CCR Surface Impoundment Construction Permit Application Supplement

Illinois Power Generating Company (IPGC) is hereby submitting a supplement to the closure construction permit application submitted on July 28, 2022. Enclosed is an addendum to the Closure Alternatives Assessment (CAA) for Ash Pond No. 1 at IPGC's Coffeen Power Plant which was included in the Final Closure Plan found in Appendix G of the application. The enclosed addendum provides updated information related to the CAA requirements to address the concerns of the local community. A similar addendum was submitted in October 2024.

Should you have any questions or comments regarding the above responses, please contact Rhys Fuller at rhys.fuller@vistracorp.com or (618) 975-1799.

Sincerely,

Phil Morris, P.E.
Sr. Director, Environmental

Closure Alternatives Analysis Addendum

**July 2025 Updated Information Regarding Concerns of Residents
Associated with the Closure Alternatives
[Illinois Administrative Code Section 845.710(b)(4)]**

This document presents an addendum to the Closure Alternatives Assessment (CAA) for Ash Pond No. 1 (AP1) at Illinois Power Generating Company's (IPGC) Coffeen Power Plant property near the City of Coffeen, Illinois, which was submitted to the Illinois Environmental Protection Agency (IEPA) in July 2022 (Gradient, 2022). The CAA was prepared to meet the requirements of Section 845.710 of the Illinois Administrative Code (Title 35, Subtitle G, Chapter I, Subchapter j, Part 845; IEPA, 2021), which requires the development of a CAA prior to undertaking closure activities. The CAA evaluated two specific closure scenarios for AP1: Closure-in-Place (CIP) with coal combustion residual (CCR) excavation and consolidation and Closure-by-Removal (CBR) with a combination of on-Site and off-Site CCR disposal. A wide range of criteria – including the efficiency, reliability, and ease of implementation of the closure scenario, and its potential positive and negative short- and long-term impacts on human health and the environment – were used to evaluate the closure scenarios for AP1 (Gradient, 2022; IEPA, 2021).

One specific requirement of Section 845.710 of the Illinois Administrative Code [845.710(b)(4)] relates to the ability of the closure scenario to address concerns raised by the local community:

The closure alternatives analysis must examine the following for each closure alternative...
[t]he degree to which the concerns of the residents living within communities where the CCR will be handled, transported and disposed of are addressed by the closure method (IEPA, 2021).

The CAA submitted in 2022 (Gradient, 2022) evaluated the closure alternatives with respect to this requirement and concluded that both closure scenarios addressed residents' concerns regarding impacts to groundwater and surface water quality. The CAA identified CIP as the most appropriate closure scenario for AP1 based on all criteria that were evaluated consistent with the requirements of Section 845.710. A public meeting was held on June 14, 2022, during which the results of the CAA were discussed, and community questions were answered.

Since the initial submission of the CAA, IPGC has received hundreds of letters from residents and town officials who live in communities near the Site and along adjacent transportation corridors. Through these letters, local community members have shown overwhelming support for the CIP alternative and raised concerns regarding the activities associated with the CBR alternative. An addendum to the CAA conveying the local community's strong preference for the CIP alternative was submitted to the IEPA in 2024 (Gradient, 2024).

After the initial addendum was prepared, IPGC has continued to receive letters from residents who live in communities near the Site and along adjacent transportation corridors (Figure A.1). These letters (received since the submission of the 2024 addendum), which are attached at the end of this addendum, continue to voice support for the CIP alternative and raise concerns associated with the CBR alternative.

Specifically, local residents consider the CIP closure plan to be a "responsible" plan that "attain[s] all protection standards." On the other hand, they express concerns about the "inherent hazards" (*e.g.*, increase in traffic, safety risk, noise and air pollution) associated with the CBR scenario, which would involve removing and transporting 184,000 cubic yards of coal ash off-site over a period of approximately 2 years. For example, Mr. Phillip Adams from Coffeen, IL writes, "I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways." In particular, many residents who live along the potential truck haul routes are concerned about the adverse impacts of transporting coal ash offsite and have voiced their concerns (Figure A.1).

