CCR Surface Impoundment Construction Permit Application Supplement

Kincaid Generation, LLC is hereby submitting a supplement to the closure construction permit application submitted on July 28, 2022. Enclosed is an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at the Kincaid Power Plant which was included in the Final Closure Plan found in Attachment G of the application. The enclosed addendum provides updated information related to the CAA requirements to address the concerns of the local community.

Should you have any questions or comments regarding the above responses, please contact Rhys Fuller at rhys.fuller@vistracorp.com or (618) 975-1799.

Sincerely,

A handwritten signature in blue ink, appearing to read "Phil Morris", is written over a light blue horizontal line.

Phil Morris, P.E.
Sr. Director, Environmental

Closure Alternatives Analysis Addendum

**Updated Information Regarding Concerns of Residents Associated
with the Closure Alternatives
[Illinois Administrative Code Section 845.710(b)(4)]**

This document presents an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at Kincaid Generation, LLC's Kincaid Power Plant property near the Village of Kincaid, Illinois, which was submitted to the Illinois Environmental Protection Agency (IEPA) in July 2022 (Gradient, 2022). The CAA was prepared to meet the requirements of Section 845.710 of the Illinois Administrative Code (Title 35, Subtitle G, Chapter I, Subchapter j, Part 845; IEPA, 2021), which requires the development of a CAA prior to undertaking closure activities. The CAA evaluated two specific closure scenarios for the Ash Pond: Closure-in-Place (CIP) with coal combustion residual (CCR) excavation and consolidation and Closure-by-Removal with Off-Site CCR Disposal (CBR-Offsite) using a wide range of criteria, including the efficiency, reliability, and ease of implementation of the closure scenario, and its potential positive and negative short- and long-term impacts on human health and the environment (Gradient, 2022; IEPA, 2021).

One specific requirement of Section 845.710 of the Illinois Administrative Code [845.710(b)(4)] relates to the ability of the closure scenario to address concerns raised by the local community:

The closure alternatives analysis must examine the following for each closure alternative...
[t]he degree to which the concerns of the residents living within communities where the CCR will be handled, transported and disposed of are addressed by the closure method (IEPA, 2021).

The CAA submitted in 2022 (Gradient, 2022) evaluated the closure alternatives with respect to this requirement and concluded that both closure scenarios addressed residents' concerns regarding impacts to groundwater and surface water quality. The CAA identified CIP as the most appropriate closure scenario for the Ash Pond based on all criteria that were evaluated consistent with the requirements of Section 845.710. A public meeting was held on June 15, 2022, during which the results of the CAA were discussed, and community questions were answered.

This addendum provides updated information related to the CAA requirement to address the concerns of the local community [845.710(b)(4)]. Since the initial submission of the CAA, Kincaid Generation has received hundreds of letters from residents who live in communities near the Site and along adjacent transportation corridors (Figure A.1), town officials, and labor organizations. The letters, which are attached at the end of this addendum, voice support for the CIP alternative and raise concerns associated with the CBR-Offsite alternative.

Specifically, local residents and town officials consider the CIP closure plan to be "environmentally responsible" and "better" than the CBR-Offsite alternative. Moreover, they support the move towards renewable energy generation associated with the proposed site re-development plan under the CIP alternative (a utility-scale solar facility that will be installed on the capped impoundment). The residents, town officials, and labor organizations are also excited by the economic benefits (*e.g.*, creation of additional jobs for local workers and the increase in property tax revenue) associated with the re-development plan under the CIP alternative.

