were within the range defined in the project specifications.

## 4.4 Geomembrane Trial Seams

The seaming methods used on this project were the dual track fusion welding process and the extrusion welding process. Geomembrane trial seams were made by TEP technicians to test the seaming apparatus (welding machines) and operator's performance under daily site conditions. Trial seams were made each day prior to the start of field seaming in the morning and following the mid-day break.

Specimens from each trial seam were quantitatively and qualitatively field tested by TEP: 3 for peel adhesion (peel) and 3 for bonded seam strength (shear), using a portable field tensile testing machine. The separation mode for each test specimen was classified and documented according to the codes shown on Figures 10 and 11, for dual track fusion and extrusion welds respectively. A summary of the trial seam test results is presented in Appendix J. In the event of a failing test, a second trial seam was made and tested prior to implementation of the welding machine. If the second trial seam failed, two consecutive passing trial seams were required prior to the start of field production seaming.

Golder Associates' personnel observed trial seaming procedures and the testing of all specimens from the trial seams.

## 4.5 Geomembrane Seaming

The principal seaming method used on this project was the dual track fusion welding process. The extrusion welding process was used for making repairs, and capping inadequate fusion welds.

Golder Associates' personnel observed seaming operations on a routine basis. The observations consisted of checking for proper sheet overlap and periodically checking the seam area to verify that the surface was prepared properly and that the surface area was kept free of moisture, dust, dirt, and debris. All seams were examined for visual quality and seam completion. Visually detected imperfections were marked and subsequently repaired. A summary of the geomembrane seaming data collected by Golder Associates' CQA personnel is presented in Appendix K.

## 4.6 Seam Strength Destructive Testing

Geomembrane seam strength destructive test samples were taken at a frequency of at least one per 500 lineal feet of seam. Test locations were selected by Golder Associates' CQA personnel based on the progress of each welding machine and observations of the welding operations. After the sample was obtained in the field, specimens were removed from a portion of each sample for preliminary field tests and the remainder of the sample was held for subsequent testing. If the preliminary field tests met the project requirements, the sample was then tested for seam strength by TEP. These samples were also tested by Golder in the Golder Associates laboratory in Atlanta, Ga. If the preliminary field tests failed to meet the project requirements, additional locations were identified for destructive test samples as part of the procedure for tracking a below specification seam. Portions of each destructive sample were retained for the RSI archives. For each of the destructive samples, 10 specimens were removed for testing. Five (5) specimens were tested for peel adhesion (peel) and 5 specimens were tested for bonded seam strength (shear).

The acceptance criteria for both bonded shear strength and peel adhesion was that 4 out of the 5 specimens tested under each condition had to meet the minimum specified strength value and that the average strength values of each set of 5 specimens must meet the specifications. The strength criteria for an acceptable shear test was that the specimen had to exhibit a strength greater than 120 pounds per inch; further, the strain at break greater than 50 percent. Additionally, the specimen had to exhibit an acceptable break code. The criterion for an acceptable peel test was that the specimen had to exhibit a strength greater than 78 pounds per inch for an extrusion weld and a strength greater than 91 pounds per inch for an fusion weld, and also exhibit an acceptable break code. Both tracks of dual track fusion welded seams were tested in peel. Separation modes for the test specimens were reported according to the modes shown on Figures 10 and 11.

The total length of fusion welded seams (not including repairs) was approximately 25,017 feet, which corresponds to a minimum number of destructive seam strength tests of 51 at a frequency of one per 500

linear feet of seam. Initially Golder Associates' monitors located 51 areas for destructive seam strength testing. A total of 1,620 feet of extrusion welding was performed in the repairs of defects (greater than 10 feet in length) requiring an additional 4 destructive tests of extrusion welds at a frequency of one per 500 feet. A total of 54 fusion destructive seam tests and 6 extrusion destructive tests were performed for this project.

In the case of a passing destructive test, a patch was welded over the area from which the sample was taken. In the case of a failing test, additional samples were taken from seams or repairs completed by the same seamer and/or seaming apparatus which were seamed before and after the failed area. All destructive seam strength samples were tested by Golder Associates in Golder's Atlanta, Georgia laboratory. A summary of the destructive test results for geomembrane seam samples is included in Appendix L, and the locations are shown on Figure 7.

Failing tests were tracked and bound by performing additional tests performed on samples located a minimum of approximately 10 feet away, (in both directions), from the failing destructive test. Once the failed area was bracketed by passing test, the failed seam length was repaired by capping the seam.

## 4.7 Non-Destructive Seam Continuity Testing

Geomembrane seams and seam repairs were tested for continuity by TEP. The air pressure method was used for dual track fusion welds, and the vacuum box method was used for extrusion welds.

