CCR Surface Impoundment Construction Permit Application Supplement

Illinois Power Resources Generating, LLC (IPRG) is hereby submitting a supplement to the closure construction permit application submitted on June 29, 2022. Enclosed is an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at IPRG's Edwards Power Plant which was included in the Final Closure Plan found in Appendix H of the application. The enclosed addendum provides updated information related to the CAA requirements to address the concerns of the local community. A similar addendum was submitted in July 2024.

Should you have any questions or comments regarding the above responses, please contact Rhys Fuller at rhys.fuller@vistracorp.com or (618) 975-1799.

Sincerely,

Phil Morris, P.E.
Sr. Director, Environmental

Closure Alternatives Analysis Addendum

**July 2025 Updated Information Regarding Concerns of Residents
Associated with the Closure Alternatives
[Illinois Administrative Code Section 845.710(b)(4)]**

This document presents an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at Illinois Power Resources Generating, LLC's (IPRG) Edwards Power Plant property in Peoria County, Illinois, which was submitted to the Illinois Environmental Protection Agency (IEPA) in July 2022 (Gradient, 2022). The CAA was prepared to meet the requirements of Section 845.710 of the Illinois Administrative Code (Title 35, Subtitle G, Chapter I, Subchapter j, Part 845; IEPA, 2021), which requires the development of a CAA prior to undertaking closure activities. The CAA evaluated two specific closure scenarios for the Ash Pond: Closure-in-Place (CIP) with consolidation and Closure-by-Removal with Off-Site coal combustion residual (CCR) Disposal (CBR-Offsite) using a wide range of criteria, including the efficiency, reliability, and ease of implementation of the closure scenario, and its potential positive and negative short- and long-term impacts on human health and the environment (Gradient, 2022; IEPA, 2021).

One specific requirement of Section 845.710 of the Illinois Administrative Code [845.710(b)(4)] relates to the ability of the closure scenario to address concerns raised by the local community:

The closure alternatives analysis must examine the following for each closure alternative...
[t]he degree to which the concerns of the residents living within communities where the CCR will be handled, transported and disposed of are addressed by the closure method (IEPA, 2021).

The CAA submitted in 2022 (Gradient, 2022) evaluated the closure alternatives with respect to this requirement and concluded that both closure scenarios addressed residents' concerns regarding impacts to groundwater and surface water quality. The CAA identified CIP as the most appropriate closure scenario for the Ash Pond based on all criteria that were evaluated consistent with the requirements of Section 845.710. A public meeting was held on May 25, 2022, during which the results of the CAA were discussed, and community questions were answered.

Since the initial submission of the CAA, IPRG has received hundreds of letters from residents, labor organizations, and town officials who live in communities near the Site and along adjacent transportation corridors. Through these letters, local community members have shown overwhelming support for the CIP alternative and raised concerns regarding the activities associated with the CBR-Offsite alternative. An addendum to the CAA conveying the local community's strong preference for the CIP alternative was submitted to the IEPA in 2024 (Gradient, 2024).

After the initial addendum was prepared, IPRG has continued to receive letters from residents who live in communities near the Site and along adjacent transportation corridors (Figure A.1). These letters (received since the submission of the 2024 addendum), which are attached at the end of this addendum, continue to voice support for the CIP alternative and raise concerns associated with the CBR-Offsite alternative.

Specifically, local residents are concerned about the "inherent hazards" (*e.g.*, increase in traffic, safety risk, noise and air pollution) associated with the CBR-Offsite scenario, which would involve removing and transporting millions of cubic yards of coal ash off-site over a period of 15 years. They state that they "cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill." On the other hand, they consider the CIP closure plan to be "environmentally responsible" and "better" than the CBR-Offsite alternative. They also point to the economic benefits of the CIP alternative which will involve "build[ing] a new utility-scale solar installation atop the reclaimed acres" that "will create good-paying jobs, increase property taxes, and generate new sources of energy" (*e.g.*, see letter from Mrs. Debra Eagan from Pekin, IL).