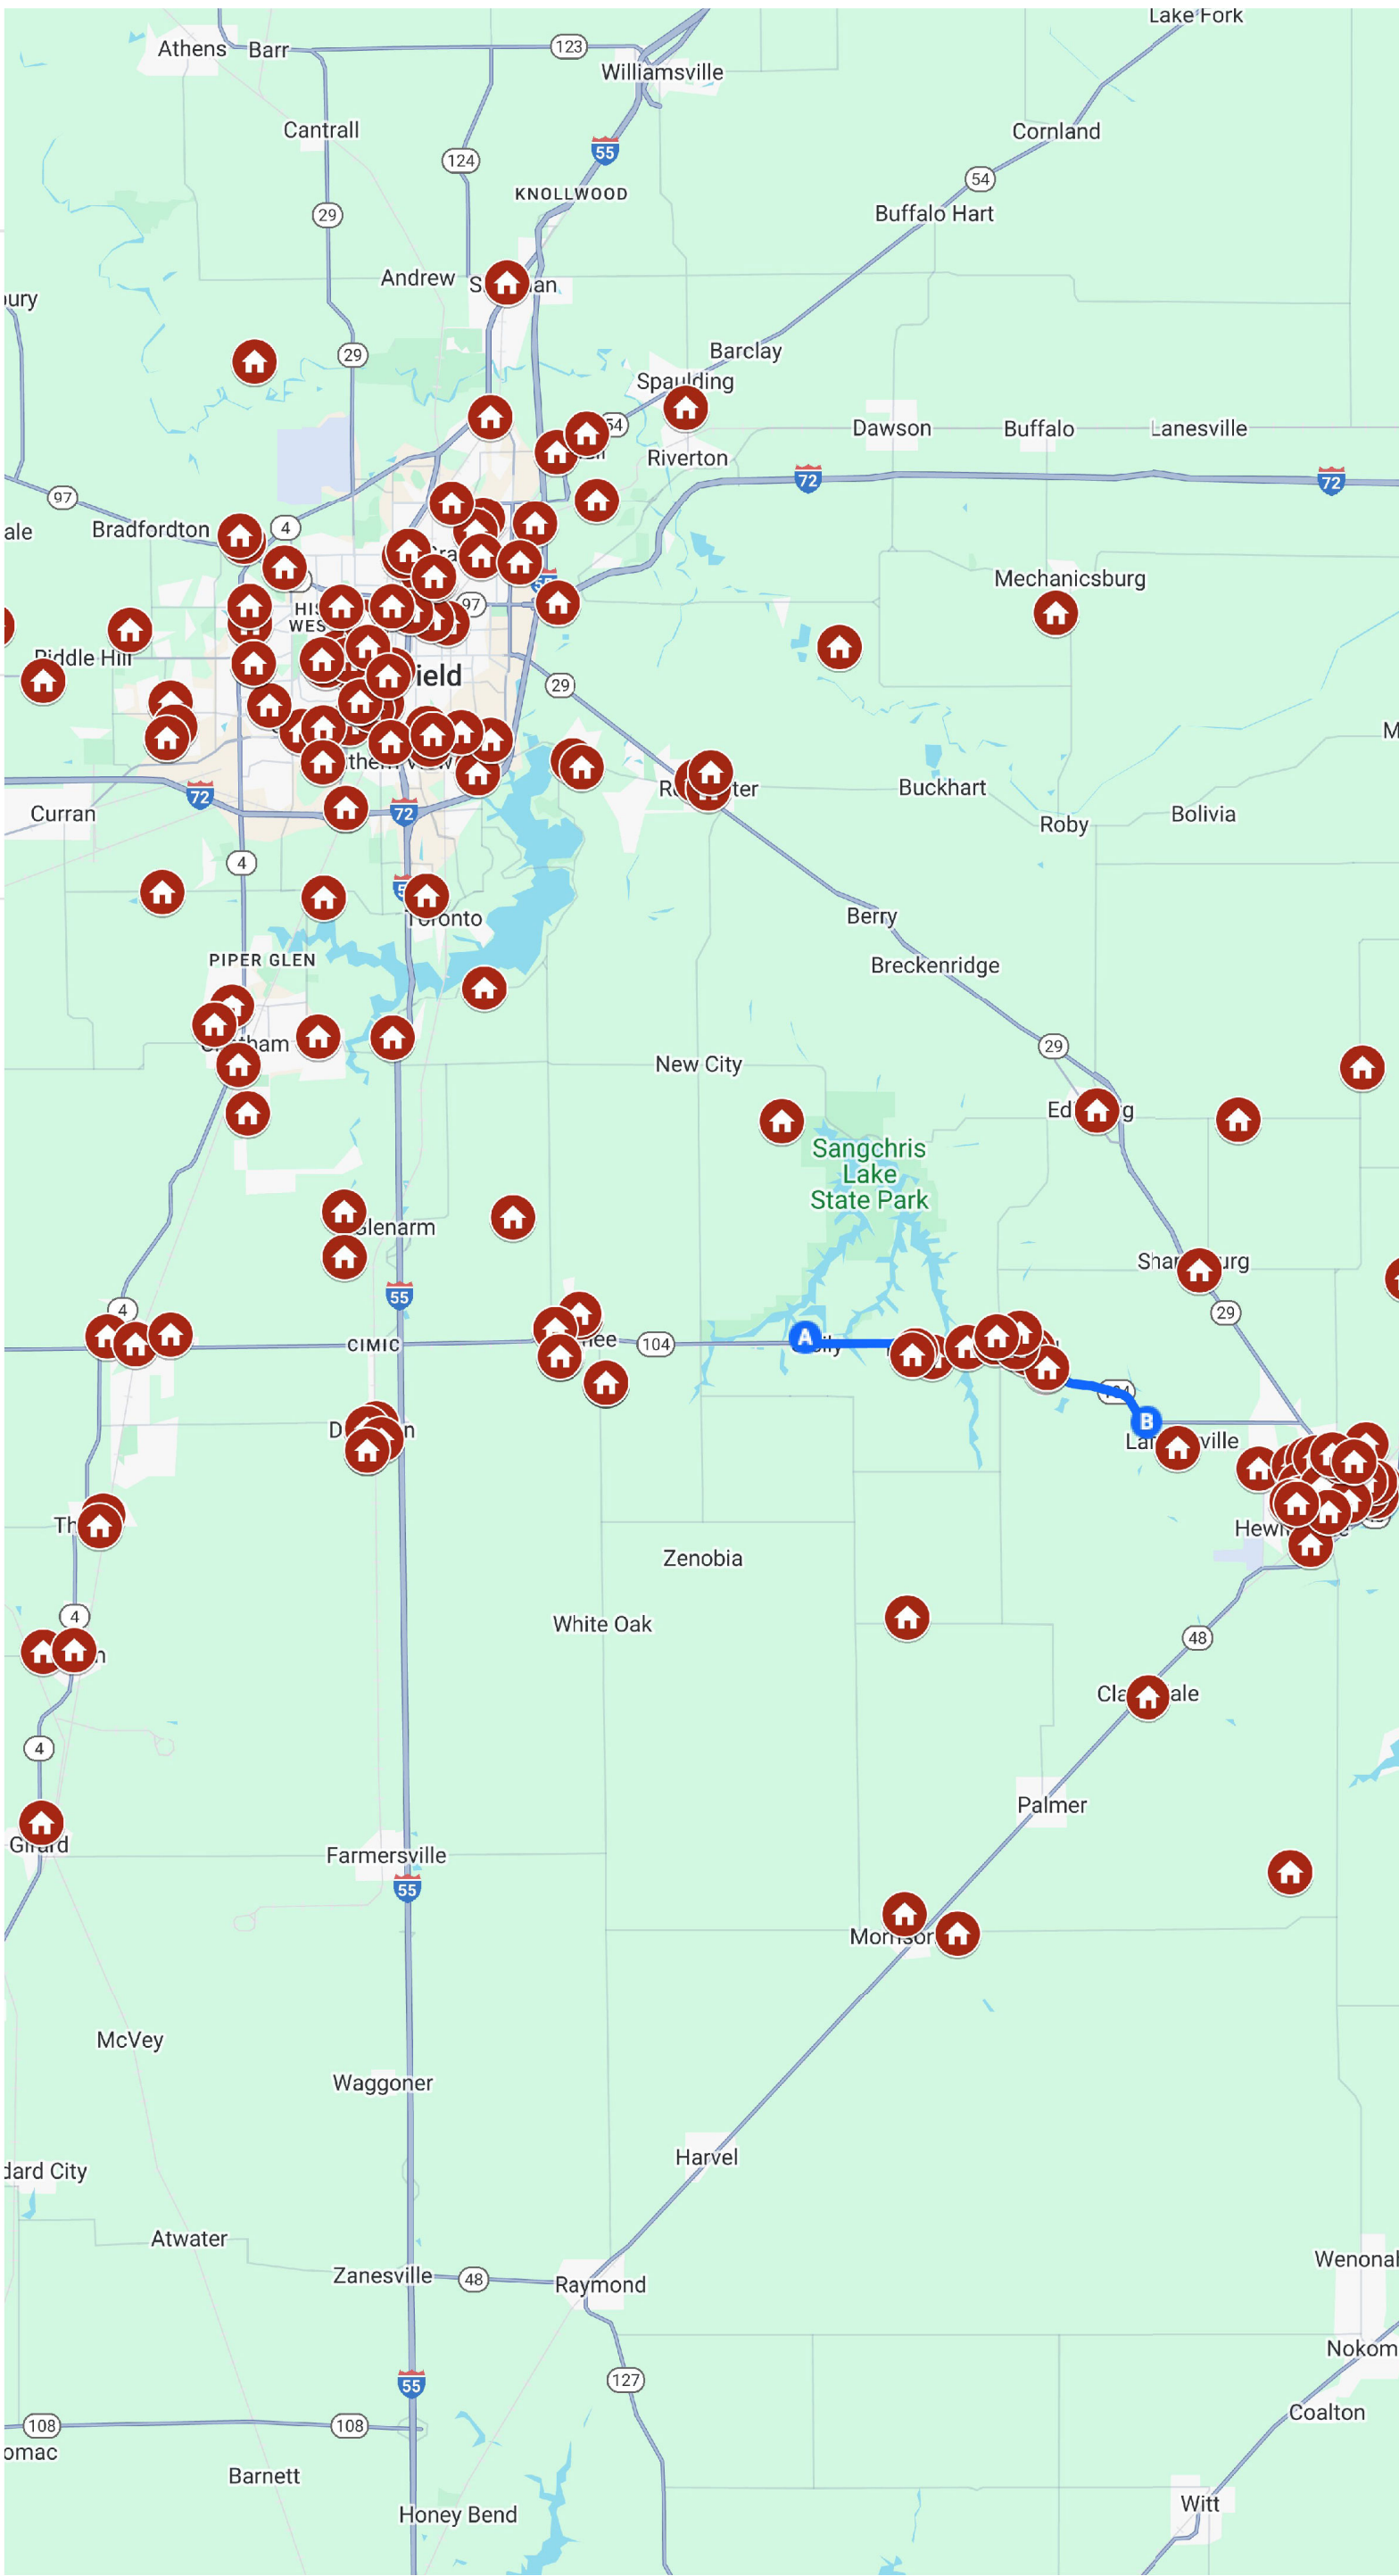

On the other hand, residents and town officials are concerned about the adverse effects associated with the CBR-Offsite scenario, which would involve removing and transporting millions of cubic yards of coal ash offsite over a period of 8.5 years. The concerns raised by residents and town officials include the increased traffic and safety risks, and noise and diesel pollution (from hauling coal ash on local roads and highways), which would "diminish the quality of life for residents who live near the plant or the coal ash transportation corridors" (*e.g.*, see letter from Bruce J. Barry, mayor of the City of Taylorville). In particular, many residents who live along the potential truck haul routes are concerned about these risks and have voiced their concerns (Figure A.1). Town officials are also worried about the increased wear and tear on local roads.

As can be seen from the attached letters, there is overwhelming support from the local community for the CIP alternative.

Letters From Government Officials

John J. Kim
Director, Illinois Environmental Protection Agency
1021 North Grand Ave. East
P.O. Box 19276
Springfield, IL 62794-9276

Re: Kincaid Power Plant Impoundment Closure Plan

Dear Director Kim:

In my capacity as the *State Representative of the 95th District in Illinois* and as a resident who would be greatly impacted by the transportation of coal ash in the region, I'm contacting you about the Agency's consideration of the impoundment closure plan submitted by the Kincaid Power Plant.