Golder Associates' CQA personnel observed and documented non-destructive testing of seams and seam repairs on a full time basis. A summary of non-destructive testing of seams is included in the geomembrane seam summary presented in Appendix K. All tested seam lengths and repairs passed the project non-destructive testing requirements.

## 4.8 Geomembrane Defects and Repairs

Each geomembrane panel and seam was visually observed for defects. The term "defect" refers to manufacturing blemishes, installation damage including burns and creases, incomplete seaming, wrinkles and fish mouths. Defect identification codes were also assigned to multiple panel intersection points, as the project documents required patches at these locations. These observations were made on an on-going basis throughout the installation process.

Defects were logged by Golder Associates' personnel, who also observed repair operations performed by TEP. These observations were made to verify that all noted defects were repaired and documented. A summary of defects and repairs is contained in Appendix M, and the locations of repairs are shown on Figure 8.

TEP welded patches at destructive seam strength sample locations, at holes created during installation, in areas of insufficient overlap for seaming, and at intersecting fusion-welded seams ("T's"). Spot welds were made by the installer to small isolated manufacturing blemishes, creases and minor scratches on the geomembrane panels. Minor defects in extruded seams were repaired by lightly grinding and rewelding these areas.

## 4.9 Non-Destructive Testing of Repairs

TEP non-destructively tested geomembrane defects, patches and panel repairs for continuity. The vacuum box method was used for all such testing.

Golder Associates' CQA personnel observed and documented non-destructive testing of defects and repairs on a full time basis. A summary of non-destructive testing of defects and repairs is presented in the Repair Summary in Appendix M.

## 5.0 ANCHOR TRENCHES

The geosynthetics were anchored in a trench above the slopes. The anchor trench was approximately 2 feet wide by 2 feet deep. The anchor trench detail is shown on Figure 9. The soil removed from the anchor trench was used as backfill. Soil was placed in loose lifts and compacted using the rubber tires of a backhoe. Care was taken to verify that no damage was inflicted to the geosynthetics in the anchor trenches as a result of the backfilling operations, which was verified by Golder personnel.

## 6.0 PROTECTIVE SOIL COVER

A protective soil cover, consisting of a minimum one foot of soil, was placed over the geomembrane. Placement of the protective soil cover and construction were observed by Golder Associates' personnel to verify that the geosynthetics were not damaged by construction equipment. The SAM thickness verification survey drawing for the FGD-B Pond protective cover is presented as Figure 12.

## 7.0 SUMMARY

Golder Associates Inc. (Golder) was retained by Luminant to provide third party Construction Quality Assurance (CQA) monitoring and testing services during the construction of the composite liner for the FGD-B Pond at the Oak Grove SES Power Plant. The CQA monitoring and testing services consisted of the following activities:

- Participating in and documenting the preconstruction and weekly construction progress meetings;
- Preconstruction sampling and testing of clay materials;
- Monitoring and documenting clay liner subgrade preparation;
- Monitoring and documenting clay liner construction procedures;
- Performing field moisture/density tests (including dive ring tests) on the prepared subgrade;
- Performing field moisture/density tests (including drive ring tests) on the compacted clay liner;
- Collecting and testing clay liner samples for hydraulic conductivity for the compacted clay liner;
- Collecting and testing sets of Atterberg limits and sieve analyses for the compacted clay liner;
- Reviewing survey data for thickness verification;
- Monitoring and documenting soil liner surface preparation;
- Monitoring and documenting geomembrane deployment;
- Monitoring and documenting trial and field seaming;
- Monitoring and documenting non-destructive seam continuity testing;
- Monitoring and documenting geomembrane repair procedures; and
- Monitoring and documenting installation of the protective cover.

Based on the observations and testing performed by Golder during the monitoring of the FGD-B Pond subgrade preparation and clay liner construction, it is in Golder's opinion that the liner was constructed in compliance with the project plans, specifications and Contractors Quality Assurance/Quality Control Plan (QCP).

Sincerely,
**GOLDER ASSOCIATES INC.**

## NOTES

1. COMPACTED CRUSHED STONE ROAD BASE.
2. USE FABRICATED PIPE FITTINGS WHERE 30' (MIN.) BEND RADIUS IS EXCEEDED.
3. PROTECTIVE COVER WILL CONSIST OF ONSITE SOILS.

