CCR Surface Impoundment Construction Permit Application Supplement

Kincaid Generation, LLC is hereby submitting a supplement to the closure construction permit application submitted on July 28, 2022. Enclosed is an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at the Kincaid Power Plant which was included in the Final Closure Plan found in Attachment G of the application. The enclosed addendum provides updated information related to the CAA requirements to address the concerns of the local community. A similar addendum was submitted in July 2024.

Should you have any questions or comments regarding the above responses, please contact Rhys Fuller at [rhys.fuller@vistracorp.com](mailto:rhys.fuller@vistracorp.com) or (618) 975-1799.

Sincerely,

A handwritten signature in blue ink, appearing to read "Phil Morris".

Phil Morris, P.E.  
Sr. Director, Environmental

# **Closure Alternatives Analysis Addendum**

---

**July 2025 Updated Information Regarding Concerns of Residents  
Associated with the Closure Alternatives  
[Illinois Administrative Code Section 845.710(b)(4)]**

This document presents an addendum to the Closure Alternatives Assessment (CAA) for the Ash Pond at Kincaid Generation, LLC's Kincaid Power Plant property near the Village of Kincaid, Illinois, which was submitted to the Illinois Environmental Protection Agency (IEPA) in July 2022 (Gradient, 2022). The CAA was prepared to meet the requirements of Section 845.710 of the Illinois Administrative Code (Title 35, Subtitle G, Chapter I, Subchapter j, Part 845; IEPA, 2021), which requires the development of a CAA prior to undertaking closure activities. The CAA evaluated two specific closure scenarios for the Ash Pond: Closure-in-Place (CIP) with coal combustion residual (CCR) excavation and consolidation and Closure-by-Removal with Off-Site CCR Disposal (CBR-Offsite) using a wide range of criteria, including the efficiency, reliability, and ease of implementation of the closure scenario, and its potential positive and negative short- and long-term impacts on human health and the environment (Gradient, 2022; IEPA, 2021).

One specific requirement of Section 845.710 of the Illinois Administrative Code [845.710(b)(4)] relates to the ability of the closure scenario to address concerns raised by the local community:

The closure alternatives analysis must examine the following for each closure alternative...  
[t]he degree to which the concerns of the residents living within communities where the CCR will be handled, transported and disposed of are addressed by the closure method (IEPA, 2021).

The CAA submitted in 2022 (Gradient, 2022) evaluated the closure alternatives with respect to this requirement and concluded that both closure scenarios addressed residents' concerns regarding impacts to groundwater and surface water quality. The CAA identified CIP as the most appropriate closure scenario for the Ash Pond based on all criteria that were evaluated consistent with the requirements of Section 845.710. A public meeting was held on June 15, 2022, during which the results of the CAA were discussed, and community questions were answered.

Since the initial submission of the CAA, Kincaid Generation has received hundreds of letters from residents, labor organizations, and town officials who live in communities near the Site and along adjacent transportation corridors. Through these letters, local community members have shown overwhelming support for the CIP alternative and raised concerns regarding the activities associated with the CBR-Offsite alternative. An addendum to the CAA conveying the local community's strong preference for the CIP alternative was submitted to the IEPA in 2024 (Gradient, 2024).

After the initial addendum was prepared, Kincaid Generation has continued to receive letters from residents who live in communities near the Site and along adjacent transportation corridors (Figure A.1). These letters (received since the submission of the 2024 addendum), which are attached at the end of this addendum, continue to voice support for the CIP alternative and raise concerns associated with the CBR-Offsite alternative.

Specifically, local residents have expressed concerns about the "inherent hazards," (such as an increase in traffic, safety risks, noise and air pollution) associated with the CBR-Offsite scenario, which would involve removing and transporting millions of cubic yards of coal ash off-site over a period of 8.5 years. They note that the CBR-Offsite alternative would involve "hauling hundreds of thousands of truckloads of material through our communities" and "would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes" (e.g., see letter by Bill Gunn from Springfield, IL). On the other hand, they consider the CIP closure plan to be an "environmentally responsible" plan that "compl[ies] with all protection standards" (e.g., see letter by Ms. Kim Pate from Sherman, IL).