One of my concerns, is the impact the alternative closure by removal plan would impose on the region for the next two decades. Picking up and transporting the coal ash to another location presents its own unique risks and challenges. The intensity of removal operations under this alternative closure plan would broadly impact our region in ways that would quickly reduce the quality of life for residents that live near the plants or the coal ash transportation corridors.

Based on the volume of material needing to be transported offsite under closure by removal, approximately 377,000 truckloads would travel over 5 million miles on our local roads and highways to transport the coal ash to the offsite commercial landfill.

At any point along the coal ash transportation route, a truck involved in the removal operation would pass by every 1.75 to 2 minutes, 10 hours a day, for up to 8.5 years. I don't know how this is affordable by the State of Illinois and relying on taxpayers is not the answer.

The closure by removal plan creates burdens of increased traffic and safety risk, wear and tear on roads, noise, and diesel pollution in the region. There are multiple risks with the excavation and transportation of 2.95 million cubic yards of coal ash across public roads that are not present when the material is left and properly enclosed on site of the former coal plant.

I strongly oppose the alternative plan of closure by removal of the Kincaid Power Plant because of the negative impacts this method will have on our area communities. I encourage the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative proposal.

The Kincaid Power Plant's proposed impoundment closure plan attains all protection standards. Additionally, Vistra Corp.'s Illinois subsidiaries have proposed to build a new utility-scale solar installation atop the reclaimed acres at the impoundment. The renewable development will create good paying jobs during its construction and property taxes for the region once operational. Every brownfield acre reused at a coal plant site for renewables is an acre preserved for other important uses, such as agriculture or conservation.

I support the impoundment closure plan submitted by the Kincaid Power Plant and encourage its permitting by the Agency.

Sincerely,

Mike Coffey
State Representative

Re: Kincaid Power Plant Impoundment Closure Plan

Dear Director Kim:

In my capacity as the Superintendent of Edinburg Community Unit District #4 and as a resident who would be impacted by the transportation of coal ash in the region, I'm contacting you about the Agency's consideration of the impoundment closure plan submitted by the Kincaid Power Plant.

What concerns me is the impact the alternative closure by removal plan would impose on the region for the next two decades. Picking up and moving the coal ash to another location presents its own unique risks and challenges. The intensity of removal operations under this alternative closure plan would broadly impact our region in ways that would diminish the quality of life for residents that live near the plants or the coal ash transportation corridors.