## SCHEMATIC OF UNTESTED SPECIMEN

| Types of Failure | Locus-of-Break Code | Break |
|---|---|---|
|  | AD | Adhesion failure. |
|  | BRK | Break in sheeting. Break can be in either top or bottom sheet. |
|  | SE1 | Break at outer edge of seam. Break can be in either top or bottom sheet. |
|  | SE2 | Break at inner edge of seam through both sheets. |
|  | AD-BRK | Break in first seam after some adhesion failure. Break can be in either the top or bottom sheet. |
|  | SIP | Separation in the plane of the sheet. Break can be in either top or bottom sheet. |

## UNTESTED SPECIMEN
## EXTRUSION WELD WITH LEISTER HEAT SEAM

| Types of Break | Locus-of-Break Code | Break Description |
|---|---|---|
| | AD1 | Failure in adhesion. Specimans may also delaminate under the bead and break through the thin extruded material in the outer area. |
| | AD2 | Failure in Adhesion. |
|   | AD-WLD | Breaks through the fillet. Breaks through the fillet range from breaks starting at the edge of the the top sheet to breaks through the fillet after some adhesion failure between the fillet and the bottom sheet. |
| | SE1 | Break at seam edge in the bottom sheet. Specimens may break anywhere from the bead/outer area edge to the outer area/ buffed area. (Applicable to sheer only). |
| | SE2 | Break at seam edge in the top sheet. Specimens may break anywhere from the bead/ outer area edge to the outer area/buffed area. (Applicable to sheer only). |
|  | SE3 | Break at seam edge in the bottom sheet. (Applicable to peel only). |
|  | BRK1 | Break in the bottom sheeting. A "B" in parenthesis following the code means the specimen broke in the buffed area. (Applicable to sheer only). |
| | BRK2 | Break in the top sheeting. A "B" in parenthesis following the code means the speciman broke in the buffed area. |
| | AD-BRK | Break in the bottom sheeting after some adhesion failure between the fillet and the bottom sheet. (Applicable to peel only). |
| | HT | Break at the edge of the hot tack for specimens which could not be delaminated in the hot tack. |
| | SIP | Separation in the plane of the sheet. |

## Education

*Bachelor of Science Civil Engineering, Texas A&M University, Texas, 1980*

*Continuing Engineering Studies Landfill Leachate and Gas Management Design, University of Florida, 1992*

*Continuing Education Technical and Business Writing, Murray Associates. 1989*

*Continuing Engineering Studies Clay Liners and Covers for Waste Disposal Facilities, University of Texas, Texas, 1989*

## Certifications

*Professional Engineer, Arkansas #9447*

*Professional Engineer, Mississippi #14154*

*Professional Engineer, Louisiana #27506*

*Professional Engineer, Oklahoma #18401*

*Professional Engineer, Texas #62392*

## Languages

*English – Fluent*

# Employment History

***Golder Associates Inc. – Houston, Texas***
*Associate (1995 to Present)*

Responsibilities include engineering and managing environmental, geotechnical, and construction quality assurance (CQA) projects. Projects have involved design and CQA for coal power plant ash landfills and surface impoundments, and municipal solid and hazardous waste landfill construction including the design and CQA services for containment cells and landfill gas systems.

***Harding Lawson Associates – Houston, Texas***
*Senior Engineer (1986 to 1995)*

Responsibilities included engineering and managing various environmental, geotechnical, and construction quality assurance projects. Projects included:

Municipal solid waste landfill construction quality assurance
Hazardous waste landfill construction quality assurance
Hazardous landfill site feasibility study
Hydrogeologic investigations
Geotechnical investigation and shallow foundation design
Hazardous facility/unit closures
Environmental site assessment and compliance audits
Environmental site investigation and remediation
Underground storage tank investigations and closures

***Fugro Inter, Inc. – Houston, Texas***
*Project Engineer (1980 to 1986)*

Responsibilities included engineering and managing offshore geotechnical projects. Projects included:

Geotechnical investigation and foundation design for offshore platforms
Jack-up rig foundation investigations

## PROJECT EXPERIENCE – POWER

Project Manager for a viewshed analysis for the potential vertical expansion of the Luminant Oak Grove SES Ash Landfill including providing the client with a viewshed map showing the Zone of Theoretical Visibility (ZTV). Photomontages were created showing the project expansion from selected viewpoints. The photomontages rendered views of the proposed expansion and were modeled based on the proposed design and project components. The landfill was superimposed over the photos collected in the field and faded back to show the features blocking the view towards the project (e.g. trees).

Project Manager providing engineering services related to the continuing development of the Luminant Oak Grove SES Ash Landfill. The scope of work included preparation of construction drawings and related documents to support construction of a 30 acre ash landfill cell.

Project manager and engineer of record providing construction quality assurance (CQA) during the construction of a 50 acre ash landfill cell, FGD Pond and Lignite Run-off Pond at the Luminant Oak Grove SES.

Project manager during a screening-level siting evaluation of three potential new flue gas desulfurization (FGD) effluent pond locations at the Luminant Oak Grove SES, including evaluation of constructed liner options and order-of-magnitude costs. The objective was to provide a subjective ranking of each site's suitability, focusing on location restrictions, along with providing budgetary estimates for differing liner designs and overall construction costs.