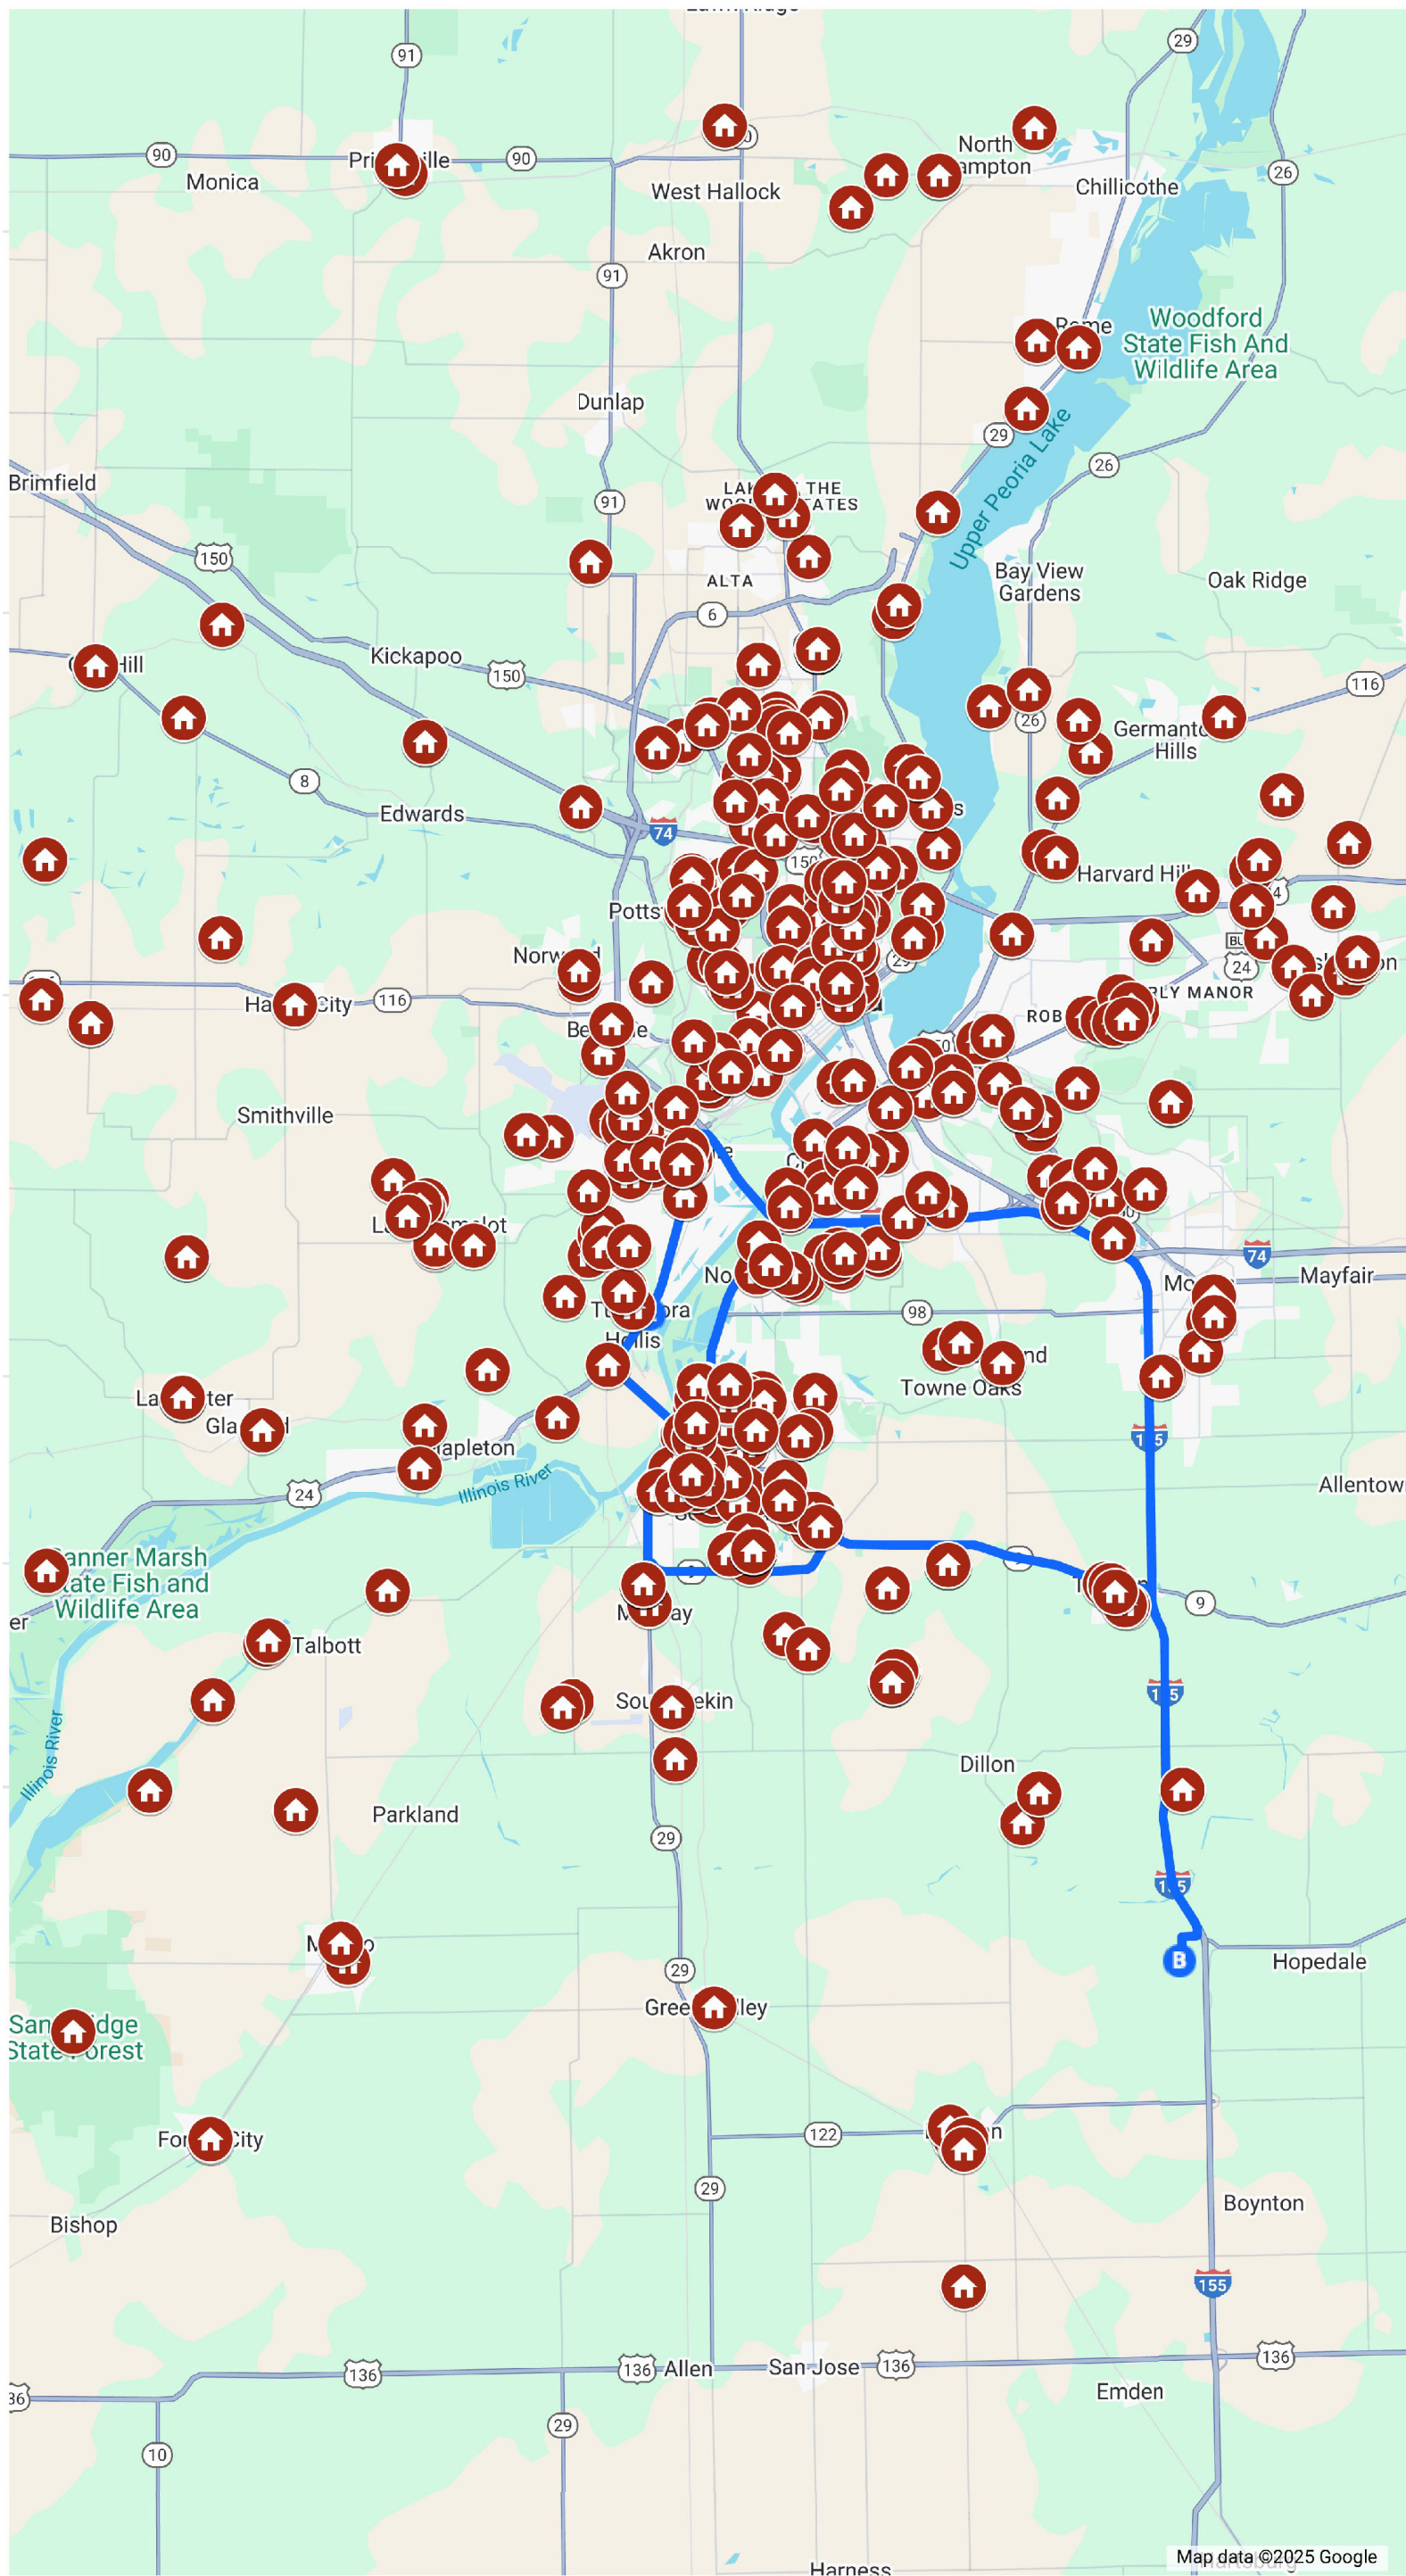

As can be seen from the attached letters, the local community continues to overwhelmingly support the CIP alternative over the CBR-Offsite alternative.

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Deb Scurry

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Debra Eagan

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Paul Cullen

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

James Mingus

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Mr. Jerry Wolland

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Gary Craig

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Rebecca Pritchard

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Glen Stallings

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Rick Norris

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. Shawn Gillham

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Michael O'Hara

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Jeffrey Hemp

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Linda L

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Jay Sauer

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Nicholas Maquet

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

avery johnson

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Ms. Janet Koch

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Andrea Hollins-jones

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Alisa Ann Robb

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Lee Ray

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Thomas Hobbs

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Thomas Singer

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

steve muller

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. Arthur Herm

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Jennifer Sewell

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Connie Hoffert

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Debra Jones

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

steve muller

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

steven bell

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Mr. Danny Randleman

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Brooke Lindeman

I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. Clifford Roach

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Mrs. Debbi Bitner

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Ms. Shirley Fowler
1130 East Euclid Avenue

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Michelle Hobbs

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities. But in all reality I don't want the plant to close. My electric bill has gone up by \$100 a month because they are shutting down the power plants when they don't have the infrastructure of solar and wind power up and running. Don't shut them down!

Sincerely,

Robert Calvin

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Jim Hayes

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Mr. John Abel

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Edwards Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Ms. Darla Schorr
228 Park Ridge Ln
Pekin, IL 61554-3975

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Edwards Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Edwards Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Edwards Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Linda Ricks

Subject line: Proposed Edwards Power Plant Impoundment Closure Public Comment

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Edwards Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Edwards Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,