Based on the volume of material needing to be transported offsite under closure by removal, approximately 377,000 truckloads would travel 5.4 million miles on our local roads and highways to transport the coal ash to the offsite commercial landfill.

At any point along the coal ash transportation route, a truck involved in the removal operation would pass by every 1.75 to 2 minutes, 10 hours a day, for up to 8.5 years.

The closure by removal plan imposes burdens of increased traffic and safety risk, wear and tear on roads, noise, and diesel pollution in the region. There are inherent risks with the excavation and transportation of 2.95 million cubic yards of coal ash across public roads that are not present when the material is left and properly enclosed on site of the former coal plant.

I oppose the alternative plan of closure by removal of the Kincaid Power Plant because of the negative impacts this method will have on our area communities. I encourage the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative proposal.

The Kincaid Power Plant's proposed impoundment closure plan attains all protection standards. Additionally, Vistra Corp.'s Illinois subsidiaries have proposed to build a new utility-scale solar installation atop the reclaimed acres at the impoundment. The renewable development will create good paying jobs during its construction and property taxes for the region once operational. Every brownfield acre reused at a coal plant site for renewables is an acre preserved for other uses, such as agriculture or conservation.

I support the impoundment closure plan submitted by the Kincaid Power Plant and encourage its permitting by the Agency.

Sincerely,

Ashley Francis

Re: Kincaid Power Plant Impoundment Closure Plan

Dear Director Kim:

In my capacity as the Senator for the 54th district, I'm contacting you about the Agency's consideration of the impoundment closure plan submitted by the Kincaid Power Plant.

What concerns me is the impact the alternative closure-by-removal plan would impose on the region for the next two decades. Picking up and moving the coal ash to another location presents its own unique risks and challenges. The intensity of removal operations under this alternative closure plan would broadly impact our region in ways that would diminish the quality of life for residents who live near the plants or the coal ash transportation corridors.

Based on the volume of material needing to be transported offsite under closure-by-removal, approximately 377,000 truckloads would travel 5.4 million miles on our local roads and highways to transport the coal ash to the offsite commercial landfill.

At any point along the coal ash transportation route, a truck involved in the removal operation would pass by every 1.75 to 2 minutes, 10 hours a day, for up to 8.5 years.

The closure-by-removal plan imposes burdens of increased traffic and safety risks, wear and tear on roads, noise, and diesel pollution in the region. There are inherent risks with the excavation and transportation of 2.95 million cubic yards of coal ash across public roads that are not present when the material is left and properly enclosed on the site of the former coal plant.

I oppose the alternative plan of closure-by-removal of the Kincaid Power Plant because of the negative impacts this method will have on our area communities. I encourage the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative proposal.

The Kincaid Power Plant's proposed impoundment closure plan attains all protection standards. Additionally, Vistra Corp.'s Illinois subsidiaries have proposed to build a new utility-scale solar installation atop the reclaimed acres at the impoundment. The renewable development will create good-paying jobs during its construction and property taxes for the region once operational. Every brownfield acre reused at a coal plant site for renewables is an acre preserved for other uses, such as agriculture or conservation.

I support the impoundment closure plan submitted by the Kincaid Power Plant as long as safety measures are in place to ensure that there are no negative effects on the water supply or the environment and encourage its permitting by the Agency.

Sincerely,

P.O. Box 19276
Springfield, IL 62794-9276

Dear Director Kim:

In my capacity as the state senator and potentially someone who may be impacted by the transportation of coal ash in the region, I am contacting you regarding the impoundment closure plan submitted by the Kincaid Power Plant.

I oppose the alternative plan of closure by removal of the Kincaid Power Plant because of the negative impact this method will have on our region and communities. Picking up and moving the coal ash to another location presents its own unique challenges.

Among my several concerns are the multiple impacts the alternative closure by removal plan would impose on the region for the next two decades. The intensity of removal operations under this alternative closure plan would broadly impact our region in ways that would diminish the quality of life for residents that live near the plants, the coal ash transportation corridors or use our regional highway system daily.

Based on the volume of material needing to be transported offsite under closure by removal, approximately 377,000 truckloads would travel 5.4 million miles on our local roads and highways to transport the coal ash to the offsite commercial landfill. At any point along the coal ash transportation route, a truck involved in the removal operation would pass by every 1.75 to 2 minutes, 10 hours a day, for up to 8.5 years.

The closure by removal plan imposes unnecessary and additional burdens of traffic and safety risks, wear and tear on roads, noise, and diesel pollution in the region. There are inherent hazards with the excavation and transportation of 2.95 million cubic yards of coal ash across public roads that are not present when the material is left on site of the former coal plant.

I encourage the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative proposal.

Sincerely,

A handwritten signature in cursive script that reads "Doris Turner".