## PROJECT EXPERIENCE – MUNICIPAL AND HAZARDOUS WASTE LANDFILLS

**Landfill Gas Systems**

Prepared construction drawings and contractor bid documents for landfill gas systems. Directed construction quality assurance of construction services during landfill gas system installation.

**Design and Construction Quality Assurance of Municipal Waste Landfills**

Prepared construction drawings and contractor bid documents for containment cell constructions. Directed construction quality assurance during construction of compacted clay liners. Work has included sampling and testing preconstruction soil, reviewing construction specifications, directing field monitoring staff, providing technical guidance to construction contractors, and preparing certification documents for the owners and state agencies. Work has also included direct monitoring during the installation of geosynthetic liners.

**Hazardous Waste Landfill Site Feasibility Study**

Conducted a study in conjunction with a Material and Area Feasibility Study to evaluate site-specific requirements for the construction of a hazardous waste landfill to meet applicable federal, state, and local regulatory requirements. The study included:

evaluating waste types, volumes, and generation rates
evaluating regulatory criteria
determining specific site considerations and limitations
providing conceptual design alternatives
evaluating and screening of alternatives
designing facility layout
evaluating material quantities and availability
determining construction cost estimates and schedules
evaluating operation and maintenance requirements

**Construction Quality Assurance of Hazardous Waste Landfills**

Directed construction quality control during the construction of a hazardous waste landfill cell. Work included reviewing construction specifications, fulfilling daily project management duties, directing field technicians, reviewing field documentation, and communicating with landfill personnel.

**Construction and Testing of Soil Test Pads**

Directed the construction and subsequent testing of clay and betonite amended soil test pads. The purpose of the test pads was to establish construction procedures for landfill liner systems and to demonstrate that the pad, constructed under specific controlled repeatable conditions, could achieve a specified hydraulic conductivity. Testing procedures for determining hydraulic conductivity included sealed double-ring infiltrometers, Boutwell permeameters, and laboratory permeability tests on selected samples.

## PROJECT EXPERIENCE – REPRESENTATIVE PROJECTS

**Site Assessments**

Project Manager on over 20 environmental site investigations for underground storage tanks. Project included drilling and sampling soil borings, installing groundwater monitor wells, conducting site hydrogeologic characterizations, analyzing soil and groundwater, and providing recommendations for site remediation.

Project Engineer on a project for site characterization of an abandoned hazardous waste disposal site located in Niagara Falls, New York. Under strict health and safety protocol, conducted site exploration, which included completing a buried metals survey, drilling and sampling, and installing groundwater monitoring wells.

Project Engineer for environmental site investigation. Duties included drilling and sampling soil borings, installing groundwater monitoring wells, assessing soil and groundwater contamination, developing closure plan, and implementing clean-up of an abandoned pit containing paint manufacturing waste and solvents. Clean closure involved excavating and disposing of approximately 3,500 cubic yards of Class I and Class II waste.

Senior Engineer responsible for collecting and classifying soil samples on inactive artillery/firing ranges at Fort Ord Army Base. Analyzed soils for explosives and metals. The work was performed under strict health and safety protocol due to live ornaments and biohazards.

Project Manager responsible for assessing and cleaning of a chemical spill beneath a hospital building. The spill material was an x-ray film development solution.

Senior Engineer providing oversight and recommendations for the cleanup of a marsh adjacent to a Superfund site.

**Facility/Unit Closures**

Project Manager responsible for constructing of a clay test pad to establish the construction procedure for a clay cover and liner system. The test pad demonstrated that a cover and liner constructed under specific controllable and repeatable conditions could attain a hydraulic conductivity of 1 x 10-7 cm/sec or less, as determined by in-situ sealed double-ring infiltrometer (SDRI) testing performed as a part of this project. Four SDRI's were installed on the test pad. Prepared a report for the client to present to the Texas Water Commission.

Project Manager responsible for providing Construction Quality Control (CDC) during construction of a clay cover for a RCRA closure of two hazardous waste surface impoundments. Project duties included monitoring the construction operations, providing quality control to comply with project specifications, and communicating with the facility personnel and contractors.

Project Manager responsible for providing CQC during construction of a clay liner for a storm water pond facility. Project duties included monitoring the construction operations, providing quality control to comply with project specifications, and communicating with the facility personnel and contractors.

Senior Engineer responsible for the RCRA closure of a hazardous waste incinerator and feed tank. Project duties included supervising the field crew, monitoring the decontamination operations, collecting verification samples, and preparing and submitting the certification report to the Texas Water Commission.

Developed a closure and contingency plan for 16 hazardous waste treatment/storage units at an industrial wastewater treatment facility.

**Underground Storage Tanks**

Project Engineer for closure of a leaking underground storage tank (UST) discovered during construction of Metro's Northwest Transit Center project in Houston, Texas. Project included performing electromagnetometer and ground penetrating radar surveys to clear work areas of other USTs.