As can be seen from the attached letters, the local community continues to overwhelmingly support the CIP alternative over the CBR-Offsite alternative.

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Ms. Kim Pate  
141 Stardust Drive  
Sherman, IL 62684-9718

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Bill Gunn  
3504 Deer Run Dr Dr3  
Springfield, IL 62711-6703

Springfield, IL 62794-9276

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

William Torricelli

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. David Lowery  
966 N Grove st.  
Virden, IL 62690-1010

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Lynn Rathgeber

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mrs. Cindy Keating  
16 Amos Valley Drive  
Springfield, IL 62702

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Dr. Mark Sturdy

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Mr. Michael Angelico

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Terry Standish  
1330 East Stanford Avenue  
Springfield, IL 62703

PO Box 19276  
Springfield, IL 62794-9276

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Peggy Branham

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Chay Anthony

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Chad Stickler

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Sue Ade

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Shad Little

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

William Willhoit

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Ray Ellis

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Lacey Swinburne

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Antony Stevens

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. David Ferrill

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Ryan Daugherty

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Glenn Vincent

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Terrence Mohr

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Sue Hogge

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Mr. Constance Slightom

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Randy Radford

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Carey Powell

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Angela Kirkendoll

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Gail Parsons

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Nancy McCann-Stone

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Mr. Gary Herr

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Richard Breckenridge

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Terence Painter Sr.

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Juliann Hughes

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I strongly urge the Illinois EPA to support the Kincaid Power Plant's proposed impoundment closure plan and proposal to reinvest in the site to build a new utility-scale solar installation atop the reclaimed acres.

Not only does this plan comply with all protection standards, but it will create good-paying jobs, increase property taxes, and generate new sources of electricity. It is a win-win for our community.

As a resident who would be adversely impacted by the alternative closure by removal method, I cannot support any proposal that would send hundreds of thousands of truckloads over our local roads and highways to an offsite landfill. I urge the Agency to weigh the negative impacts of closure by removal and the local opposition to this alternative closure method.

The local community does not want the inherent hazards associated with excavating and transporting millions of cubic yards of coal ash across public roads. I encourage the agency to weigh the negative impacts of closure by removal, especially when there is a viable and responsible plan that leaves the material on site of the former coal plant and achieves the same result.

I urge you to support the plant's proposed impoundment plan.

Sincerely,

Miss Angela Miller

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

I am contacting you about the Illinois EPA's consideration of the closure plan for the Kincaid Power Plant.

I'm a resident who would be adversely impacted by the alternative closure by removal method. I cannot support any years-long proposal that would send hundreds of thousands of truckloads over our local roads and highways, transporting millions of cubic yards of coal ash to a landfill.

There is a better way that does not involve the risks associated with hauling hundreds of thousands of truckloads of material through our communities.

The Kincaid Power Plant's closure plan is responsible. It provides a path that will create construction jobs, generate property tax revenue, and reuse the plant site to generate electricity for years to come.

Alternatively, the closure by removal method would severely diminish the quality of life for residents who live nearby and along the proposed trucking routes. That is unacceptable.

Please reject any pressure to require the plant to close the impoundment by removing the coal ash by truck and through our communities.

Sincerely,

Connie Ahlberg

***Subject line: Proposed Kincaid Power Plant Impoundment Closure Public Comment***

Dear Illinois EPA and Community Relations Officer Barb Lieberoff:

As a locally impacted resident, I strongly urge your Agency to approve the Kincaid Power Plant's plan to responsibly close the coal ash impoundment and reclaim the acres by building a new utility-scale solar investment.

This plan is environmentally responsible and would create good-paying jobs, increase our property tax base that was negatively impacted by the closure of the legacy plant, and generate electricity for years to come.

The economic and environmental benefits of the Kincaid Power Plant's closure plan make it the most sound approach for closing the impoundment and investing in our community.

Please approve the Kincaid Power Plant's impoundment closure plan and reject calls to require closure by removal.

Sincerely,

Eva Hahn