Letters From Labor Organizations

May 18th, 2023

John J. Kim
Director, Illinois Environmental Protection Agency
1021 North Grand Ave. East
P.O. Box 19276
Springfield, IL 62794-9276

Dear Director Kim:

On behalf of the hardworking men and women of IBEW Local 15, I wish to express my support for the coal ash surface impoundment closure plans submitted by Vistra Corp.'s Illinois subsidiaries. IBEW Local 15 represents the workforce at Kincaid Generating Station located in Kincaid, Illinois.

As you know, Vistra Corp. has embraced Illinois' energy transition and is moving forward with significant reinvestment in renewable energy technologies at retired or soon to-be-retired coal plant sites.

There is more opportunity to develop renewable energy at these plant sites, which have long been reserved and zoned for the industrial use of producing electricity. Our hope is that those jobs remain within the International Brotherhood of Electrical Workers Union.

We support Vistra Corp.'s Illinois subsidiaries' efforts to responsibly close their coal ash surface impoundments, creating opportunities to turn these acres into utility-scale solar energy facilities. As Illinois moves towards a cleaner future within the generation industry, IBEW Local 15 is always looking for transition employment opportunities for our members that currently work at retiring fossil stations.

If the plants' hybrid method of impoundment closures is approved, the sites are projected to attain necessary groundwater protection standards and there will be opportunity for IBEW members to construct utility-scale solar on hundreds of acres of to-be-closed coal ash impoundments.

If the alternative method of closure-by-removal were required, IBEW members would no longer have the opportunity to work at these sites constructing solar energy facilities because Vistra Corp. will not place additional solar on these retired fossil plant sites following the required ash-removal.

Closure-by-removal requires many trucks, driving tons of coal ash through communities. I ask the Agency to weigh all factors against the ability to attain groundwater protection standards, while creating opportunities for work transforming legacy coal plant sites into renewable energy centers.

IBEW Local 15 supports the impoundment closure plans submitted by the Illinois subsidiaries of Vistra Corp. for their plant sites.

Sincerely,

Chris Riser
President / Business Manager / Financial Secretary
IBEW Local 15

May 23, 2023

John J. Kim
Director, Illinois Environmental Protection Agency
1021 North Grand Ave. East
P.O. Box 19276
Springfield, IL 62794-9276

Dear Director Kim:

On behalf of the hardworking men and women of IBEW Local 51, I write in my position as Business Manager to express my support for the coal ash surface impoundment closure plans submitted by Vistra Corp.'s Illinois subsidiaries.

As you know, our members are on the frontlines constructing new utility-scale, zero-carbon renewable energy centers across the state to help realize Illinois' goal of 100% carbon-free power by 2045. Vistra Corp. has embraced Illinois' energy transition and is moving forward with significant reinvestment in renewable energy technologies at retired or to-be-retired coal plant sites. I would be remiss if I did not touch on the fact that since the summer of 2016, we have lost approximately 325 members at six (6) of these affected sites. The loss of these community leading jobs and tax revenues have had a noticeable impact on these areas, and I believe any opportunity for new development would be met with great optimism.

Our members are excited at the opportunity to earn living wages transforming these sites from carbon-intense to carbon-free energy centers in the months and years ahead. There is more opportunity to develop renewable energy at these plant sites, which have long been reserved and zoned for the industrial use of producing electricity.

We support Vistra Corp.'s Illinois subsidiaries' efforts to responsibly close their coal ash surface impoundments, creating opportunities to turn these acres into utility-scale solar energy facilities. The Climate & Equitable Jobs Act made clear we don't have to choose between a cleaner energy future and jobs, we can accomplish both through responsible policies.

The impoundment closure plans are good for the environment and good for the economy. If the plants' hybrid method of impoundment closures is approved the sites are projected to attain necessary groundwater protection standards and there will be opportunity for our members to construct utility-scale solar on hundreds of acres of to-be-closed coal ash impoundments.

If the alternative method of closure-by-removal were required, our members would lose the opportunity for additional work at these sites, and the intensity of removal operations would diminish the quality of life for my members that live near the plants or the coal ash transportation corridors.

Closure-by-removal requires hundreds of thousands of trucks, driving tens of millions of miles carrying tons of coal ash through communities. The traffic, wear and tear on roads, noise and diesel pollution associated with this closure method are burdens. I ask the Agency to weigh these factors against the ability to attain groundwater protection standards, while creating opportunities for work transforming legacy coal plant sites into renewable energy centers.

IBEW Local 51 supports the impoundment closure plans submitted by the Illinois subsidiaries of Vistra Corp. for their plant sites.

I greatly appreciate your time and consideration of this matter.