**Preliminary Site Assessments**

Performed an Environmental Hazardous Materials Site Assessment to identify potential environmental concerns at three truck stop sites. The assessment included reviewing the site history and available data, conducting a regulatory agency review, completing a site visit, and performing off-site reconnaissance.

Performed an environmental site assessment (ESA) to identify potential environmental concerns for properties prior to real estate transactions. The ESA included reviewing the site history and available data, conducting regulatory agency review, completing a site visit, and performing off-site reconnaissance.

**Landfill Construction**

Project Engineer responsible for providing CQC during the construction of two soil/bentonite test liners to establish the construction procedures for a landfill liner system. Provided significant guidance to the contractor who was inexperienced in constructing liners with soils available at the site. The purpose of the test liners was to demonstrate that the designed soil/bentonite liner, constructed under specific controlled repeatable conditions, could attain a hydraulic conductivity of 1 x 10-6 cm/sec or less. Intalled and monitored two in-situ sealed double-ring infiltrometer (SDRI) units on each test liner to determine the hydraulic conductivity.

Project Manager providing Construction Quality Assurance (CQA) services during construction of a cell at a hazardous waste landfill in Oklahoma. Duties included reviewing construction specifications, fulfilling daily project management duties, providing guidance for the field technicians, reviewing field reports and test results, and communicating with landfill personnel.

Project Manager responsible for overseeing construction of a clay liner for cell expansions at Type I and Type IV landfills. Project duties included monitoring the construction operations, providing quality control to comply with regulatory specifications, and submitting a soil liner evaluation report (SLER) to the state.

Project Manager responsible for providing CQC services during the initial construction of a landfill facility. The project included overseeing and monitoring site grading, constructing detention basins and drainage ditches, and observing and testing concrete poured for spillways, flow channels, and junction boxes.

Senior Engineer responsible for overseeing drilling and sampling pilot soil borings and designing and installing monitor wells for a new landfill facility.

**Construction Monitoring**

Project Engineering responsible for construction surveillance of new fluid milk plant in Austin, Texas. Project involved testing soil and concrete, preparing subgrade, and placing concrete for pavements and foundations. Duties included supervising field test fill, fulfilling daily project management duties, reviewing field reports and test results, and preparing periodic summary reports.

Performed construction surveillance for a jet engine test facility at Ellington Air Force Base, Texas. Project included conducting an on-site inspection of foundation construction and preparing subgrade.

Managed soil and concrete testing for a new church in Houston, Texas. Responsibilities included reviewing field technician's daily reports and test results.

**Geotechnical**

Project Manager responsible for conducting a geotechnical investigation to assess the stability of a containment dike surrounding an above-ground surface impoundment. Duties included supervising the drilling and sampling operations, assigning a laboratory testing program to determine the engineering characteristics of the soils, and preparing a report summarizing the field activities and laboratory testing.

Senior Engineer responsible for preparing a geotechnical and geological assessment for a proposed asbestos pit. Duties included supervising the soils investigation, assigning laboratory testing to evaluate the engineering characteristics of the subsurface soils, and preparing a report providing slope stability analyses and construction recommendations.

Managed field exploration to determine subsurface characteristics and to provide engineering design and construction recommendations for an extraneous water treatment plant for an expansion of a bromine facility in Magnolia, Arkansas.

Managed field exploration for geotechnical investigations at several gasoline service stations. Provided recommendations for foundation support of the service station facilities.

Performed geotechnical investigations for onshore exploratory drilling rigs. Used cone penetration testing (CPT), interpreted CPT data, and calculated axial capacities for pile foundations.

Participated in dynamic compaction investigation for levee design using cone penetration testing (CPT). Responsible for aquiring soils data and reporting.

Supervised more than 65 onshore and offshore projects including mobilization of equipment, site investigation and demobilization. Duties included classifying soil samples, performing field tests, and preparing field reports.

Performed engineering analyses and developed recommendations for foundation design on over 40 offshore projects. Analyses included axial pile capacity, lateral soil resistance, load transfer, mudline bearing capacity, and pile driveability.

Performed over 40 jack-up rig foundation investigations. Supervised drilling and soil sampling operations. Analyses included estimating leg penetrations after preloading, and assessing rig stability with respect to punch-through failure.

**Permitting**

Senior Engineer responsible for preparing the Engineering Report, Section III of the Texas Water Commission Permit Application for Hazardous Waste Storage/Processing/Disposal Facility (Part B instructions) for two hazardous waste impoundments.