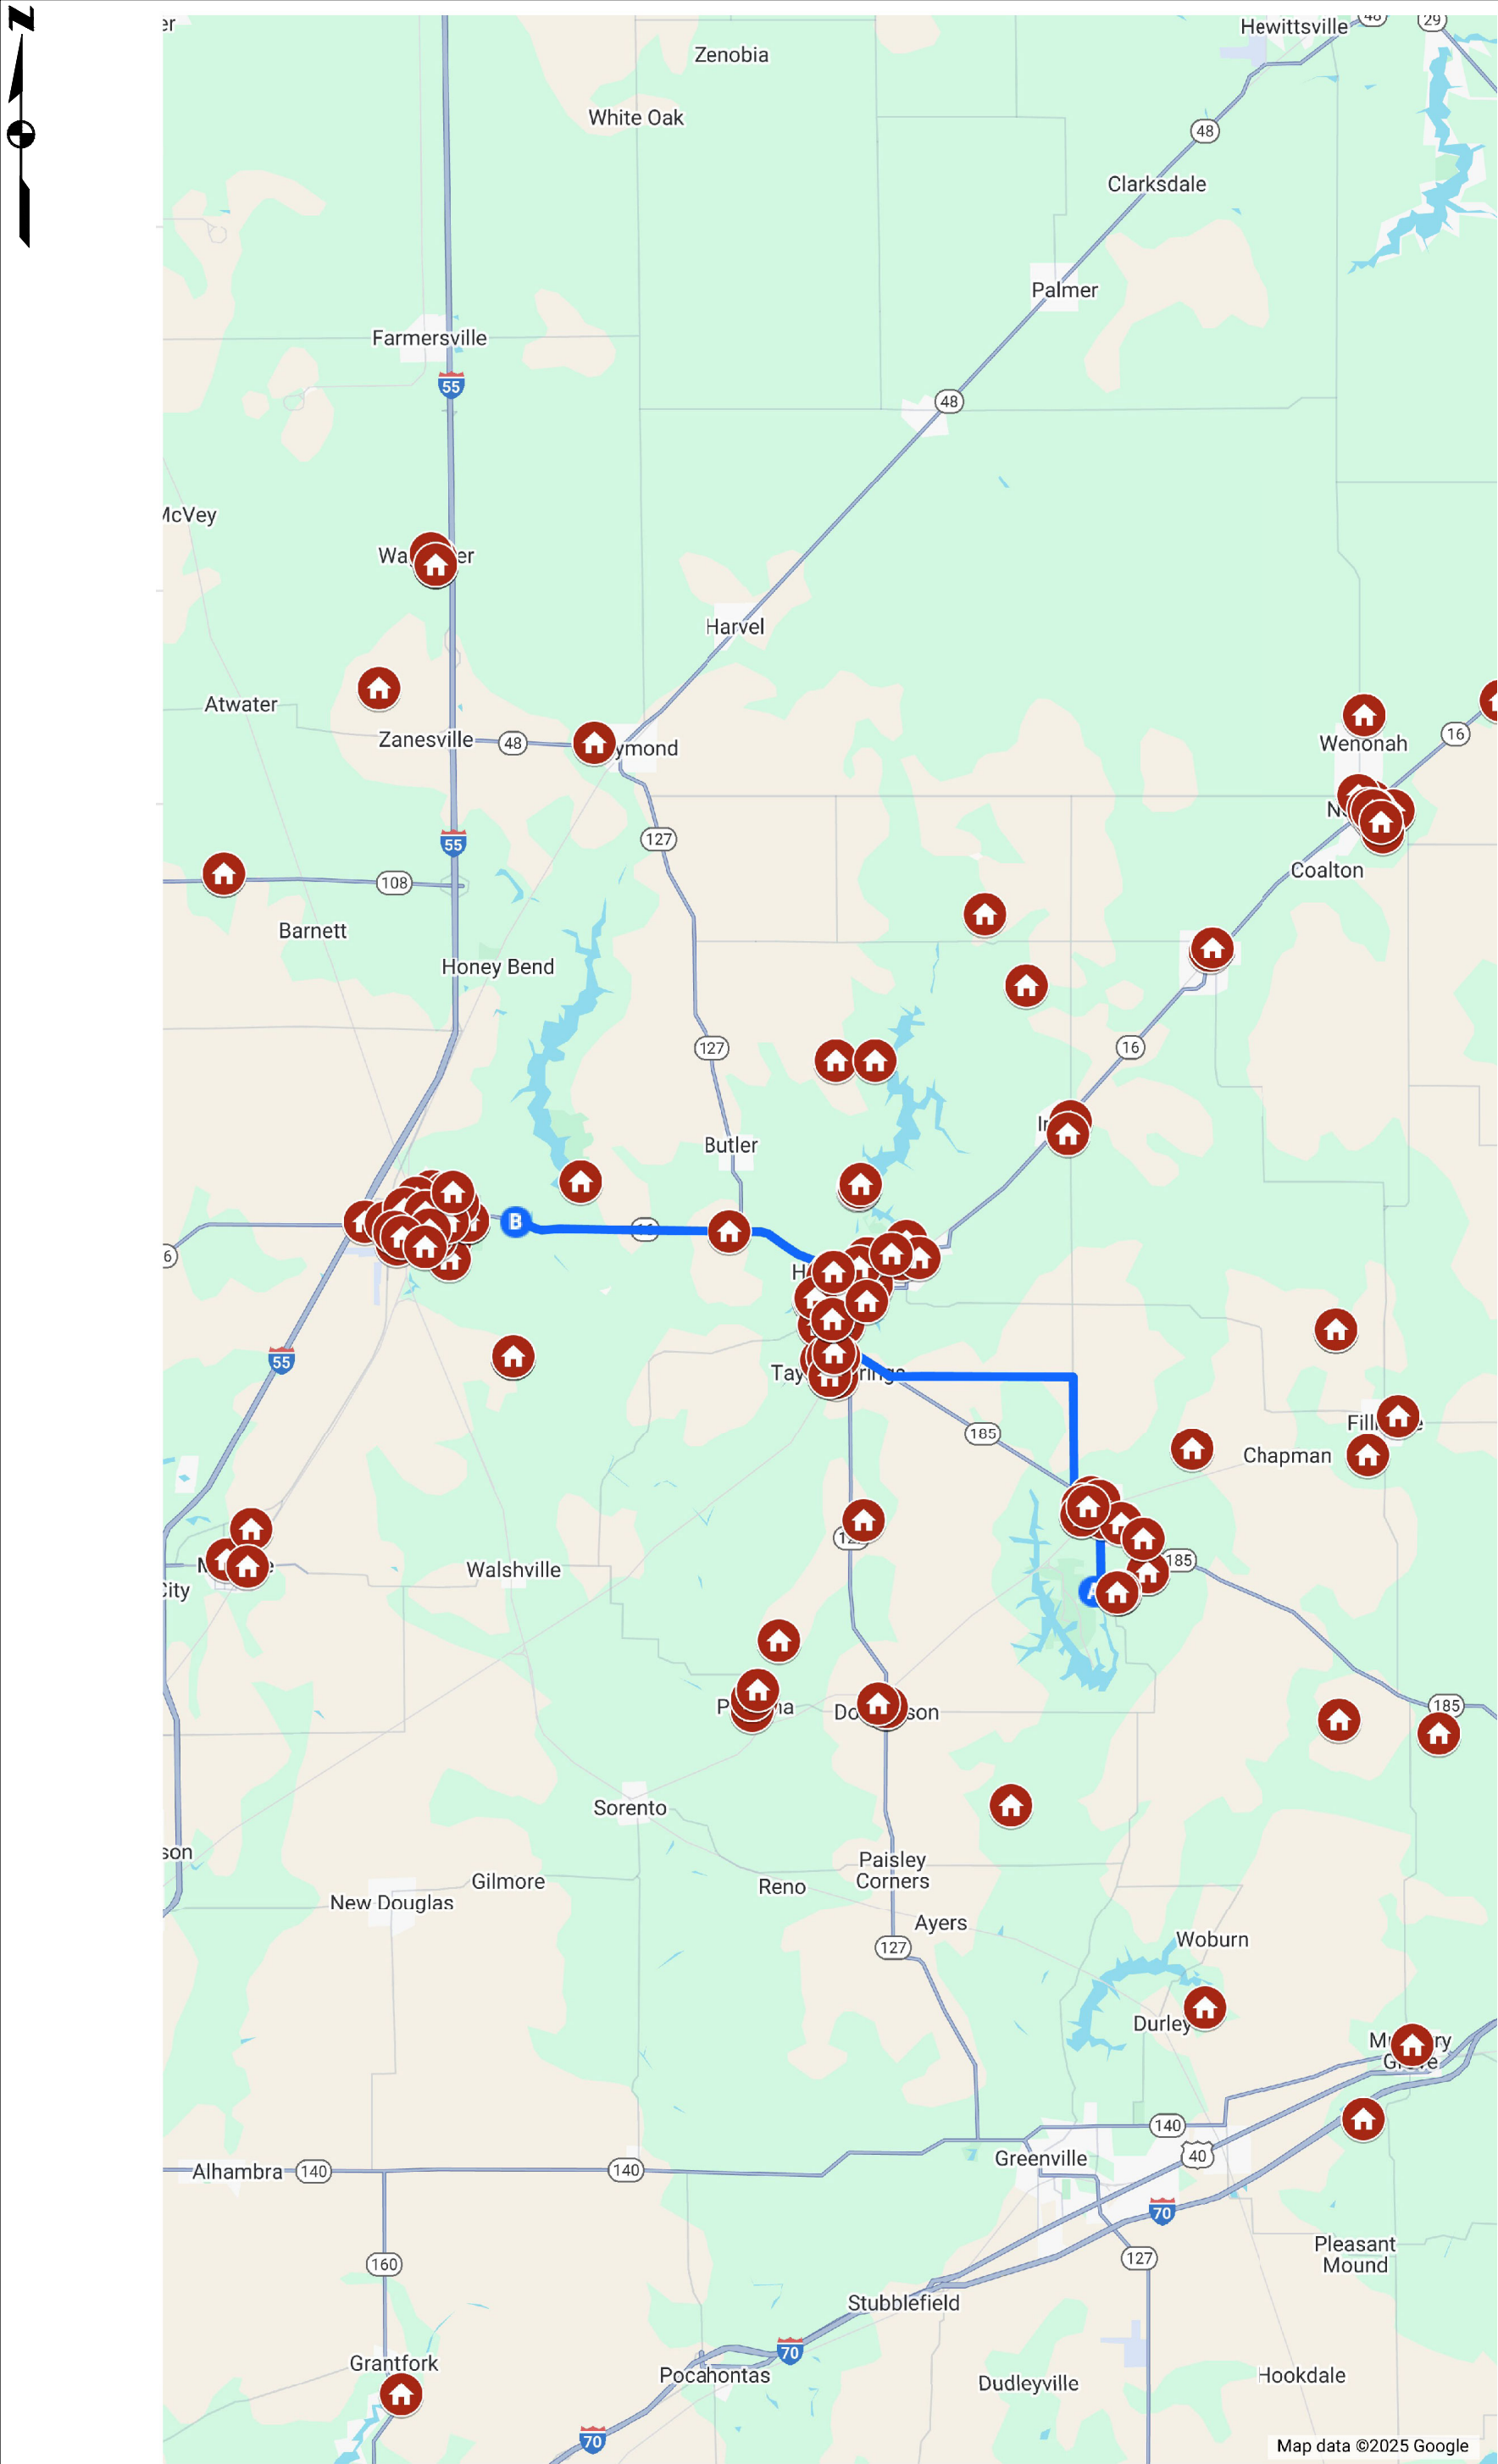

As can be seen from the attached letters, the local community continues to overwhelmingly support the CIP alternative over the CBR alternative.

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the impoundment closure plans for the Coffeen Power Plant because I would be adversely impacted by the alternative closure by removal method.

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Eugene Brominski

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

Sincerely,

Tammy Nelson

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Coffeen Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting a million cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and attains the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Mr. Jim Young

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the impoundment closure plans for the Coffeen Power Plant because I would be adversely impacted by the alternative closure by removal method.

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Coffeen Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting a million cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and attains the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

David Wilson

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

Sincerely,

John Jackson

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the impoundment closure plans for the Coffeen Power Plant because I would be adversely impacted by the alternative closure by removal method.

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Matthew Blankenship

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Coffeen Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting a million cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and attains the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Charles Engleman