Sincerely,

Robert S. Wedell
Business Manager
IBEW Local 51

May 19, 2023

John J. Kim
Director, Illinois Environmental Protection Agency
1021 North Grand Ave. East
P.O. Box 19276
Springfield, IL 62794-9276

Director Kim:

I am writing to you in support of Vistra Corp. and its subsidiaries' application for the coal ash surface impoundment closure plans it submitted to the Illinois Environmental Protection Agency ("IEPA"). The members of the International Union of Operating Engineers (IUOE) Local 150 have worked and continue working on the frontlines of new utility-scale renewable energy projects throughout the State including solar, coal-to-solar, and wind energy every day.

Across the U.S., discussions about coal plant closures and coal ash pond remediation often come with controversy. Opponents are quick to mention potential damage to the environment and public health, while supporters point to thousands of jobs being created across the nation, strengthening local economies and helping to meet ever-increasing demands for energy. Our members are enthusiastic at the opportunity to earn living wages by working on these green projects to assist in the State's transition to carbon-free power.

IUOE Local 150 supports Vistra Corp.'s Illinois subsidiaries' efforts to responsibly close the coal ash surface impoundments at the Kincaid, Newton, Edwards and Joppa facilities and transform them into utility-scale solar energy facilities. The impoundment closure plans are good for the environment, community, and the economy. If the plants' hybrid method of impoundment closures is approved, the sites are projected to attain necessary groundwater protection standards while providing opportunity for our current and future members to construct utility-scale solar on hundreds of acres of to-be-closed coal ash impoundments. Moreover, IUOE Local 150 and Vistra are collectively committed to helping those who are disproportionately impacted by coal plant closures to help attain safe jobs in their respective communities through the diversity, equity, and inclusion requirements under CEJA. Vistra's commitment to this value aligns with IUOE Local 150's—to create safe and strong construction jobs at a living wage and create opportunities for apprentices in the trades and journeyworkers alike.

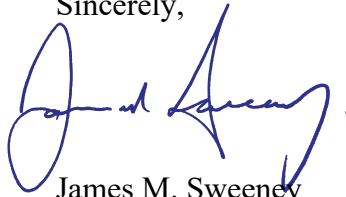

If the alternative method of closure-by-removal were required, IUOE Local 150's members would lose the opportunity for work at these sites, and the intensity of removal operations would diminish

the quality of life for my members that live near the plants or along the coal ash transportation route.

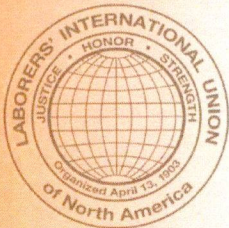

Closure-by-removal requires hundreds of thousands of trucks, driving tens of millions of miles carrying tons upon tons of coal ash through several communities. The traffic, wear and tear on roads, noise and diesel pollution associated with this closure method are not only burdens but risks to public safety. Particularly, years of hundreds of thousands of trucks containing contaminated ash will pose a high risk of accidents to other drivers on the roads and create the potential for loose ash to result in airborne contaminants in the surrounding communities. We ask the Agency to weigh these factors against the ability to attain groundwater protection standards, while creating opportunities for work transforming legacy coal plant sites into renewable energy centers.

IUOE Local 150 supports the impoundment closure plans submitted by Vistra Corp.'s Illinois subsidiaries for their plant sites. We believe that they are a highly respected and quality energy company with exemplary safety, health, and environmental teams to get the job done the right way for everyone involved.

Sincerely,

A handwritten signature in blue ink, appearing to read "James M. Sweeney", with a stylized flourish at the end.

John J. Kim

Director, Illinois Environmental Protection Agency

1021 North Grand Ave. East

P.O. Box 19276

Springfield, IL 62794-9276

Director Kim:

We are writing to you in our capacity as Vice Presidents and Managers of our respective regions of the Laborers' International Union of North America ("LIUNA") in support of Vistra Corp. and its subsidiaries' application for the coal ash surface impoundment closure plans it submitted to the Illinois Environmental Protection Agency ("IEPA"). LIUNA's members have worked and continue working on the frontlines of new utility-scale renewable energy projects throughout the State including solar, coal-to-solar, and wind energy every day.

Across the U.S., discussions about coal plant closures and coal ash pond remediation often come with controversy. Opponents are quick to mention potential damage to the environment and public health, while supporters point to thousands of jobs being created across the nation, strengthening local economies and helping to meet ever-increasing demands for energy. The IEPA's strong regulations and application approval process in conjunction with the State's Climate and Equitable Jobs Act ("CEJA") creates a unique opportunity for the responsible closure of coal plants and coal ash pond remediation to be completed in such a way that assures the safety of our members and their families' communities for generations to come while reducing Illinois's carbon footprint. Our membership and LIUNA are enthusiastic at the opportunity to earn living wages by working on these green projects to assist in the State's transition to carbon-free power.