## TRAINING

***SWANA Landfill Gas Systems Operation & Maintenance Training***

## PROFESSIONAL AFFILIATIONS

American Society of Civil Engineers, Member

## Education

*University of Alabama*
*(1997 – 2000)*

## Certifications

*Radiation Safety and Use of Nuclear Gauges*

*N.I.C.E.T. Level 2 Geosynthetics Installation and Inspection*

*N.I.C.E.T Level 1 Geotechnical Construction*

*HAZWOPER 24 Hr.*

*Confined Space Entry Certification*

*SWANA Landfill Gas Systems Operations & Maintenance Training*

*GSI Certification*

*DOT Radiation Certification*

## Education

*University of Alabama*
*(1997 – 2000)*

# Employment History

***Golder Associates Inc. – Houston, Texas***
*Engineering Technician (2000 to Present)*

Resident CQA Manager and CQA Technician during construction of composite lining systems at solid and hazardous waste landfill facilities in Arkansas, Alabama, California, West Virginia, Virginia, Louisiana Texas, South America, and Mexico. Responsibilities on these projects include management of field data, monitoring construction/installation of the soil and synthetic lining systems, communication with client and contractor, and assistance with report preparation. Experience totalling over fifty million square feet of geomembrane installation and over one million cubic yards of soil placement. Conducted a variety of soil tests at the Golder Associates laboratory in Houston, Texas. Also has experience with total station survey.

Specific Project Responsibilities include:

- Lead Soils Technician, Solid Waste Landfill, King George County, Virginia
- Geosynthetics Technician, Solid Waste Landfill, King George County, Virginia
- Resident CQA Manager, Chemical Waste Management, Lake Charles, Louisiana
- Geosynthetics Technician, Solid Waste Landfill, Security, Texas
- MQA Monitor, Poly-Flex, Grand Prairie, Texas
- Geosynthetics Technician, Atascocita Landfill, Houston, Texas
- Resident CQA Manager, Mt. Storm Power Plant, Mt. Storm, West Virginia
- Resident CQA Manager, U.S. Liquids, Zapata County, Texas
- Resident CQA Manager, De Kalb County Landfill, Collinsville, Alabama
- Geosynthetics Technician, Newton County Landfill, Newton County, Texas
- Resident CQA Manager, LaSalle- Grant Parrish Landfill, Jena, Louisiana
- Geosynthetics Technician, Lacy Lakeview Landfill, Waco, Texas
- Resident CQA Manager, El Sobrante Landfill, Corona, California
- Resident CQA Manger, Union County Landfill, El Dorado, Arkansas
- Resident CQA Manager, Greenshadow Landfill, Pasadena, Texas
- Geosynthetics Technician, US Liquids Rincon, Starr County, Texas
- Resident CQA Manager, Dow Chemical, Freeport, Texas
- Resident CQA Manager, Coastal Plains Recycling and Disposal Facility, Alvin, Texas
- Resident CQA Manager, Austin Community Landfill, Austin, Texas
- Geosynthetic Technician, Alto Chicama Lima, Peru
- Resident CQA Manager, Temple LF, Temple, Texas
- Resident CQA Manager, CHESI, Pasadena, Texas
- Resident CQA Manager, City of Victoria Landfill, Victoria, Texas
- Resident CQA Manager, Simi Valley Landfill, Simi Valley, California

## Education

*BS Human Resources, Miami University, Oxford, Ohio, 1992*

## Certifications

*Storm water and Erosion Inspector FDEP, 6/2009*

*CPR/AED/Heartsaver first aid, 11/2008*

*HAZMAT Security Awareness, 7/2009*

*OSHA 30 hour Safety (510), 4/2009*

*United States Corp Of Engineer Construction Quality Management , 9/2008*

*OSHA 40 hour HAZWOPR, 4/2000 (updated 2/2010)*

*OSHA 10 hour Construction Safety, 10/2006*

*GRI Certification Soils, 4/2006*

*GRI Certification Geosynthetics, 4/2006*

*Troxler Certification, 5/2000*

# Golder Associates Inc. – Tampa

***Senior Technician***

Mark Day is a senior technician with Golder Associates and has over 10 years experience performing Construction Quality Assurance (CQA) services for solid waste projects. His responsibilities include performing CQA for soil and geosynthetic components in landfill cell and closure cover system construction, mining leach pads, and landfill gas (LFG) extraction systems. Construction management functions were performed during construction of landfill cell and closure projects and installation LFG systems. Duties also included installation, operation, and maintenance of passive and active LFG systems, including well drilling and pipe installation.

# Employment History

***Golder Associates Inc. – Tampa, Florida***

*Senior Technician (2000 to Present)*

As technician in Solid Waste division, duties varied as the projects changed. Primary responsibilities have been construction quality assurance and construction manager. Projects have ranged from landfill disposal cell and closure caps, tailing facilities, DOE facility, and power plants. Duties have also included installation of passive and active landfill gas extraction systems and well field operation and maintenance. Daily functions include scheduling subcontractors, reviewing pay requests, budgets, submittal review, scheduling, staffing, training, certification report compilation, interaction with state and local government agencies, and client liaison. Position has required the ability to work from construction drawing, CAD file, or engineer's sketches to ensure that projects are constructed to site specifications and working with earth works contractors and maintaining accurate records of deviations from design and contractors' construction activities. Specific duties varied depending on project scope and client needs and have held to position of field technician, construction manager, safety manager and/or resident manager on numerous projects throughout the United States, including Delaware, New York, New Jersey, Pennsylvania, Ohio, Kentucky, Tennessee, North Carolina, Virginia, Florida, Maryland, Texas, and California, as well as Australia.