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

Sincerely,

Alice Matthews

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

Sincerely,

Kerri Row

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the impoundment closure plans for the Coffeen Power Plant because I would be adversely impacted by the alternative closure by removal method.

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Beth Triplett

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Coffeen Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting a million cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and attains the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Brenda Goehlich

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Steve Snow

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Coffeen Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting a million cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and attains the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.

Please approve the Coffeen Power Plant's impoundment closure plan and reject calls to require closure by removal, which will drastically diminish the quality of life for residents and families.

Sincerely,

Mr. brandon squire Barnhill

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the impoundment closure plans for the Coffeen Power Plant because I would be adversely impacted by the alternative closure by removal method.

I cannot support any years-long proposal that would send thousands of truckloads over our local roads and highways, transporting a million cubic yards of coal ash to a commercial landfill.

There is a better way that does not involve the risks associated with hauling tens of thousands of truckloads of material through our communities.

The Coffeen Power Plant's closure plan is responsible. In addition to attaining all protection standards, the Coffeen Plant's proposed impoundment closure plan would allow the plant to consider deploying new utility-scale solar technology atop the reclaimed acres.

Illinois must prioritize the responsible retirement and reuse of power plant sites. Reusing the infrastructure and acres of these properties to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state.

Alternatively, the closure by removal method would severely diminish the quality of life for nearby residents along the proposed coal ash hauling routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Kay Jones

Subject line: Proposed Coffeen Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Coffeen Power Plant's plan to close the coal ash impoundments responsibly.

The risks and negative impact of hauling 1 million cubic yards of coal combustion residuals on local roads are significant. Every working day, there would be a stream of heavy-duty trucks hauling this material on our local county roads for years. This is simply unacceptable for our community.

Follow the rigorous standards and site-specific data to allow for the responsible retirement and redevelopment of the legacy plant site.

Reusing the infrastructure and acres of property that the Coffeen Power Plant owns to generate electricity and property tax revenue is environmentally responsible. It also avoids the complications and challenges of building this infrastructure elsewhere in the state. This work has already begun at the plant and more development is possible if a responsible impoundment closure plans are adopted.

The Coffeen Power Plant's impoundment closure plans are environmentally responsible and provides an opportunity for additional investment in our community.