LIUNA supports Vistra Corp.'s Illinois subsidiaries' efforts to responsibly close the coal ash surface impoundments at the Kincaid, Newton, Edwards and Joppa facilities and transform them into utility-scale solar energy facilities. The impoundment closure plans are good for the environment, community, and the economy. If the plants' hybrid method of impoundment closures is approved, the sites are projected to attain necessary groundwater protection standards while providing opportunity for our current and future members to construct utility-scale solar on hundreds of acres of to-be-closed coal ash impoundments. Moreover, LIUNA and Vistra are collectively committed to helping those who

Feel the Power

Mr. John J. Kim
May 19, 2023
Page Two

are disproportionately impacted by coal plant closures to help attain safe jobs in their respective communities through the diversity, equity, and inclusion requirements under CEJA. Vistra's commitment to this value aligns with LIUNA's—to create safe and strong construction jobs at a living wage and create opportunities for apprentices in the trades and journeyworkers alike.

If the alternative method of closure-by-removal were required, LIUNA's members would lose the opportunity for work at these sites, and the intensity of removal operations would diminish the quality of life for my members that live near the plants or along the coal ash transportation route.

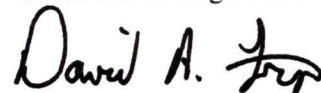

Closure-by-removal requires hundreds of thousands of trucks, driving tens of millions of miles carrying tons upon tons of coal ash through several communities. The traffic, wear and tear on roads, noise and diesel pollution associated with this closure method are not only burdens but risks to public safety. Particularly, years of hundreds of thousands of trucks containing contaminated ash will pose a high risk of accidents to other drivers on the roads and create the potential for loose ash to result in airborne contaminants in the surrounding communities. We ask the Agency to weigh these factors against the ability to attain groundwater protection standards, while creating opportunities for work transforming legacy coal plant sites into renewable energy centers.

LIUNA supports the impoundment closure plans submitted by Vistra Corp.'s Illinois subsidiaries for their plant sites. We believe that they are a highly respected and quality energy company with exemplary safety, health, and environmental teams to get the job done the right way for everyone involved.

Sincerely,

TERRENCE M. HEALY
Vice President and LiUNA
Great Lakes Regional Manager

DAVID A. FRYE
Vice President and LiUNA
Midwest Regional Manager

Cc: Patrick Peyton, Vistra Corp.

Letters From Local Residents

7/15/2024 13:50

Barb Lieberoff
Community Relations Ofc.
Illinois Environmental Protection Agency
1021 North Grand Avenue East PO Box 19276
Springfield, IL 62794

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Barb Lieberoff,

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Rebekah Bowman
Po Box 109
Divernon, IL 62530

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Barb Lieberoff,

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Wendell Webb

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Barb Lieberoff,

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

David Lowery

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Trisha Snow

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Barb Lieberoff,

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Patricia Haynes

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Robert Smith

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Barb Lieberoff,

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Mary Shoopman

Dear Community Relations Ofc. Barb Lieberoff,

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Bill Davis

Dear Community Relations Ofc. Barb Lieberoff,

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Marquita Church
3219 E. Division

Dear Community Relations Ofc. Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Bill Brackett

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Michael Tamborski

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Kelly Noonan

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Vickie Dixon

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

William Gamble

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I strongly urge the Illinois EPA to oppose the Kincaid Power Plant's proposed impoundment closure plan.

As a resident who would be adversely impacted by the construction of solar farms, I would rather keep our clean coal power plants in production more reliably generating power for our communities continuously and uninterrupted as opposition the reliance of sunlight. Our seasons, day length as well as cloudy days dramatically cut the ability to generate power for our homes.

The local community doesn't want to have thousands of our most productive soils that are our country's safest and most reliable food production acres taken out of raising crops forever.

I urge you to oppose the plant's proposed impoundment plan as it is not a good trade for solar.

Sincerely,

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Cornelius Jones

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Bridget Mahoney DePriest

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Brad Spent

I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Jerry Kohl

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Kevin Johnson
122 Edison St

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Timmy Brown

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Subject: Proposed Kincaid Power Plant Impoundment Closure Public Comment

Dear Community Relations Ofc. Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident of the state of Illinois and I am very concerned with the plans of the EPA closing all the coal fired powerhouses here in Illinois. As soon as these closures happen we will be in a severe shortage of base load power. Maybe instead of throwing all my tax money at green energy that we all know can't keep up with the future demands of the grid, we could give some of it to the coal industry to keep more jobs here and base load capacity up

Sincerely,