***Airborne Express – Wilmington, Ohio***

*Recruiter (1999 to 2000)*

Position included recruitment of potential candidates for flight staff, sort staff, fire brigade, cafeteria, custodial services, clerical, and communication. As a recruiter, duties consisted of determining department needs with the department head and filling required opening. Associated activities included conducting off-site recruiting events (school, job fairs); maintaining/establishing contacts with employment offices; and advertising events and openings, interviewing, screening, and referencing potential candidates. Post-selection tasks included employee orientation and employee benefits program, conducting hazard awareness analysis, performance review, documentation in HRIS, and ongoing

human resources issues as additional job responsibilities.

***Macke Brothers – Springdale, Ohio***
*Human Resource Director (1998 to 1999)*

Duties focused on staffing for all three shifts the positions of entry level line assemblers, specialized equipment operators, and clerical staff. Facility is a bindery specializing in magazine and apartment guide production. Responsible for MSDS maintenance, completed safety policy and implemented same. Also did accident investigation, payroll, employee wage review, OSHA 200, hazard analysis, and benefits evaluation.

## PROJECT EXPERIENCE – LANDFILL GAS EXTRACTION INSTALLATION, OPERATION, AND MAINTENANCE

**Millersville Landfill**
Anne Arundel County, Maryland

As technician, installed upgrades to the existing LFG and condensate collection system. Duties also included air quality monitoring, gas detection, well field monitoring, and repair.

## PROJECT EXPERIENCE – CONSTRUCTION QUALITY ASSURANCE

**Crystal River**
Crystal River, Florida

Served as construction quality assurance manager for multi-phase Clean Air Recovery Act construction improvements to Units 4 and 5 at the Crystal River complex of Progress Energy Florida. Project included the monitoring of removal of existing coal stockpiles to install geosynthetic clay liner, construction of runoff and treatment ponds lined with GCL and concrete, geosynthetic clay liner cap to existing fly ash stockpile, and the construction oversight for flue gas blow-down dual-pond construction. Duties included the coordination of CQC and performance of CQA testing, review of submittals, daily and weekly report to client, subcontractor scheduling, and design changes with design engineer. Position encompassed the role of site safety manager for Golder during the 15-month construction project.

**Olympic Dam**
Roxby Downs, South Australia, Australia

As a member of CQA team, responsible for the construction quality assurance oversight of two 140,000-square-meter evaporation ponds. Project consisted of quality assurance for both soils and a 60 mil HDPE. Trained Adelaide technicians in use of Golder USA quality assurance documents to monitor, track, and document installation process. Preformed soils testing and hills compaction verification as needed.

**Department of Energy Oak Ridge Facility**
Oak Ridge, Tennessee

As member of construction quality control team, tasked with CQC of a two-cell, 6-acre low-level radiation landfill. Aspects of project consisted of extensive soils sampling, cut/fill activities, concrete pour sampling, HDPE lift station/manhole and associated leachate collection, and leachate transfer piping. Position required close interaction with CQA, design team, and federal services contractor regarding site specifications issues, problem resolution, geological buffer placement, clay liner placement, HDPE liner installation, scheduling, staffing, lab results, and concrete testing.

**Catawba County MSW**
Catawba County, North Carolina

Quality assurance officer for phases I and II cell expansion. Construction oversight responsibilities included permeability test of clay liner through Shelby tubes, Troxler moisture density tests, soil/product sample collection of structural fill, clay liner material, and drainage layer for 15-acre cell expansion. Position provided liaison between on-site client, soils contractor, geosynthetic contractor, engineer design firm, and Golder Richmond office to ensure project timely completion. Upon completion of earthwork, focus changed to lead for HDPE liner installation and responsibilities consisted of the documentation and observation of HDPE liner-related activities. Position encompassed the role of site safety manager for Golder during the five-month construction project.

**G.R.O.W.S Landfill**
Falls Township, Pennsylvania

As resident manager, provided construction quality assurance oversight of a 10-acre new cell for WMI. Slope of new cell was clay cap of existing hazardous closed cell that was lined with primary and secondary geosynthetic liner. A portion of cell received a tertiary geosynthetic liner as well. Other duties include the documentation of all contractor construction activities, coordination of field staff, weekly progress meeting, and coordinating scheduling efforts between HDPE contractor and earth works contractor. Position encompassed the role of site safety manager for Golder during the seven-month construction project.

**New Morgan Landfill Company**
New Morgan Borough, Pennsylvania

As the CQA manager and construction manager, responsibilities included monitoring and documenting construction efforts of an 11.7-acre municipal solid waste disposal cell with contained 3 feet low perm soil and two layers of 60-mil textured HDPE. Duties included client-designated liaison between state and county environmental oversight agencies, third-party design firm, earthworks contractor, and geosynthetic contractor, as well as documentation and oversight of required tests associated with soils and HDPE aspects. In 2006, returned to construction quality assurance oversight for 17-acre cap work in two phases and related LFG systems improvements. Position encompassed the role of site safety manager for Golder during both construction projects.

**Casella Waste/ Hyland Associates Facility**
Angelica, New York

Responsible for the construction quality assurance oversight of an 11-acre soil and geosynthetic cell. Associated tasks included observation and documentation of HDEP-related activities, soils testing with Troxler nuclear moisture density, conformance sampling of clay liner though the use of Shelby tubes, as well as visual monitoring of construction activities to ensure compliance with site technical specifications . Position required daily interaction with client and state oversight.

**Kettleman Hills Facility**
Kettleman Hills, California

As the CQA manager and construction manager, responsibilities involved coordinating efforts, as well as monitoring and documenting activities between earthworks contractor and two HDPE contractors for two overlapping projects of evaporation pond repair and new cell construction. Project included oversight of upgrades to LFG system. Pond work consisted of capping exposed seams that had been degraded due to weather while the new cell construction was a 12-acre liner over refuse extension. Position encompassed the role of site safety manager for Golder during the five-month construction project.

**Mountain View Reclamation**
Greencastle, Pennsylvania

Responsible for the construction quality assurance oversight to monitor and document construction efforts associated with the installation of a 5.7-acre municipal solid waste disposal cell. Second phase of project consisted of construction quality assurance oversight and construction management of mechanically stabilized earthen wall (MSE), using Tensar uniaxil and biaxil grids.Position encompassed the role of site safety manager for Golder during the 13 month construction project.

**Pinelands Landfill**
Egg Harbor Township, New Jersey

Responsible for construction quality assurance oversight for the removal of existing concrete condensate pump stations and the installation of HDPE CPS. Other functions included flare system upgrades, leachate system maintenance, and oversight during conversion to municipal golf course.

**Countywide Resource Recovery Facility**
Stark County, Ohio

Responsible for the cover system upgrade and for soils quality assurance to the new cell construction. Duties also included quality assurance to leachate collection system and flare system upgrades.

**Victoria County Landfill**
Victoria, Texas

Responsible for the construction quality assurance oversight for the installation of a 6-acre C and D landfill cell. Trained field technicians, coordinated laboratory testing, surveyed, and certified report generation. Position encompassed the role of site safety manager for Golder during the one-month construction project.

# FLEXIBLE WALL TRIAXIAL PERMEABILITY

ASTM D 5084 METHOD F, CONSTANT VOLUME - FALLING HEAD

| | |
|---|---|
| PROJECT TITLE: | Luminant/Oak Grove FGD-B CQA/TX |
| PROJECT NUMBER: | 113-94788.1 |
| SAMPLE ID: | QCL-FGDB-04A |
| LIFT NUMBER: | |

| | | |
|---|---|---|
| Cell Pressure = | 80 | psi |
| Backwater Pressure = | 70 | psi |
| Run Number = | 1 | |

**Sample Data, Initial**

| | | inches |
|---|---|---|
| Height, cm | 8.62 | 3.392 |
| Diameter, cm | 7.29 | 2.871 |
| Area, $cm^2$ | 41.77 | |
| Volume, $cm^3$ | 359.84 | |
| Wet Mass, g | 686.9 | |
| Wt. wet soil + tare, gm | 133.00 | |
| Wt. dry soil + tare, gm | 111.90 | |
| Wt. tare, gm | 9.9 | |
| Moisture Content, % | 20.7% | |
| Dry Density, pcf | 98.7 | |
| Specific Gravity | 2.7 | |
| Void Ratio | 0.71 | |
| Saturation, % | 79.0% | |
| Effective Stress, psi | 10 | |

**Initial Manometer Readings**

Pipette = 27.0

Annulus = 0.35

**Calculation Constants:**

**Manometer Constants:**

$M_1$ = 0.03 $cm^2$

$M_2$ = 1.04

**Sample Constants:**

S = 0.21 $cm^{-1}$

**Specific Gravity Constant:**

G = 12.56

**Test Constant:**

C = 0.0005

$T = M_2/z_1$

where $z_1$ = Pipette reading - annulus reading for each time step

**Sample Data, Final**

| | | inches |
